A JOURNAL DEVOTED TO THE INTERESTS OF THE STATIONERY & FANCY GOODS TRADES

"The Stationer"—Every Thursday—\$2.00 Per Annum.

VOL. X.--NO. 1.

NEW YORK, JULY 7, 1881. 44.659 WHOLE NO. 315.

Correspondence.

PHILADELPHIA NOTES.

[FROM OUR REGULAR CORRESPONDENT.]

PHILADELPHIA OFFICE OF THE LOCKWOOD PRESS,
407 Walnut Street,
PHILADELPHIA, Pa., July 5, 1881.

One of the interesting events of the celebration of July 4 to the book and stationery trade of Philadelphia was the match game of base ball which was played between the clubs representing the employees of A. W. Faber, New York, and J. B. Lippincott & Co., of Philadelphia. The gentlemen of the New York nine with their invited guests arrived in this city at ten o'clock where they were met by a committee consisting of W. N. Kurtz, C. E. Roberts, M. D. Ancker, T. J. Martin, W. S. McQuillen, F. W. Wood, and W. S. Craig, on behalf of the Lippincott nine, and welcomed to the city. They were then driven out to the ball grounds at Fairmount Park, where after a short delay the game was opened, and after a close and most exciting contest, resulted in a victory for the New York club. After the game was over, all proceeded to Strawberry Mansion, Fairmount Park, where the Faber Club was entertained for two hours eating, drinking and toasting, and this time would have been increased had it not been that the nine were obliged to return to New York on the 6:45 P. M. train. The boys were taken on a boat ride down the river and reached the depot in time to take the train mentioned, apparently perfectly satisfied with their visit to the "City of Brotherly Love." Below will be found a complete score of the game:

A. W. Faber's Club, New York.

BOSTON NOTES.

[FROM OUR REGULAR CORRESPONDENT.]

Boston, Mass., July 6, 1881.

The sad event of the week, the assassination of President Garfield, has been the subject of conversation to the exclusion of active business, and the intervention of a holiday, tinged as it was with a deep feeling of peculiar sadness, has interrupted trade to a considerable extent. We have had no more than half a week of fair trade. The hot weather, too, has tended to render a season of dullness.

After the "spurt" in trade of the previous fortnight, a period of inactivity has set in. Dealers expect to do no more than such a volume of business as always characterizes the month of July. Orders are limited to small parcels to meet immediate wants. Reports from the interior are to the effect that goods are in sufficient supply for the season of the year, but that there will be a fair trade during August.

The Christmas specimens of Frang & Co. meet with universal satisfaction and praise wherever they have been shown, and an immense demand is in store for the new goods of this firm. Having entered the field thus early there would seem to be no chance for disappointment among the trade in obtaining the goods.

A few more new summer novelties in the shape of fancy note paper, probably the last of the season, have made their appearance. No well regulated summerer at the seaside or at the mountains can afford to be without this sort of stationery this season.

Loring is likely to make a satisfactory settlement with his creditors and continue business at his new stand. Up-town would be almost lost without "Loring's."

The failures in Boston during the month of June represent a trifle over \$1,000,000, but not a dealer in paper or stationery among the bankrupts.

L.

OHIO NOTES.

[FROM OUR REGULAR CORRESPONDENT.]

DAYTON, O., July 4, 1881.

The news of the terrible tragedy at Washington put an end to all business on Saturday, and the telegraph bulletins were watched anxiously for what was hoped might be favorable news. To-day all business houses are closed, by usual custom, and the day is unusually quiet. We all hope for better news before night.

Trade is quiet. There is no gainsaying that fact; but the outlook is good. Every one says that the fall business must be immense, and I be-

lieve that "everybody" knows more than "any body."

The army of travelers, except for pleasure, is growing beautifully less, although advivals of future visits are plenty. Since my last letter Latham, of the National Blank Book Company, Cameron, of the National Form Company, and Wiborg, of Ault & Wiborg, have made visits to our city, and all are in good spirits over their trade.

J. H. Thomas has moved into a new room, better adapted to the display of wall paper and shades, a branch of business he intends to go into more largely.

Reynolds & Reynolds report trade in their specialties as very good, and they are making great efforts to be ready for the fall trade in time.

C. L. Hawes, at the Aqueduct mills, has started up again. He has put about \$30,000 worth of improvements on his mills, consisting of rotary straw boilers, &c. He tells me that he is now making the best board he ever did. The board is thicker to the number than any he ever made before. Mr. Hawes is always looking out for something to improve his board; and any one who can demonstrate to his satisfaction that he can introduce methods or machinery that will have that effect will find in him a ready listener.

I have not heard of any purchaser for the Mead & Nixon paper mill, to be sold at auction on July 13; but presume so valuable a property will not go begging for a buyer.

The makers of Noiseless slates are again flooding the country with their literature. If the slates make as much noise as the makers of them Pandemonium is not far away.

I found R. A. Rogers busy making out memorandum for purchases East. I believe he leaves this week. He will probably try sea air for a change when East.

J. T. Crane, with Warren, Fuller & Co., is now East getting ready for the winter campaign.

C. E. Conover, of the Holden Manufacturing Company, is on the wing somewhere selling the specialties of the firm. Everybody and everything else are *in statu quo*, whatever that means, in the MIAMI VALLEY.

MALLEABLE BRASS.—This, says the *Berg-u. Huttman Zeitung*, is made by alloying 33 parts of copper, and 25 of zinc, the copper being loosely covered with the zinc, in the crucible. As soon as the copper is melted, zinc purified by sulphur is added. The alloy is then cast into molding sand, in the shape of bars, which are malleable into any form while hot.

A FAMOUS COLLECTION.

Writing of the famous Double collection which has just been sold in Paris, James Jackson Jarvis, under date of May 21, says: "As a collection it is renowned all over Europe for the variety, quality and historical interest, besides the artistic value, of its several departments of objects. These consist of paintings, chiefly of the French school of the last century and older Dutch masters and select specimens of the best workmanship in European and Oriental arms, jewelry, bijoux, miniatures, Saxon, Sèvres and Chinese porcelains, Delft faience, bronzes, clocks, furniture, tapestries, embroideries, marbles; in fine, almost everything that the fastidious taste of a noted collector of ample resources, judging solely for himself, could bring together during the past half century. It is true that there are only about 525 lots; but each either has a history or is distinguished for some particular excellence. Emphatically, it is a sale for amateurs of the effects of a prince of connoisseurs; a type of an æsthetic man whose whole long life was devoted to one sentiment and one sensation. Only Paris could produce such a character. Like the plant which blooms once in a century, it is a human growth that comes to perfection only under rare conditions and at long intervals. In America it may be said to be as yet unknown. Nevertheless, as there are existing germs in our country which before long may develop into fruit of quite as particular or even richer flavor, it will not be out of place for me to describe the highest developed type of the Parisian collector or curiosity-hunter that has as yet appeared in the Old World, in the person of the late Leopold Double, whose collections are now about to be dispersed under the hammer.

"Bric-à-brac has its noble as well as ignoble sides. Leopold Double seems to have been a mixture of both. He was born in 1812, in Paris, of a noble family, and at first destined for the army. While in garrison, for distraction, he began to collect objects of curiosity. This soon grew into so strong a passion that he resigned his commission as an officer of artillery, and installed himself in his little hotel in the Rue Louis le Grand, where he remained until his death. In his youth collectors were comparatively rare; and objects of virtue plentiful and little appreciated. The best things generally were most in disrepute or utterly neglected. Consequently, the time was favorable and his collections augmented rapidly. He did not buy at public sales, but sought things at first hand. By 1850 his hotel had become famous as a museum of choice bric-à-brac even in Paris, and soon after was known all over Europe. It was an epitomized exhibition of the sumptuousness, elegance, and artistic tastes of the best periods of the seventeenth and eighteenth centuries, of whatever was most charming in the households of his luxurious, splendor-loving countrymen in the climax of their worldliness, before the Revolution waked them from their giddy dreams of vainglory to pay the reckoning of their gilded folly and their rapacious magnificence. Everything was brought to him first, and he seldom let escape him what he might never see again. In this way he became the possessor of many interesting souvenirs of Marie Antoinette—royal gifts in Sèvres of Louis XV. and like objects of a historical interest. Among these was the snuffbox of the Empress Catherine of Russia, painted in miniature by Blauberghe, representing the erection of the statue of Peter the Great at St. Petersburg. One day the late Grand Duchess Marie urged him to sell to her at

any price. Double replied: 'Your Highness would not wish me, in giving up a bijou which is an integral part of my collection, to break my solemn oath made to myself never to part with anything from it. But I pray that your Highness may survive me, and then you can acquire the box you so much desire, when I shall not be here to regret it.' A reply worthy both a courtier and a collector. One day, in passing in his carriage on the outskirts of Paris a filthy rag shop, his eye caught the gleam of a bit of fine porcelain. Alighting, he discovered and bought for nothing a coffee set of the electoral manufactory of Meissen intact and beautifully decorated with figures. Again, in traversing the Rue du Sentier he noticed a house in process of demolition. Recollecting that it once belonged to Le Normand d'Etioles, husband of the Marquise de Pompadour, he entered to examine it. Immediately he discovered a beautiful ceiling painted by Boucher, and then and there bought and transferred it to his own house, with two fine fountains by Falconet. It was in this haphazard way chiefly that he made many of his principal acquisitions.

"Double neither would sell nor exchange his objects after they had been thoroughly examined and admitted to the honors of his collection. They became literally the cherished friends of the house, as inalienable as himself. Like himself, the Empress Eugénie had a passionate enthusiasm for relics of Marie Antoinette. She offered him 30,000*fr.* for a pair of bronze-gilt torches by Gouthières, made on the occasion of the birth of the unhappy Dauphin. 'These torches,' he replied, 'only cost me 300*fr.* to 400*fr.* twenty years ago. I will not give them even for a million, estimating them at the value of the pleasure I have in possessing them.' Here spoke out the genuine collector's soul, able and willing to keep what he cherished, despite all mercenary considerations. The agonies he endured during the siege of Paris and the burnings by the Commune lest his treasures should be destroyed may be imagined. Some of the more portable he contrived, at great risk and expense, concealed in dirty linen, to smuggle out of Paris before it was captured. After he had returned, and re-established his possessions, he fell dangerously ill and was given over by his physician. Believing himself near his end, he had brought to his bedside the most cherished of his objects, particularly the well beloved relics of Marie Antoinette, and some of his pictures. Said he, 'I suffer less in looking at them, and it seems to me that I am kept alive by their mystical influence on my body.' Whatever was the cause, the crisis was happily passed. Perhaps it was owing to their moral effect on his spirit in rallying it to a new effort, which gave him a fresh lease of life. At all events, he devoutly called them 'his saviors' to a friend who saw them soon after arranged around his bed aiding his convalescence. His last days were devoted to showing to intelligent amateurs and distinguished people his collection, long after he had given up increasing it by fresh purchases. Artists and ladies of society were constant visitors. All the royal personages who visited Paris in the last fifteen years were also of the number. Almost his last words were, 'My collection must not disappear except with me.' He died suddenly a few days after this and by the time this is read the dispersion will be accomplished.

"A collector of the type and temperament of M. Double is rare anywhere, and possible only in a very advanced civilization. The sincerity of his passion, with his independent means, made him a happy man in the earnest pursuit of his treasures, and the intellectual activity it neces-

sitated a more or less healthy one. Looking to his own immediate gratification, he became useful to the public in searching out, preserving and preparing for higher services to humanity much that otherwise would have been irretrievably lost. As a passion, in principle, this is on the same level as hoarding money, but on a far more intellectual and happy platform for humanity. Better to buy the precious relics and works of our human ancestors, and keep them for solitary gratification than not care for them at all. But far better is it for the refining and elevating of men at large that a collector, in exercising his own tastes, should so dispose of his collections that they shall do the greatest good to the greatest number whenever it is practicable. Kept in circulation by the frequent purchases, sales, or whims of collectors, as is now the fashion in Paris and London, until the most desirable things find their way into public museums, they are as useful an intellectual medium of interchange in one way as coin is in another. Stagnation in either is damaging to the best human interests, as regards the higher planes of civilization. Soon I hope to hear of American Doubles by scores, preparatory to a higher type of æsthetic benefactors to arise in the near future to beautify our land for the good of all."

Appropos of this, it may be mentioned that the wife of an American mining millionaire bought at the Double sale what is known as the Buffon set, a service in Sèvres ware, for which the designs were supplied by the eminent naturalist, and which was called by him a chapter in his natural history. The set is perfect.

FUSION OF METALS BY ELECTRICITY.

M. Imbert describes Siemens' method of fusing large metallic masses by means of electricity. He uses a plumbago crucible, surrounded by a thick refractory wall, the cover being traversed by a carbon rod of twenty millimetres (0.79 inch) diameter. This rod is suspended by one of the arms of a balance beam the other arm carrying a cylinder of soft iron sliding freely in a solenoid and plunging into a liquid, in order to moderate the oscillations which might arise from sudden variations of current. In one experiment 500 grammes (1.102 pounds) were melted into a compact ingot in 4½ minutes. In melting large quantities the electrical method is rather more than twice as costly as the ordinary furnace; but for the fusion of precious or refractory metals, for chemical purposes, and for other applications, where the question of economy is secondary, the new method is very convenient and practical. In melting small quantities it may even prove economical.—*Ann. du Gen. Civ.*

In the course of the excavations necessary for the reconstruction of the baths at Durkheim, in the Palatinate, the workmen have come upon an enormous iron chest, containing the celebrated treasure of the Abbey of Limburg, which disappeared after the siege of the abbey in 1504. The treasure is supposed to have been put in safety by the abbot, out of fear of an attack. It is composed of a large number of vases and other objects of gold and silver, of precious stones and a host of coins of the fifteenth century. There are also a number of articles of worship, dating from the commencement of the abbey, which was constructed by Conrad the Salic and his wife, Queen Gisela, and opened in 1030. By the law of the Palatinate, half the treasure goes to the state and half to the French company which has the working of the baths.

OLD BERKSHIRE MILLS

DALTON, MASS., U. S. A.

One party writes: "The two hundred RECORD BOOKS, for 83 of the 99 Counties, now on exhibition at the Iowa State Fair, at Des Moines; and all, but four (!) of them, made from your 'OLD BERKSHIRE MILLS LINEN LEDGER,' Medium, 40lb., make a splendid show."

MANUFACTURED BY
CARSON & BROWN CO.
DALTON, MASS.

[The above cut is a fac-simile of the wrapper used on the Linen Ledger Paper.]

We will pay for any book rejected on account of fault in the paper. Send for Samples, test them in comparison, and see that your books are made from paper thus water-marked.

SOLE AGENTS FOR THE UNITED STATES OF

Aug. Leonhardi's (Dresden) Celebrated Alizarine Writing
and Copying Ink.

THIS Ink combines the qualities of a Writing and Copying Ink in a manner unsur-
passed by any other make in the market. As a Copying Ink it will make a dis-
tinct copy even several days after, and if required two clear copies can be taken. As
a Writing Ink it excels for its intense blackness. It never fades, nor does it blur. It
is used in all Government Offices on the Continent of Europe.
We are enabled to quote this Ink far below the prices of other Copying Inks.

Publishers of SOUVENIR ALBUMS, of all the larger cities of the Union, of
Places of Summer Resort, and of Celebrated Sceneries.

COMPOSITION BOOKS.

(Copyrighted, June, 1881.)

Something entirely new and attractive for the School Trade. One of the best selling books published. They are printed on our best manila paper, bound in heavy covers with rounded corners. At the head of each page is printed a cut of some simple subject for the children to write about. The name, "*Pretty Stories*," will cause almost every child to want it. The book is recommended by the best primary teachers in the country. FIRST SERIES, 6½ × 8 inches, 24 pages, per 100 books, \$8.00. Put up in packages of 25 books each.

We have added to our *Portfolio Tablets* a line of *Fine Linen Paper*, bound in Leatherette, with stamped covers, very handsome; and also are putting up a new style of Tablet in *Fine White Writing Paper*, bound in ornamental flexible covers, with stiff back, which we call our "*Tourists' Tablets*," in Commercial and Packet Note, and Congress Letter Sizes.

PERFECTED STYLOGRAPHIC.

The original and genuine Pen. Warranted the best made. Thirteen Patents granted to A. T. CROSS, the last, June 20, 1880, being the most important and giving the name **Perfected**. All cuts are exact size.

MAXIMUM.—Holds most ink of any pen made; tires the hand less than smaller barrels. Fits Hambley's Pocket. Same price as Long.

LONG.—The famous Desk Pen. Extra long. Holds most ink, except the Maximum.

SHORT.—Most widely known and sold heretofore; but Maximum and Long are

much better for desk or Hambley's Pocket. So this will be largely superseded.

Thirteen patents granted; seven more applied for; more genuine improvements; better record; more styles; larger stock; more thoroughly protected by patents than all rivals combined.

 See Descriptive Circulars.

GIANT, with Cord and Gold Ring, same price as Short.

Dealers and agents supplied with wood, glass and paper signs, placards, circulars, leaflets and cuts. We make both largest and smallest Pens, all of which will have the new improvements.

 See Descriptive Circulars.

LITTLE GIANT, Plain, - \$3.00.

All Styles up to \$4.50.

L. PRANG & CO.'S

Christmas and New Year Cards

ANNOUNCEMENT.

WE hereby beg leave to announce to the trade the completion of our line of Christmas and New Year Cards for this season, for which our agents are now soliciting orders. The extent of our list, the originality, and especially the American character of our designs, together with the great care taken in their execution, will, we have no doubt, secure for our goods the popularity which they have enjoyed heretofore. The efforts we have made to secure the highest excellence, is attested by the names of some of the artists whose designs have been reproduced. We would only name Elihu Vedder, C. C. Coleman, Thomas Moran, Miss Rosina Emmett, Miss Dora Wheeler, Mrs. O. E. Whitney, W. H. Gibson, F. S. Church, R. G. Birch, &c. That a due regard has been paid for the quality of the literary matter, in connection with these designs, is shown by the fact that many of the designs are accompanied by original poems from writers of note, such as Mrs. Celia Thaxter and Mrs. Emily Shaw Forman.

The great increase of our manufacturing facilities, secured by additions to our building nearly doubling our floor space and by the adding of new machinery, will place us in a position to fill orders promptly. Still we would request dealers to place their orders as early as possible, so as to still further enable us to make timely preparation for prompt deliveries.

Our Cards will, as heretofore, be put up in envelopes containing twelve Cards, unless otherwise stated on our price lists.

We furnish envelopes without extra charge for all our Christmas and New Year Cards, for which the list price is \$1.80 per set, and over. Our silk-fringed Cards will no doubt be in great demand this season. We have made ample preparation to furnish these in time and have made arrangements with our manufacturers for the best quality of silk fringes. We would call special attention to the excellence of our fringed Cards and the novelties in colors and style of fringes we offer for this season.

A marked and attractive feature of our cards are the elegantly ornamented backs.

All our fringed Christmas and New Year Cards are furnished with envelopes and protectors, so as to insure safe transportation in the mails.

It will be impossible to embody our whole list in the space of the advertisement, and we will therefore merely give a general outline of the variety offered.

PRANG'S PRIZE CHRISTMAS CARDS.

COMPETITION OF 1881.

These are the Cards selected by the judges in the second competition for four designs of Christmas Cards, for which we offered \$2,000 in prizes of \$1,000, \$500, \$300 and \$200 respectively. At the recommendation of the judges, Messrs. COLEMAN, LAFARGE, and WHITE, the prize for third best Card was increased to \$500. Mrs. CELIA THAXTER has written appropriate verses for each of the designs.

- 1st Prize Card (\$1,000), by Elihu Vedder. Size, $6\frac{1}{4} \times 9$ inches; price \$1 each. Same card with silk fringe, cord and tassels, price \$1.50 each.
 2d Prize Card (\$500), by Miss Dora Wheeler. Size, 7×9 inches; price 75c. each. Same card with silk fringe, cord and tassels, price \$1.25 each.
 3d Prize Card (\$500), by C. C. Coleman. Size, 7×9 inches; price 75c. each. Same card with silk fringe, cord and tassels, price \$1.25 each.
 4th Prize Card (\$200), by Miss Rosina Emmett. Size, $5\frac{1}{4} \times 9\frac{1}{4}$ inches; price 60c. each. Same card with silk fringe, cord and tassels, price \$1 each.

The Prize Cards can also be had mounted on heavy board with gilt beveled edges.

We beg to call attention also to the following publications for New Year and Christmas:

- "Goddess Fortune" New Year Card, by Elihu Vedder. Size, $6\frac{3}{4} \times 8\frac{3}{4}$ inches; price 75c. each. Same card with silk fringe, cord and tassels, price \$1.25 each.
 "Christmas Dove," Size, $7 \times 9\frac{1}{4}$. This card is in the same style as the success of the last Easter season, the "Easter Dove," price 60c. each. Same card with silk fringe, cord and tassels, price \$1 each.

Our Regular Line of Christmas Cards consists, among others, of the following Series:

- | | |
|---|--|
| Nos. 901, 902, 903, 906, 909, 910. Floral designs ranging in price from 20c. to \$1.20 per set of 12. | Nos. 920 and 929. Children's designs, at \$2.40 and \$3.60 per set. |
| Nos. 904, 905. Humorous Cat and Frog Designs, 60c. per set. | No. 922. Shells of Ocean, with figures, \$2.40 per set. |
| No. 907 is a new series of Horseshoe designs, 75c. per set. | No. 924. Fans with silk fringes, \$3 per set. |
| | No. 933. Bric-a-Brac designs, very rich, \$6 per set, and many others. |

We offer a similar assortment of New Year Cards, but would call special attention to No. 1330, a new folding calendar, at \$2.40 per set. Most of the Numbers can be had with silk fringes ranging in price from \$2.25 to \$12 per set. Stock will be ready for delivery September 15.

Besides the above, attention is called to our New Birthday Cards, Scripture Texts Cards, New Panels, New Water Colors, by Thomas Moran, and other publications. Our line of Thanksgiving Day Cards will also be shown by our agents.

REGULAR DISCOUNT TO THE TRADE. PRICE LISTS AND CATALOGUES SENT ON APPLICATION.

Trade Gossip.

All new goods and designs which are not, strictly speaking, "Novelties" will be noticed under this head. The trade are requested to forward descriptions with samples in order to secure proper notice.

The *Evening News* Company, Sedalia, Mo., has failed.

Agnes C. Harris, stationer, &c., Ortonville, Mo., has sold out.

L. T. Patterson, fancy goods dealer, Portland, Ore., has been burned out.

Perrine & Johnston, news dealers, St. Petersburg, Pa., have sold out to H. P. Clark.

S. W. Ravenol, publisher of the *Advertiser*, Boonville, Mo., has sold out to J. H. Hawley.

The arrival of W. H. Coyle, Houston, Texas, was looked for during the first part of the week.

James H. Atkinson, printer, Newport, R. I., has admitted Thomas E. Ash, Jr., to partnership.

Salisbury & Humphries, booksellers and stationers, Coburg, Ont., Can., have been succeeded by Salisbury & Son.

H. H. Polachek, dealer in notions, Waukesha, Wis., has had his stock attached, and is advertised to be sold out by the sheriff.

The business of J. Gladding & Son, manufacturers of blank books, Philadelphia, Pa., has been sold to C. H. Sherman & Co.

Hubbard Brothers, book publishers, Philadelphia, Pa., have dissolved partnership. Alfred H. Hubbard continues under old style.

J. C. Stuart & Co., wholesale dealers in stationery, wall paper, &c., Toronto, Ont., Can., have dissolved partnership. Henderson, Mullin & Co. succeed.

The Ontario Lithographing and Engraving Company (not incorporated), London, Ont., Can., has sold out to the London *Free Press* Printing and Publishing Company.

William P. Raynor, of Samuel Raynor & Co., returned home this week from his trip to Europe looking extremely well, after having passed a very pleasant time.

George E. Lane, bookseller and stationer, Exeter, N. H., has associated James D. Batchelder in his business, and the style of the firm is now George E. Lane & Co. Both members of the firm are highly spoken of in the local press.

Ziegler & Swearington, importers and wholesale dealers in notions, Philadelphia, Pa., have dissolved partnership. Edward S. Ziegler as general partner and Charles Ziegler as special partner will continue under the style of Edward S. Ziegler & Co.

William D. Axtell and W. M. Pomeroy formed a copartnership on July 1, under the style of Axtell & Pomeroy, for the purpose of publishing the *Berkshire County Eagle*, and carrying on the printing and bookbinding business formerly conducted by Chickering & Axtell.

The new line of elegantly embossed and illuminated designs in papeteries just shown to the trade by J. D. Whitmore & Co. are not surpassed by any similar goods ever on the market. All of the designs are original, sparkling and attractive, nicely boxed, and no pains have been or will be spared to make it the best selling line for fall and holiday trade. Several designs are shown, specially gotten up for children's use. The line of cheaper papeteries also contains a variety of quaint new designs.

John Gibson & Co., New York, have put in a new press, with all of the latest improvements. They have enlarged their premises down stairs and have taken an upper floor for stock and shipping room. Their office and sample room have also been remodeled, making a pleasant and commodious establishment. The firm reports business brisk. It is getting up new specialties in Sunday school and advertising cards. Messrs. Aikenhead, Schmook and Thomas are now busy getting ready their samples for the fall trade. They hope to start out early in July with a handsome line of Christmas and New Year's cards. The firm is running a very fine line of imported valentines. Samples will be ready in a few days.

Taste in the matter of menus, guest cards, favors, &c., of late is not to be measured by the price per dozen or hundred. It is the thoroughly tasty, neat and original designs, gotten up for such uses that are in most demand. J. D. Whitmore & Co. are showing a very complete line of these goods in all varieties of fringes, satins, and hand-painted work, &c., and new designs are being constantly added. This house is also prepared at all times to design specially for any occasion.

At fire at Biddeford, Me., early on Sunday morning, totally destroyed the Printers' Exchange building on Main street. The loss on the building is \$20,000; insured for \$9,000. The first floor was occupied among others by the *Daily Evening Times* and the *Weekly Times* printing office. Loss on the *Times* office, \$6,000; partly insured. The fire was caused by the explosion of a lamp left burning in the shoe factory.

Stafford's universal ink which is a jet black writing fluid is having a very extraordinary sale not only in this country but in England and is rapidly becoming the favorite ink. The manufacturer, S. S. Stafford, 218 Pearl street, reports more orders than he can conveniently fill.

Mr. Maxwell, of Maxwell & Co., Bloomington, Ill.; E. C. Palmer, of E. C. Palmer & Co., New Orleans; Edward Perry, Charleston, S. C.; Allen C. Kerr, of Allen C. Kerr & Co., Pittsburg, Pa., were among the visiting members of the trade in the city this week.

The following named firms in Minneapolis, Minn., have been burned out: Hunig & Knickerbocker, printers; loss, \$4,000, insured, \$4,200. Willard & Casseday, printers; loss \$1,000, no insurance, and C. E. Young, printer; loss \$500, insured \$1,500.

E. C. Palmer, of New Orleans, is visiting the city this week on his way to Cape Cod, where he has a country seat. He thinks the prospects for business in Louisiana and Texas this coming winter are very good.

Fuller, Ward & Co. and W. W. Fuller, printers, of Providence, R. I., have made an assignment to E. K. Glezen, of No. 4 Market square, Providence.

Rosenzweig & Schoettle, paper box manufacturers, Philadelphia, Pa., have dissolved partnership. Herman Rosenzweig continues.

The Removable Blankbook Cover Company, of Cincinnati, Ohio, has been incorporated, with authorized capital of \$50,000.

The St. Thomas *Home Journal* Company (not incorporated), St. Thomas, Ont., Can., has sold out.

Dutton & Withington, wholesale stationers, San Francisco, Cal., have dissolved partnership.

The stock of Mrs. F. H. Dibble, fancy goods dealer, Elyria, Ohio, has been attached.

Julian & McNanima, publishers, Oakland, Iowa, have sold out.

H. W. Hasselgreen, printer, Tombstone, Arizona, has been burned out.

Roesch & Knopf, printers, San Francisco, Cal., have dissolved partnership.

Mrs. F. H. Dibble, dealer in fancy goods, Elyria, Ohio, is offering to compromise.

G. A. Tanner & Co. have succeeded Rouseup & Tanner, publishers of the *Daily News*, Ann Arbor, Mich.

Chickering & Axtell, printers, Pittsfield, Mass., have dissolved partnership. Axtell & Pomeroy continue.

James Buckley, stationer, New Orleans, La., has admitted John L. Pickrell to partnership under the style of James Buckley & Co.

The picture frame factory of Farmingdale, L. I., owned by B. Levine, was burned Thursday night. Loss, \$8,000; no insurance. The fire was of incendiary origin.

Max Griebel, of L. Prang & Co., stated in a communication received from him this week, that he intends to leave Hamburg for New York on July 27, per steamer Wieland.

Among the visiting members of the trade to the city during the week were: Amos Pettibone, of Culver, Page, Hoyne & Co., Chicago, and D. L. Davis, of Bailey, Banks & Biddle, Philadelphia.

O. H. Greenleaf, president of the Holyoke Paper Company, arrived safely at Liverpool a week or ten days ago on his way for a trip over the Continent. He will be gone until about September 1.

The line of stationery M. A. Reay will offer to the trade during the fall season will be unusually fine. It will include Lowell's elegant steel plate Christmas cards. Samples of the fall line will be displayed by B. E. Pike on his great fall trip.

John Glenn, representing Marcus Ward & Co., was in town during the past two weeks with samples of this firm's productions. These include Xmas and New Year's cards, calendars, stationery, &c. Three designs of the calendars in particular are very beautiful—viz., Sacred, Shakesperian and Every Day. Xmas cards comprise almost every variety and style. Among them are some in imitation of the new style of hand-painting on granite ground and now so popular in London. There are also several series of the new ecclesiastical style, both in plain cards and triptychs. The ribbon book is a neat card. It is in sunk mounts, and has handsomely illuminated pages, and is called a "Souvenir for the Season." Among others, is a handsome series from Kate Greenaway's designs, which consist of three quaint figures in her inimitable style. This artist's designs are also produced on the firm's season's calendar, which is by far the finest of the kind it has yet brought out. Among other goods are those numbered 227 and 679. The former is a series of four cards, representing old-fashioned blue square China plates, with flowers and blank cards lying upon them. No. 629 is the new Shakesperian card, which consists of four designs, each having appropriate quotations. The whole series for the season is most complete, as may be seen by inspection. In stationery, the royal Irish linen paper, of world wide reputation, is presented in new and beautiful wrappers and boxes. In scrap books and photograph albums the firm has many new and elegant designs, among them being a new floral album, "Flower and Field," and which the house considers the handsomest album ever presented to

the trade. In future issues of THE STATIONER more details of these goods will be given.

In every branch of the trade great preparations are being made for the fall season.

James Kions, dealer in notions, Fairmount, Mo., has sold out to Charles Gurtin.

D. P. White, of White & Floyd, printers, Utica, N. Y., is dead.

Almost all of the merchants who were in Europe purchasing for the fall season have returned.

Powers & Kennedy, publishers, Villisca, Iowa, have dissolved partnership. C. W. Kennedy continues.

James H. Hallett, of the firm of James H. Hallett & Co., manufacturers of paper bags, Boston, Mass., is dead.

A. J. Pulsford, representative of De La Rue & Co., is at present in town, where he will remain for the next ten days.

J. J. & S. P. Richards, booksellers and stationers, Atlanta, Ga., have dissolved partnership. S. P. Richards succeeds.

James D. Whitmore & Co. have largely increased their room for manufacturing, and have in the last two weeks put in considerable new and improved machinery.

The Holyoke Envelope Company is very busy at present, and is turning out some very elegant goods. James D. Whitmore & Co. have the sale of its goods in New York.

A contract was recently awarded by the Quartermaster's Department for envelopes and, notwithstanding several stationers put in bids for other makes, Raynor's envelopes secured the award.

W. A. H. Stafford recently returned home with his family from a trip to the continent of Europe, where he had been gone over two months. He reports that the largest stationery house in London is now selling Stafford inks exclusively.

R. Fideau, 16 Beekman street, with the object of reducing his large stock of cotton hammocks, offers to the trade on all orders from this date an extra allowance of ten per cent. Mr. Fideau has lately received and is filling quite a number of large orders for school slates for the export and domestic trade. He has so many orders on hand for his "Unparalleled" school bags, that he will be unable to fill all of them during this month.

Charles S. Plummer returned this week from a short trip through the East, and to use his own words "did a smashing good trade." He starts up through Canada this week. Mr. Plummer has a curiosity in the way of a Mexican horned toad, which eats flies and wags his tail in satisfaction. Mr. Plummer will soon bring out two new songs, entitled "My Love" and "Man Was Made to Mourn," to be published by John F. Perry & Co., Boston.

J. H. Hamburger is now preparing his new line of combination and folding cards, and will be ready to show it by July 15. Mr. Hamburger is at present in Europe, from where he has recently written that he will astonish the trade this season with some startling novelties. This house claims to carry the largest and best selected line of cards in this country, and thus far has more than doubled its sales in comparison with former years. Samples of new relief pictures for the coming season can already be seen at the firm's salesrooms, No. 324 Broadway, where orders forwarded will be promptly attended to.

THE STATIONER.

DEVOTED TO THE INTERESTS OF THE

Stationery and Fancy Goods Trades.

WEEKLY--\$2.00 PER ANNUM.

Single Copies - - - 10 Cents.

NEW YORK, THURSDAY, JULY 7, 1881.

Advertisements cannot be received for insertion in the current week later than 12 M. on Wednesday. The charge for advertising is 25 cents a line, each insertion. Special terms for standing and displayed advertisements to be had on application.

This journal aims to be a medium of information for and a representative of the interests of every one connected with the stationery and fancy goods trades. It contains a full and trustworthy survey of the market for stationery in this country, in all cases giving the actual prices at which goods can be bought of importers and jobbers in this city, together with a detailed account of novelties in the trade, patents relating to stationery, and current items of interest. A review of foreign markets and accounts of movements abroad will also be furnished, and no pains will be spared to make THE STATIONER a thorough and complete exponent of the trade.

Subscription and postage for Great Britain, per annum..... 12s.

Any information our readers may wish to obtain shall be cheerfully given, and prompt replies will be made to all inquiries addressed to us on any subjects of interest to the trade.

Communications on all trade matters are earnestly solicited. Address

HOWARD LOCKWOOD, Pres. and Treas.

Subscribers to THE STATIONER can be supplied with the best cloth binder in the market. Deliverable at the publication office. Price, fifty cents.

Readers of this paper who avail themselves of the information obtained from its columns, by advertisement or otherwise, are requested to notify their correspondents of the source of their information.

VERY little is to be said of or for trade during the past week. Events which have disturbed the public mind, the national holiday and then the advent of what is certainly seasonable if uncomfortably warm weather, have combined to make it an off week in trade.

EVERYBODY who can get into it is in the card trade. As we write we can look across the street and see busy hands at work making up the fringes and setting off the designs which are to win the dimes from every purse, however reluctant. We hope that this card fancy will not die out. We do not think that it will, but fear lest taste may go to the extreme, which will make designers crazy. There is one thing which the trade must bear in mind. That is, to frown down the sale of cheap goods, which are cheap only because they are too vulgar in design, too common in finish, and too poor in execution to be anything else but cheap. We say this as much in the interest of trade as of art.

THERE is no need to recount the incidents of the dreadful deed of murder with which the people of this country have been shocked within a week. The horror at the attempted assassination of the President and the shudder of detestation which followed the murderous act show plainly that the sympathy of the country, without distinction of parties, classes or individuals, is with the victim of the crime, and prove that the moral sense as well as the political feeling of the entire community has been painfully affected. What might have been the outcome had this act of Cain succeeded we do not care just now to consider. The country has lived and will continue to live even when stricken a desperate blow in the violation of the person of its Chief Magistrate. We rejoice to know that the attempt of the assassin was futile, and even the President, in the midst of his suffering, may be able to realize that there is a bright crown of martyrdom in the spontaneous expression of national and unified feeling which this event has called forth.

CUBA is buying more largely of American manufactures and in a late report from our Consul at Matanzas we are told that among the goods which find increasing sale in the island is "stationery of all sorts." We invite the attention of our manufacturing stationers to the fact that Cuba is near at hand, easy of access, and that she is disposed to take goods made in this country. There will be a chance for some of our enterprising commercial travelers to work up a little trade in this direction, and, indeed, in other Spanish-speaking countries. With the readier communication to the interior of Mexico now in prospect there will be a further opportunity of extending trade. Central America will enlarge this chance. As a matter of business foresight, it will be profitable for some of our energetic young stationers to study the Spanish language.

Let us look after this export trade a little closer. We are told that the rush of trade at home has made our merchants indifferent to taking foreign orders. This is a great mistake. Keep up your connections abroad; increase them if possible, and do not let the trade be caught up by foreign houses.

OBITUARY.

ALFRED DUPONT JESSUP.

A dispatch from London, dated July 5, announces the death of A. D. Jessup, late of the well known paper firm of Jessup & Moore. His death was caused by apoplexy.

Mr. Jessup was born on June 20, 1826, in Westfield, Mass. His father founded the well known paper manufacturing firm of Jessup & Moore, at Philadelphia, in 1843, and a branch office was established at No. 128 William street, in this city, in 1865. During his youth Mr. Jessup entered a lawyer's office in Philadelphia, but soon after took a position in his father's office. After his father retired from business he was for several years the head of the firm. He retired from the firm in 1871, but continued to own a paper mill at York, Pa. At the time of his death he was a member of the publishing firm of Cowperthwait & Co., of Philadelphia. He was a large holder of railway stock, also, and his estate is estimated to be worth about \$6,000,000. After retiring from business Mr. Jessup spent most of his time in traveling, crossing the Atlantic twenty-seven times and once making a tour of the world. He formerly owned the Bareda villa at Newport, R. I. He spent his winters of late years at Rome and his summers at Westwood Park, Droitwich, England, where he died. Mr. Jessup recently gave a plot of ground at Westfield for an Episcopal church. He also furnished most of the money for building the church, in which there is a memorial window to his wife. Last winter he gave a memorial redos to an American Episcopal church in Rome. Mr. Jessup's wife died fifteen years ago. He leaves a son and two daughters.

JAPANESE BRONZES.

The *Japan Weekly Mail* says: "There is at present living in Kioto an artisan by name Zoroku. He is by some accounted the most skillful, by all one of the most skillful, workers in metal Japan has ever possessed. His specialty is inlaying with silver and gold, an art which he carries to such perfection that his pieces are scarcely distinguishable from the *chef d'œuvres* of the Min period. What one sees on going into his *atelier* is a very old man, some sixty-five or seventy, peering through a pair of huge horn spectacles at a tiny incense burner, or still tinier flower vase, from whose frets and diapers he is paring away, with marvelous patience, an almost imperceptible roughness or excrescence. Beside him, winter and summer alike, stands a brazier with a slow charcoal fire, over which an iron netting supports one or two bronze vessels similar to that he holds in his hand. Plainly, these bronzes are being subjected to a slow process of baking; and if you watch for a moment, marveling at the purpose of a proceeding which seems only calculated to mar the fair surface of the metal, you shall presently see the old man dip a feather into a vessel filled with a greenish liquid, and touch the heated bronze here and there with the most delicate and dexterous care. This liquid is acetate of copper, and this patient process, which you see repeated perhaps twenty or thirty times during a visit of twice as many minutes, will be continued in the same untiring fashion for half a year to come, after which a month's rubbing and polishing will turn out a bronze rich in green and russet tints that might, and indeed must you would fancy, have been produced by centuries of slowly toiling time. This is an example of what goes on, more or less, all through the trade, with, however, one important distinction, that, whereas Zoroku's work is honestly excellent and, bearing his name, is not intended to deceive, but merely to imitate, that of his *confrères* is generally of the most inferior description, and owes a great deal of its apparent antiquity to technical defects. In fact, the quality test, if carefully applied, is even more reliable in the case of bronze than of porcelain."

The favorable prices at which the Post Office Department recently awarded the contract for furnishing postal cards have attracted the attention of the Canadian postal authorities, who have addressed inquiries to Washington upon the subject.

A letter postmarked at Sandy Creek, N. Y., on July 5, and addressed to "Any Envelope Manufacturer in New York City," was put in Samuel Raynor & Co.'s box by the post office officials. The inference to be drawn from this, it is presumed, is that this firm monopolizes the thoughts of the post office clerks.

A watchmaker in Newcastle, Pa., has completed a set of three gold shirt studs, in one of which is a watch that keeps excellent time, the dial being about three-eighths of an inch in diameter. The three studs are connected by a strip of silver inside the shirt bosom, and the watch contained in the middle stud is wound up by turning the stud above, and the hands are set by turning the one below. But perhaps the most remarkable thing about the Lilliputian machine is that it works with a pendulum, like a clock, and the pendulum will act with ease and accuracy in whatever position the time-piece is placed, even if it be turned upside down.

PORCELAIN PAINTING.

The sixth annual exhibition of paintings on china by lady amateurs and artists, now on view at Messrs. Howell and James' art galleries, Regent street, displays marked improvement on those which have preceded it. Both artists and amateurs have made great advance in the art of painting on various kinds of pottery, and the larger and broader style of treatment is gradually displacing the very delicate, if sometimes feeble, work of the miniature painter. Numerous prizes given by the royal patrons—the Crown Princess of Germany, the Duke of Hesse, the Princess Christian, the Prince Leopold, the Duchess of Teck, the Countess of Flanders, and the Grand Duchess of Mecklenburg-Strelitz—as well as by the *Queen* newspaper, the *Art Journal*, by Messrs. Hancock, of Worcester, and Messrs. Howell and James, have been awarded this year by H. Stacy Marks, R. A., and F. Goodall, R. A., who have officiated as judges.

Some idea of the growth of the taste for painting on porcelain will be gathered from the fact that from a hundred and odd specimens sent in for competition six years ago, the catalogue has gradually grown to include more than two thousand exhibits. The Crown Princess of Germany's prize for professionals has fallen this year to Miss Florence Lewis for three fine pieces of flower painting—chrysanthemums, and gladiolas with jessamine. The Crown Princess' prize for amateurs has been won by Miss Lucy Whitaker with a panel painted with conventional wild roses against a background of wattled diaper—a severely artistic design, admirably executed. The "Princess Alice" badge, presented by the Grand Duke of Hesse, is also a double prize for professionals and amateurs. Miss Charlotte H. Spiers takes the professional prize with "A Daughter of the South," a vigorously painted head, and another charming female face, "Among the Flowers;" and the amateur badge is very handsomely won by Lady Hood, whose "Linwood," and portraits of Miss Mabel Hood and Miss Dorothy Hood are almost worthy of Mr. Caldecott in their neatly outlined, simple character, full of the charm of dainty rusticity. Miss Rebecca Coleman's "Morning Glory" and exquisite "Fishermidens," will merit the prize given by the *Queen* newspaper for professional artists; and Miss Crombie wins the amateur prize given by the same journal with "Nasturtiums and Lilies" and "Rhododendrons." Prince Leopold's prize falls to Mrs. E. J. Smith, with "Orchids;" Princess Christian's to Miss Everett Green; that given by the Grand Duchess of Mecklenburg-Strelitz, to Miss Marion Gemmell; and the Judges' prize for landscape to Miss Linnie Watt. Mrs. Swain wins the Countess of Flanders' prize with a panel painted with sunflowers; and Mrs. George Purdie is successful with a pair of door plates decorated with honeysuckle. Miss Ellen Welby and Kirkman are also prize winners. Among the highly commended are Mrs. Mallam, who sends a panel with a charming female figure, Miss Alice Willey for a Japanese design of considerable merit, and Mrs. Collins for "Summer." Miss Bovill has well earned commendation for her "Normandy Peasant Girl," treated in the most effective manner possible on porcelain. The Countess of Flanders contributes "Spring," painted by herself after Kaubach; Miss Burnett sends some excellent "White Lilac;" Lady Julia Wombwell very fine "Autumn Tints," and Mrs. Courtenay Edmonds two beautiful panels, "Summer" and "Autumn." In addition to the strictly qualified competitors several artists send work of a high character.

Conspicuous among these are G. Leonce, with "Apples and Birds," and "Wallflowers and Blossoms;" N. Laford with "Love among the Roses;" E. Quost with a delightful bit of still life; and G. Gautier with a sea-piece. It is also expected that Mr. McDowell's terra-cotta busts of the Prince and Princess of Wales will shortly be ready for exhibition. In one of their new galleries Howell & James exhibit several pieces of "Barum ware," a new product of English art industry which has grown up near Barnstaple. This effective pottery is thoroughly original in method and style, and the quaint designs, executed mainly in dark green and lighthouse blue, are singularly cool and reposeful to the eye.—*London Daily News*.

It is a great misfortune not to have enough wit to speak well, or not judgment to keep silent.

Market Review.

OFFICE OF THE AMERICAN STATIONER.
WEDNESDAY, July 6, 1881.

THE MONEY MARKET.—The local money market maintains the same plethora and ease as noted in recent issues, the rates of interest varying from $\frac{3}{4}$ to $\frac{4}{5}$ per cent., as to collateral. The stock market since last Friday has been very quiet, owing to the recurrence of the national holiday, the attempted assassination of the President, and the absence of many prominent operators from the street. Prices have shown some weakness both for stocks and bonds. The market, however, closed firm on the strength of more favorable advices from Washington in regard to President Garfield's condition. The market for foreign exchange was not at all active. Some of the drawers advanced their posted rates for bills on London to \$4.85 and \$4.87, but a majority of the prime drawers kept their posted rates at \$4.84 $\frac{1}{2}$ and \$4.86 $\frac{1}{2}$. The actual rates for a Continental exchange are as follows: Francs, \$5.23 $\frac{1}{4}$ to \$5.23 $\frac{1}{2}$ for sixty days, and \$5.20 to \$5.19 $\frac{1}{2}$ for demand; marks, 94 $\frac{1}{4}$ to 94c, and 94 $\frac{3}{4}$ to 94c, and guilders, 40 and 40 $\frac{1}{4}$ c.

THE PAPER MARKET.—Manufacturers have yet little to complain of; but if they should have an abundance of water during the next sixty days, nothing but a special dispensation of Providence can prevent prices of some grades reaching even lower figures than they did in the summer of 1879. There seems to be a feeling among many of the publishing houses and other large buyers that prices have about reached their lowest point, and we hear of several manufacturers of book paper taking orders for delivery in the fall, and this movement is likely to be, come even more extended. Although seemingly very low prices are named on news, when the quality is considered, in most cases, the cost will be found to be dear. Manillas are about the only grade in the whole list which has any tendency toward an advance in prices. We hear of two manufacturers who have put up their prices $\frac{1}{4}$ c. We understand that the figure at which the contract was renewed for the supply of news to the *Herald* is about 7c. The straw wrapping mills shut down on Friday of last week and will remain closed during this month, in accordance with the action taken at the last meeting.

THE STATIONERY MARKET.—Last Saturday having been observed to some extent as a half holiday, Monday having been a close holiday, and the excessive heat having driven a great many of the trade out of town, the effect has been to reduce business this week to very small proportions. It is very natural for out-of-town dealers to beat their homes on the National holiday, hence there is no disappointment in seeing such a limited number of them in the city this week. It is likely that we shall have quite a number of Western and Southern buyers in town next week, which will mark the beginning of the fall season. The results of the first half of the calendar year, so far as they have been arrived at, turn out to have been better than many had expected, and the outlook is promising of still better results during the last half of the year. Some of the houses in the fancy goods line appear to be doing already a very good trade, and feel highly encouraged at its beginning so early. No changes have been reported in prices.

EMINENT PRINTERS.

Ulric Zell is frequently mentioned in the controversies relating to the origin of printing, on account of the direct testimony he furnished in regard to some of the facts involved.

He was born at Hanau, the capital of the ancient county of the name of Veteravia. The first pursuit he followed was that of a copyist or calligrapher, in the diocese of Mayence. About this time, printing having been invented, he was taught the new art by John Faust and Peter Schoeffer, and became a celebrated printer of the fifteenth century.

The type which he at first used—when he established a printing office in Cologne—was almost entirely like Schoeffer's; and as the works which issued from his presses did not bear any inscription, they were, for a long time, ascribed to Schoeffer; though there are a number of small works, without date or name of printer, which the biographers have since claimed as Ulric Zell's.

Mattaire, Koehler, Schelhorn, Prosper, Mauhand, and other bibliographers do not know the time when Zell commenced the practice of the art.

A little book, entitled, "Liber de Singularitate Clericorum," with the date 1467, is cited, by the Abbé Rive, Mercier de Saint-Léger, and Père Laire, as the first production of this printer. But, since that opinion was given, there has been found another little book with the inscription of this artist, and dated 1466: "Sancti Joannis Chrysostomi super Psalmo Quinquagesimo." A copy, in 1811, sold in Paris for 364 francs.

In inscribing his name to a book printed by him: "Commentarium in Sex Tractatus Petri Hispani," and published at Cologne in 1492, Zell took the title of "Protocharagmaticus," which the learned C. de la Serna Santander, in the first volume (p. 159) of his "Dictionnaire Bibliographique Chori du Quinzième Siècle," renders as "first printer and type founder (premier typographe et graveur de caractères.)"

This, however, is a self-assumed and not correct title. We have seen that he learned printing from Peter Schoeffer, the son-in-law of Faust, and the associate of Faust and Gutenberg, who founded his own type, and is believed to have brought the art—in its infancy—to such an advanced state that for centuries no important improvements were made. Here it may be observed that some—and perhaps all—of the early punches were cut in copper and struck in lead, instead of being cut on steel and struck in copper, as at the present day. What Ulric Zell could have said of himself with propriety is, that he was one of the first printers and one of the first type founders; for the first printers were always their own type founders as they were also their own bookbinders, as the business of printing originally included every process, from the cutting of a punch to the binding of a book.

The undisputed merit of Ulric Zell is that he was the first printer of Cologne.

The dates of his birth and death are unknown; but he was still practicing his art in 1499, according to the old Chronicle of Cologne, which records his testimony to the time of the invention of printing, which he fixes in the year 1440. The passage has been transcribed in Latin and in Dutch, by Gerard Meerman, in his "Origines Typographice (vol. ii., pp. 105-8).

As Ulric Zell was probably personally acquainted with the facts of the case, it may be interesting to reproduce the statement which he made in the Cologne Chronicle of 1499, and as given by Meerman:

"So this most esteemed art was first invented

in Germany, at Mayence on the Rhine; and it confers a great honor on the German nation that men of such genius were found in it. Now this happened in the year of our Lord MCCCCXL; and, from that time until the year L, the art and what belongs to it were rendered more perfect. Then in the year of our Lord MCCCCL, which was a jubilee year, men began to print, and the first book which came from the press was a Latin Bible, and it was printed in larger letters than those in which it is now the custom to print missals. But though the art had its origin, as we have said, at Mayence, in the manner in which it is now commonly used, yet its first foreshadowing" (prima tamen ejus præfiguratio) "was found in Holland, as is shown in the Donatuses, which were printed there before that time; and from them and out of them was derived the commencement of the above-mentioned art; and just as this latter invention is much more excellent and much finer" (multo præstantior ac subtilior) "than the former one, so has it been made more and more beautiful" (magis magisque excultior).

From this liberal rendering of what Ulric Zell wrote, one would think there ought to be no controversy about the origin of printing. The allusion to the "præfiguratio," or "foreshadowing" of printing in Holland, in the "Donatuses," is to the Donatus printed by Laurence Koster, of Haarlem, and giving every evidence of being a block-book, or species of wood engraving, and the first book—the Latin Bible, printed in larger type than used in his (Koster's) day in mass books—is the Mazarin Bible, printed by Gutenberg, of Mayence, and which was the first book produced "in the manner in which the art is now commonly practiced," namely, by movable types.

A thermometer for indicating the temperature at a distant place by means of electricity has been devised by J. Hicks, of Hatton Garden. A series of platinum contact wires are fused into the stem, at equal intervals of 3° Fahrenheit, for any range of scale which may be desired. The bore of the tube above the mercury column, and a bulb at the top of the stem, are partly filled with glycerine. A platinum wire, fused into the mercury bulb, is connected to one pole of a voltaic battery, the other pole of which is connected to "earth." If, now, we suppose a wire in circuit with an electric bell and "earth," to be rapidly drawn across the contact wires fused into the stem, the bell will ring if the circuit be completed by the mercury column. If, however, the column has not risen sufficiently high for this, the bell will remain silent. This passage of the bell wire over the series of platinum contacts is effected by means of a dial and a revolving arm. The contacts are connected to a row of studs around the rim of the dial, and the bell to the arm, which revolves by clockwork. As soon as an observation of temperature is required the arm is started, and, passing rapidly in succession over the studs, the bell indicates what stud the mercury column has failed to reach, and hence the temperature.

Stratena, whose wonderful powers are so frequently exhibited upon the streets, is probably only the old Armenian cement. This is so strong that it will hold jewels in place, and is used for this purpose by the Armenian jewelers, who merely flatten the settings of their precious stones and then stick them in place upon the metal with this cement. It is made by dissolving isinglass in alcohol, along with gum ammoniac. When well made it is perfectly transparent.

BRADSTREET'S

A JOURNAL OF

Trade, Finance and Political Economy.

THIS JOURNAL covers a ground the extent of which is occupied by no other publication, and forms an invaluable work of reference to the merchant and manufacturer.

REGULAR AND TRUSTWORTHY CORRESPONDENCE, furnished by experts, expressly for this journal, from all the principal trade centres of this country, is embraced in its columns.

THE CONDITION AND PROSPECTS of the various markets are carefully recorded, and the possibilities and opportunities for trade are demonstrated as by no other medium extant.

QUESTIONS OF COMMERCIAL INTEREST and importance are fully and ably discussed editorially, without prejudice, by some of the most responsible writers and statisticians of the time.

THE BUSINESS CHANGES occurring in the United States and Canada—such as failures, dissolutions of partnerships, chattel mortgages, etc., etc.—are printed in each issue, and the list is more complete and comprehensive than can be obtained through any other source.

THE CIRCULATION OF THIS JOURNAL being among the best merchants, manufacturers, and banking institutions of not only this country but many foreign, it presents an excellent advertising opportunity to a limited number of first-class banks, corporations, and business firms.

STENCILING.

The most interesting ornament is always that in which the designer was himself interested. It may almost be said to delight us in proportion as the artist took delight in doing it. If it wearied him, it will scarcely cheer us; and on the other hand, if he sang over his work, the echo of his happiness lingers in the forms of his creation. It follows that hand-work, as opposed to what is miscalled manufacture, is always infinitely to be preferred, since there can be no comparison between the sense of satisfaction and elation with which an artist sees his thought take shape under his hands and the mere content of the mechanic who multiplies forms in which he takes no personal interest. It is difficult, therefore, to overestimate the proportionate value of "hand-painted" ornament, or to overstate its claims; but, when all is said, something depends upon the quality of hand painting. It makes all the difference whether the hand that painted it was expert and facile, and the brain that conceived it receptive and alert. And without detracting from the superiority of such work, it must be allowed that the objections to mechanical processes may be pressed too far. After all, ornament is not of necessity good because it is done by hand; and then in all art there is more or less that is mechanical, and even in that which is mechanical there is often room for the exercise of the artistic sense. It resolves itself very much into a question of the extent to which mechanical appliances shall be used. If by means of them we can reach a more beautiful result, the artist need not quarrel with them; certainly the tradesmen and the general public will not complain.

It will never do at this date to sit and bemoan "the days that are no more," or to bark back to the ways and means of the thirteenth or any other century. Let us rather take stock of our modern conditions and requirements and see how best we can turn them to artistic account. With regard to the hand work of the artist, that may be safely left to take care of itself. No machinery has as yet been remotely forshadowed which will take the place of the artist; and if machinery is eventually to supersede, as doubtless it will, the clumsy reproduction of hands unfit for the work, the world will be no great loser. We may well prefer the mechanical precision of a musical box to the strumming of ill-trained fingers. We must not allow the supreme merit of good hand work to throw a glow of imagined beauty over the work of unskilled or unfeeling handicraftsmen, nor yet to blind us to the merit, real, though secondary, of mere mechanical labor, which may still afford scope for art. If we go back to the consideration of the artist's interest in his work, we know there is a pleasure, even to an artist who has no lack of invention, in sometimes letting his imagination lie fallow, while his hands work monotonously on. I have heard a sculptor, and a thoughtful one, say that his greatest delight was in the mechanical chipping away of the stone before ever his work had reached a stage when the chips began to have much meaning. There may be some affectation in a statement of that sort; but there is truth at the bottom of it, that the most fertile brain cannot be always hatching new ideas; there must be periods, longer or shorter, of incubation; and while the artist is engaged in some merely mechanical process necessary to the completion of one design, other embryo notions have time to take form in his brain. All men who are anything more than machines have their happy moments, and while the fit is on them they feel as if their hands were far too slow to follow the

impulse of their brains—as if they could set a dozen hands at work had they them under their control. But that fit does not last. Let anyone attempt to do nothing but invent, leaving it to others to carry out his inventions, and he will find that his invention will soon begin to flag. It needs imperatively the quiet moments of comparative rest which execution every now and then affords. And what a pleasure it is, when the impulse of invention is over, to settle down to the laying in of a ground, or the scraping of a surface! There are times when the most impatient workman finds a relief in cutting a stencil, and when the mechanical work of stenciling is absolutely delightful.

The practice of stenciling is abused by the decorator and scorned by the artist—the scorn of the one being perhaps the natural result of the abuse of the other. But stenciling is not altogether contemptible, even as art. It is part and parcel of an artist's craft to be workmanlike; and a good workman economizes his resources, reserves his effort for the occasion, and never wastes his energy on the laborious doing of that which by the aid of mechanical appliances can be as pleasantly, more easily, and much more exactly executed.

One disadvantage in stenciling is that the facility with which it can be done is a temptation, and one into which most of us fall, to introduce it continually where other ornament would have been preferable. We are led away by the attractions of quantity, at the inevitable expense of quality.

There are two ways in which stenciling may be put to a very proper, workmanlike, and (in the hands of an artist) artistic use. It may be used either as a mechanical help in the laying-in of certain parts of a design which is afterwards to be finished by hand—as a first painting, in fact—or as a process perfectly adapted of itself to many purposes of decoration.

In the former of these cases, there seems to be no reason why the mechanical process should not be used so long as it does not become apparent. That is to say, if the result is hard and mechanical where we should have had tenderness and freedom, this assertion of its use proves the stencil was misused; the fault in such use of

the stencil is in its conspicuousness. If it does not betray itself, what objection can there be to its use but a sentimental one?

Perhaps there is no more serviceable purpose to which such stenciling can be put than that of filling in a background, more especially where the pattern is comparatively full. The usual way of repeating such a painted pattern is to prick the cartoon or tracing, and pounce the outline, then to fill in the ground by hand, and finally to outline and shade the ornament. The cutting of a stencil is not much more of a job than the pricking of a pattern, and stenciling is not much more trouble than pouncing.—*L. F. Day.*

TO POLISH BRASS.—Pulverize a sufficient quantity of sal-ammoniac very finely and moisten it with soft water, rub the paste on the brass, which should be warmed meanwhile over some clear coals of wood; then rub dry with a soft leather, dusted with a mixture of bran and Spanish white. Another method is to wash the brass with a solution of one ounce of alum boiled in a pint of strong wood ash lye; when dry, polish with fine tripoli on a soft chamois leather.

The printers of Vienna intend celebrating the introduction of printing into Austria. The celebration is to take place in the summer of 1882, when an exhibition is to be held. The president chosen is Dr. Karl von Scherzer.

11 WATERLOO BUILDINGS, HANOVER ST., LIVERPOOL, ENG.

THE PAPER TRADE IN THE CITY OF NEW YORK.

[Continued.]

Half a century ago a character now extinct, or exceedingly rare, was common throughout the country. This was the journeyman paper maker, who traveled often on foot, from village to village, from city to city, and from State to State, carrying with him the skill and the secrets of a trade that was generally regarded as little less mysterious than the arts of the necromancer. Frequently he was an itinerant storehouse of useful knowledge, which he readily and freely dispensed for the benefit of the simple folk he came among. Again he was a well of anecdote, a mover of mirth, and an incentive to song. Still another type of the character was the taciturn and observant.

John B. Ayres began life as a journeyman paper maker and he belonged more nearly to the class last indicated than to any other. But the character of the man will be considered more particularly hereafter. The first step is to give a sketch of his personal history. He was born in 1817 in Newton Lower Falls, Mass. At the time of his birth his father and the father of ex-Governor Rice, of Mass., were running a paper mill together in that town, and in this mill young Ayres while yet a boy learned the paper maker's trade. He also before becoming of age acquired the millwright's art, and in 1837 went to Pequonnock, Conn., to work as millwright in the paper mills of that place. A year later he was working as machine tender for D. & J. Ames in Northampton, Mass., and two years later still was at Lee, Mass., in the same capacity with Platner & Smith. From 1842 and 1844 he was machine tender in the Porter Mills at Niagara Falls, and left there to become foreman of a mill in Greenville, S. C. He remained in Greenville about a year and then he returned North. Lee, Mass., was his objective point, but in passing through Philadelphia he was engaged by Joseph McDowell, then a well-to-do paper dealer and manufacturer, as foreman of his mill in Pennypack, near that city. While with Platner & Smith, of Lee, Mass., a lasting friendship had grown up between himself and the members of that firm, and, consequently, when in 1848 Mr. Platner had completed a new mill at Ancram, Columbia county, New York, he (Ayres) was summoned to take charge of it. Here he remained until 1852.

And now, having been fifteen years a journeyman paper maker, he very naturally began to grow tired of it and to look for some straighter and easier road to fortune. Influenced by the example of Stephen Thorn, with whom he became intimate during his stay in Lee, Mass., he came to this city in 1852 and entered the paper trade as salesman for George Y. Steele & Co. This firm failed about 1854 and then Mr. Ayres was employed by Hanna & Beebe. In 1855, however, he was induced to return to paper making once more as the foreman of Richard & Hoskins' mill at Gardiner, Me. But the proper field for his abilities was in the trade, and, feeling this no doubt, he returned to New York in 1859, and, through the influence of his friend Mr. Thorn, obtained the position of traveling salesman for H. C. & M. Hulbert. In this capacity he was quite successful, and in 1862 he determined to set up in business for himself. With W. H. Ames he formed the copartnership of Ayres & Ames, and began business at 117 Nassau street. The time was auspicious. The war demand was just beginning to make itself felt, and all things, paper included, were going upward with the flood. Upon the breast of this flood Ayres & Ames went on to fortune. In 1865, however, the

firm was dissolved by mutual consent. The dissolution occurred on July 1, and Mr. Ayres continued the business alone until January, 1866, when he associated with him John George Day, who had been a salesman for the then well known paper house of G. H. & L. Lavin, of Chicago, Ill. The name of the new firm was J. B. Ayres & Co. This copartnership lasted until June, 1872. From 1872 to 1876 Mr. Ayres did business by himself, but in the latter year he took Theodore Conrow into copartnership with him, and the name of J. B. Ayres & Co. was again put up over the front door.

Under a gruff exterior, which kept strangers at a distance and often caused him to be misunderstood, Mr. Ayres concealed a kind and generous nature. Though naturally taciturn, he had none of the inclinations of a recluse. On the contrary, he enjoyed the society of his fellow men, and often courted it. He was exceedingly fond of driving good horses, and during the latter years of his life was one of the best known men "on the road;" and in going out upon the road he always took especial pleasure in carrying some valued friend with him. In fact, his love of horses was so strong that, even while he was a journeyman paper maker, as he long afterwards admitted to a friend, he denied himself many of the ordinary comforts of life that he might keep a saddle nag.

His taciturnity has already been referred to. It is said by those who have often traveled with him, that he would frequently ride hundreds of miles without uttering a word. Yet, strange to say, he was an excellent salesman, and on the subject of business could always talk fluently enough. A friend has said of him: "He had the tact of putting his feet on the bar of a chair and talking a man into buying a bill of paper."

To Mr. Ayres' sterling integrity all who came in contact with him bear testimony. He died on April 4 last of apoplexy. On the afternoon of Saturday, April 2, he was out driving. Towards evening his horses were seen trotting rapidly down Seventh avenue, and it was noticed that he did not seem able to manage them. Mr. Briggs, the keeper of the stable made the discovery and he at once stopped the horses, and led them into the building. He observed an unnatural appearance in Mr. Ayres' face and told him that he had better go right to bed. The latter replied shortly, "I have never been sick yet so that I could not walk out, and I have never been in bed in the day time. I am not going to commence now." It was necessary, however, to carry him to his residence where he speedily became unconscious and remained so until he died. He was buried at Pittsfield, Mass.

Theodore Conrow, J. B. Ayres' surviving partner and successor, is a native of this city. In 1864, while still a boy he obtained a situation with Ayres & Ames, and remained in the employ of Mr. Ayres until he went into copartnership with him in 1876. He is a younger brother of William E. Conrow, of J. F. Anderson Jr. & Co. Mr. Conrow, is a shrewd and active business man of good address and pleasing appearance.

Ayres & Ames began business by dealing in book, news and writing paper and paper stock. Mr. Ayres continued in the same line, but had for many years previous to his death subordinated the paper stock branch to that of dealing in paper. The firm has long been indirectly engaged in manufacturing, but does not exclusively own any mills. The business is now carried on in the name of Conrow Brothers, at the old stand 33 Beekman street, Theodore Conrow having taken his brother James W. Conrow into copartnership with him.

"THE GREAT ROCK ISLAND ROUTE"

Calls your attention to the following REASONS WHY, if about to make a Journey to the GREAT WEST, you should travel over it:

As nearly absolute safety as is possible to be attained. Sure connections in UNION DEPOTS, at all important points. No change of cars between CHICAGO, KANSAS CITY, LEAVENWORTH, ATCHISON or COUNCIL BLUFFS. Quick journeys because carried on Fast Express Trains. Day cars that are not only artistically decorated, but furnished with seats that admit of ease and comfort. Sleeping cars that permit quiet rest in home-like beds. Dining cars that are used only for eating purposes, and in which the best of meals are served for the reasonable sum of seventy-five cents each. A journey that furnishes the finest views of the fertile farms and pretty cities of Illinois, Iowa and Missouri, and is afterwards remembered as one of the pleasant incidents of life. You arrive at destination rested, not weary; clean, not dirty; calm, not angry. In brief, you get the maximum of comfort at a minimum of cost.

That the unremitting care of the Chicago, Rock Island & Pacific Railway for the comfort of its patrons is appreciated, is attested by its constantly increasing business, and the fact that it is the favorite route with delegates and visitors to the great assemblages, political, religious, educational and benevolent, that assemble from time to time in the great cities of the United States, as well as tourists who seek the pleasantest lines of travel while en route to behold the wonderful scenes of Colorado, the Yellowstone and Yosemite. To accommodate those who desire to visit Colorado for health, pleasure or business, in the most auspicious time of the year, the Summer season and months of September and October, the Company every year puts on sale, May 1st, at all coupon ticket offices in the United States and Canada, round trip tickets to

DENVER, COLORADO SPRINGS AND PUEBLO,

At reduced rates, good returning, until October 31st. Also to San Francisco, for parties of ten or more, good for ninety days, at great reduction from regular fares.

REMEMBER, this is the most direct route for all points WEST and SOUTHWEST. For further information, time-tables, maps or folders, call upon or address

FOUR AWARDS!

All of them the Highest Given, at the Australian World's Fair, Melbourne, 1880-81

THREE AWARDS OF FIRST DEGREE OF MERIT—for Copying, Black and Colored Inks, respectively.

ONE AWARD OF THIRD DEGREE OF MERIT—for Mucilage.

This last, although of the Third Degree, was the Highest and **ONLY** Award made for Mucilage.

Library of U S Pat-
ents Office X

er American Inks received a higher award than the Third Degree of Merit.

CARTER, DINSMORE & CO., Boston and New York.

BYRON WESTON

DALTON, MASS., U. S. A.,

HAS BEEN AWARDED THE

GRAND PRIZE GOLD MEDAL

AND RECOMMENDED THE

Medal of Honor and Perfection

At PARIS, 1878,

This being the **HIGHEST** and **ONLY** AWARD given for

LINEN RECORD & LEDGER PAPER.

—A SPECIALTY.—

THIS Paper has received **THE HIGHEST PREMIUM** over all others from the Cincinnati Industrial Exhibition, Massachusetts Charitable Mechanics' Association, Franklin Institute of Philadelphia, Louisville Exposition, Medal and diploma from United States Centennial Commission, Medal of Progress American Institute, 1877, and Medal of Improvement and Progress, Boston, 1878. Its

PRINCIPAL ADVANTAGES

are as follows:—1. It contains more **LINEN** than any other Ledger Paper, has a longer fibre, and is, consequently, tougher. 2. Having a harder and better body, it frays less in erasure, so that by simply using the rubber after the eraser, the ink is prevented from spreading. 3. It is more uniform in Weight Color and Finish. 4. It never cockles if properly bound. 5. Its chemical action upon ink is such that it both writes and rules up better. For proof of the foregoing, refer to a large number of Stationers, Bookbinders, Bookkeepers, and Recorders, who have given it, after a severe test, the preference over all others. This paper is *Double Sized*, and will stand any climate or the most acid of fluid inks.

Send for sample sheet, **ERASE** and **REWRITE FOUR TIMES** on same spot, Each sheet is water-marked with name and date.

WHOLE NO. 316.

Correspondence.

BALTIMORE NOTES.

[FROM OUR REGULAR CORRESPONDENT.]

BALTIMORE, Md., July 12, 1881.

The extreme hot weather has made business duller than ever this season, but it is just what the trade expected and nobody seems disappointed. Contracts for books and stationery of the Board of School Commissioners have furnished the only boom of late days. Mr. Denny, from the Committee on Books, reported in the board meeting a resolution in favor of awarding the contract for books for the ten months from September 1 next to July, 1882, to John B. Piet, and for stationery to Wm. J. C. Dulaney & Co. There were five bidders each for books and stationery. The report of the committee was adopted, and the president was authorized to carry out the resolution. The same committee reported in favor of the adoption of Shepherd's Elementary Grammar in the schools in place of Harvey's Grammar, now used. Last year the stationery contract was awarded to John B. Piet, and the books divided, J. W. Bond & Co. securing the contract for one portion of the schools and W. J. C. Dulaney & Co. for the second portion. This year, as will be seen from the foregoing, only two firms have the contracts, viz., those of Piet and Dulaney.

The Maryland State Teachers' Association held its annual convention in Frederick, of Barbara Fritschie fame, on Wednesday, Thursday, and Friday last, Professor M. A. Newell, of the State Normal School, calling the meeting to order. On the opening day the following resolutions were adopted:

Resolved by the Maryland State Teachers' Association, in convention assembled, That we have heard with inexpressible horror of the attempted assassination of the President of the United States, and most profoundly sympathize with him and his family in this hour of their deep distress.

Resolved, That the president of this association be authorized and requested to communicate the action of the association to Secretary Blaine immediately.

Officers were elected as follows on the closing day of the convention: President, A. G. Harley, Centreville, Md.; first vice president, A. N. Ebaugh, Baltimore; second vice president, Miss A. E. Leaverton, Chestertown, Md.; recording secretary, A. F. Wilkerson, Baltimore; corresponding secretary, Miss Helen Rowe, Frederick; treasurer, Chas. G. Edwards, Baltimore; Executive Committee, F. A. Soper, Baltimore; J. A. S. Cochran, Allegany county; P. M. Leakin, Anne Arundel county; Geo. A. Harter and S. K. White.

Resolutions on the deaths of Profs. J. Asbury Morgan, D. A. Hollingshead, Wm. L. Baird and

Arthur Mulligan and John R. Roche, were submitted and adopted.

A number of members of the book and stationery trade are at present out of town, spending a much needed vacation at the different watering places. They will, it is to be hoped, return full of vigor for the fall business, and push as none other but Baltimore men can.

I was shown, a day or two ago, some of the illustrations that are to be used in Piet's almanac for '82, and they are truly beautiful. Last year was the first time Mr. Piet attempted anything of the kind, and the venture proved so successful that he has concluded to get out the second issue on a scale of increased excellence. There will be an illustration on every page, and the reading matter will supply nothing but useful information.

No drummers have been in town during the past week. This is a relief to the trade, for, though the majority of them are pleasant gentlemen, they are all more or less possessors of the gift of the gab, and the weather is decidedly too warm too endure their "buzzing."

The illustrated New York papers, with cuts of the assassination in Washington, had large sales in Baltimore. A paper dealer told me yesterday that, while book papers are flat and ruled goods were very slow, the news papers were unusually brisk. The demand from Washington was extremely large, all caused by the occurrence at the Baltimore and Potomac depot.

W. P. M.

BOSTON NOTES.

[FROM OUR REGULAR CORRESPONDENT.]

BOSTON, Mass., July 11, 1881.

Stationers report a very fair trade during the past week, but nothing like activity. It is evident that business is now in a sort of chrysalis state, preparatory to its development a few weeks hence. The trade here are ready to "wrestle" with any amount of business. Stocks are in ample supply and prices satisfactory all around.

Lockwood, Brooks & Co., Washington street, have recently produced some very desirable and unique lines of stationery and note paper. The facility with which artistic variation can be made in this line of goods is surprising.

The fact that some of our leading booksellers and publishers are gradually going into chambers, shows that, whether the profits of the business are large or small, the trade, or a portion of it, are disposed to do business in a more quiet way, removed from the wear and tear and din of the street. This example was set by Houghton, Mifflin & Co., when they leased the second floor of one of the most spacious and convenient dwell-

ing houses on Beacon street, near Tremont, and when Osgood & Co. removed up town, far from any other publishing house.

The upper end of Franklin street is being rapidly possessed by booksellers who carry large lines of stationery. Per contra, Cornhill, a locality once monopolized by the book dealers and stationers, has fallen into the hands of the furniture people.

This transference of trades quarters shows the drift of business localities, and is also an outgrowth of new facilities for getting into the city.

Dennison & Co., whose tags, tissue papers and other specialties are in great demand, have one of the best arranged establishments in the city. They report a very satisfactory business for this season of the year, and also report the outlook as one of the most encouraging yet known in the history of their business.

The unprecedented volume of trade for the first six months of the year, as indicated by the Clearing House exchanges, leads our business men to the conclusion that it is perfectly safe to calculate upon as good a business for the coming six months, the stationers coming in for their share of it. In view of the prospective immense holiday trade next season, coupled with a good trade during the next three months, the stationers, it would seem, have no fault to find with the business situation. Apropos, agents and others from the interior all agree that this department of trade has unusually good prospects.

Stocks in the interior towns of northern New England are being gradually reduced, and in some instances stocks are quite bare. A movement along the whole line toward the wholesalers and jobbers cannot be far off.

C. C. Soule, the law book publisher, was in London last week.

The *Daily Advertiser* has appeared in a new dress and quarto form.

The *Commercial Bulletin* looks handsome, printed from new type.

Captain A. A. Folsom, an old newspaper man, and now superintendent of the Boston and Providence Railroad, was a passenger on board the Arizona, whose loss proved a hoax.

Printers report a little falling off in work, but business, upon the whole, is quite satisfactory for the season. Next month will inaugurate an active demand for filing orders. L.

TORONTO NOTES.

[FROM OUR REGULAR CORRESPONDENT.]

TORONTO, Ont., July 9, 1881.

The attempted assassination of your President last week came upon us like an electric shock. The first report appeared so absurd and pre-

posterior that we were inclined to believe it a ghastly joke. No one could understand at the first blush why one not a maniac would want to kill Garfield, and presume that only a disordered intellect would attempt to assign a plausible reason for it now. When the fact was realized, a thrill of horror ran through the country. The newspaper offices were besieged by hundreds of people anxious to get the latest reports and, what never occurred before in this city, the daily papers ran their presses all through Sunday giving latest news, and the papers were bought up by eager thousands. In the churches the last reports were read from the pulpits and prayers offered for the recovery of the stricken President.

We have three or four pulp mills in operation in the Dominion and others in contemplation. The factory of John Ferguson & Co., at Sherbrooke, is now running night and day, turning out thirty tons a week, nearly all of which goes to New England paper makers. They use spruce lumber altogether in making pulp, and the factory, which has 800 available horse-powers, runs five "grinders" and three "wet machines."

It has been terribly hot for a few days, and your humble servant feels considerably like a wilted plant—I presume plants have feeling, else they would not shrivel up under the scorching sun, and hang their heads as though they were done for. It may be there is a touch of the human about them, and they would feel better if they had a drink. Anyway, with the temperature at ninety in the shade, is just a little too much for me even to drive a pen.

The closing up of Hart & Rawlinson's estate still drags along, but at a meeting of creditors yesterday it was decided to advertise the business for sale by tender. The absence of a bankrupt law gives opportunities for crookedness, by which large creditors or particular friends may get an advantage, and you know the flesh of human nature is weak, and when acquisitiveness predominates it is apt to go in for number one without any reference to number two, and, unfortunately, the state we are in just now leaves an opening for the practice of the predominating propensity. I do not say there has been anything of the sort in this case; on the contrary, so far, the creditors, excepting in a few little scenes where personal interest for the moment got the advantage of better judgment, have worked very harmoniously. The action yesterday was a wise one, and the matter, no doubt, will soon be closed. Still, all business men are greatly inconvenienced by the absence of a practical and inexpensive law for winding up estates. The old law, in consequence of its legal technicalities and expense, enabling assignees and lawyers to get the oyster, and the unfortunate creditors the shell, got into disfavor and was wiped out. But a bankrupt law is a necessity, and it is to be hoped when our house meets again some of our leading business men will be prepared to frame a bill which will be acceptable to the country.

Commercial travelers are swarming, both English and American, the latter largely predominating. The head of a large firm said to me today that nearly all his time was taken up with them. He could not do otherwise than treat them civilly, and if the matter kept on in this way they would have to get a man specially to wait on them; and, as one illustration of persistence, one man, whom he told me he had not time to see, he found quietly sitting in the hall, awaiting his arrival home in the evening.

Mr. Briggs, of the Methodist Book and Publishing House, says they were never so busy at this season of the year. They have just published "Studies in Matthew," by Rev. J. Cyndylan Jones, 12mo; Wesley's "Doctrinal Stand-

ards," by Rev. N. Burwash, S. T. D., Professor Victoria University, and a second edition of "Spiritual Struggles of a Roman Catholic," by Rev. L. N. Beaudry.

The firm of I. C. Stuart & Co., dealers in stationery and wall paper in this city, has been dissolved by the retirement of Mr. Stuart. He is succeeded by J. S. Henderson, and the future style will be Mullen, Henderson & Co.

J. R. Barber, paper manufacturer, &c., Georgetown, near this city, has paid the membership fee of the Mechanics' Institute of that town for forty of his employees. This is an act worthy of imitation and a good investment, and if more largely followed would save many a young man from the barroom and bad habits, and result in the performance of more work. C. H.

WILLIAM CASLON AND TYPE FOUNDING IN ENGLAND.

It is said that Caxton, the first English printer, had five distinct founts prepared for his personal use; and he was succeeded by a line of English printers and type founders, until, by the seventeenth century, type founding was established in England as a distinct business. This was in consequence of a decree of the Star Chamber, which was issued on the 11th of July, 1637. The order was given for political reasons, arising from a desire to restrict the number of presses; and the order limited the number of type or letter foundries to four.

The consequence of this order was, that for a long number of years a considerable portion of the type used in England was manufactured in Holland, where the Dutch were, in the meanwhile, uninterfered with by legislators, conducting type founding with much energy and skill.

It was only some years after the commencement of the last century that England found herself capable of manufacturing all the type needed for the use of her numerous printers, through the skillful labors of the eminent William Caslon, a native of Shropshire, born about 1692, and dying in January, 1766, and often styled "The Prince of English Type Founders." He established a foundry in London in 1716, which is still known as the Caslon Foundry, and up till very recently was conducted by his descendants, its 150th anniversary having been celebrated in 1866. Some of his punches furnish matrices for old-style letter used at the present day.

He served a regular apprenticeship to an engraver of gun-barrel plates, and afterwards continued the business for himself, gaining considerable reputation for the dexterity and taste he exhibited in his designs and devices. He also occasionally made tools for chasers of silver plate and for bookbinders. But it was by the excellence of some of his designs that he attracted the attention, in 1716, of the distinguished printer, Mr. Watts.

Having sent for young William Caslon, Mr. Watts showed to him some of the fine types of the Elzevirs, and asked him if he could equal them. Caslon expressed an anxiety to make the attempt. Thereupon, those three distinguished printers, Watts, Bowyer and Bettenham, lent him £500 to further his design.

So well did he succeed, and such reputation did he make, that in 1720 he was selected by the Society for the Promotion of Christian Knowledge to cut the fount of Arabic character for the New Testament and the Psalter they published. Two years after he produced the Coptic type for the Pentateuch edited by Dr. Wilkins, and was soon recognized as the foremost type founder of England. The home market was now supplied

with type made by him, instead of being, as it had been previously, imported from Holland.

Caslon's most famous letter (known as "Old-face" type) was based upon the fine, clear forms of the Elzevirs, but rounded, expanded and made more elegant and distinct. This type maintained its pre-eminent popularity for nearly half a century, until 1772, when newer shapes became the fashion, and continued to reign paramount until a gradual reaction during recent (the last fifteen or twenty) years has brought it again into favor, and the identical punches cut by William Caslon early in the eighteenth century were again brought into service.—*Exchange*.

THE SORBONNE AND PRINTERS.

The College of the Sorbonne invited to France three printers from Germany, namely, Ulric Gering, Martin Crantz and Michael Friburger, who established in the college a printing office, which was the first ever established in Paris. The members of the college furnished these printers with apartments for the purpose of carrying on their business, and there they pursued their labors from 1470 to 1473.

Printers must ever regard with considerable liking the Sorbonne, as it continued to exhibit to them great esteem. It accorded to Gering what was styled the privilege of hospitality. It gave him not only a right to an apartment, but a right to a seat at the table of the members; and that compliment Gering amply returned by contributions of money.

The Sorbonne was founded as far back as the middle of the thirteenth century—in 1252—and took its name from its founder, Robert de Sorbonne, who was the chaplain of St. Louis, and who established the college as a gratuitous theological seminary for the poor students of Paris.

The members were about thirty in number; they were admitted after a severe scholastic examination, and they received their maintenance from the college.

It had not been established more than a hundred years when the Sorbonne became largely endowed, and possessed many distinguished members. For about four centuries it was considered the most eminent theological institution belonging to the Catholic Church, and was frequently called upon to decide the important theological disputes then disturbing Europe, and to act as adviser in the selection of the Popes. During the eighteenth century its influence gradually declined, and after its suppression, in 1789, it was never restored.

The commanding position of the Sorbonne may be judged from the fact that when Froben, the learned printer of Basle, wrote to Martin Luther in 1520, to congratulate him upon the success of his earliest treatises, Froben informed him that, having reprinted them in Basle, he had sent a large number into Paris, where they had been received with pleasure, and approved by scholars, and even by some of the Sorbonnists. This favor was not, however, to last, for it was the Assembly of the Sorbonne that censured Luther in 1521, and caused his books to be burned in the porch of Notre Dame, ordering Jodocus Bodius, one of their sworn printers, to print the censure with fidelity and exactness by virtue of his oath of obedience.

It may be remembered that, in the memoir of Robert Estienne that appeared in these columns, it was shown how that famous printer was shielded by the personal friendship of the King of France, Francis I., from the animosity of the Sorbonne; but upon the accession of another king, Robert Estienne fled secretly to Geneva, dreading that the long-waiting vengeance of the irate doctors would be appeased only with his life.—*Exchange*.

OLD BERKSHIRE MILLS

DALTON, MASS., U. S. A.

One party writes: "The two hundred RECORD BOOKS, for 83 of the 99 Counties, now on exhibition at the Iowa State Fair, at Des Moines; and all, but four (!) of them, made from your 'OLD BERKSHIRE MILLS LINEN LEDGER,' Medium, 40lb., make a splendid show."

[The above cut is a fac-simile of the wrapper used on the Linen Ledger Paper.]

We will pay for any book rejected on account of fault in the paper. Send for Samples, test them in comparison, and see that your books are made from paper thus water-marked.

THOS. DE LA RUE & CO.'S

Christmas and New Year Cards

FOR THE SEASON 1881-2.

Pattern Books of the above Fine Art Publications, containing a rich profusion of New and Elegant Patterns, Chromo-Lithographed in the Highest Style of Art, after Original Designs by Eminent Artists, are now ready.

N. B.—Shown by Principal Jobbers in the States.

PROSPECTUS TO THE TRADE.

GENTLEMEN—In offering our Pattern Book of CHRISTMAS AND NEW YEAR CARDS for the approaching Season to the attention of the Trade, we desire once more to express our acknowledgments to our Customers in the United Kingdom, the United States of America, and many other parts of the world, for the increasing appreciation in which our productions are held, and which has given them a position of pre-eminence wherever shown. This fact has been established by the concurring testimony of the Press, both at home and abroad; but it is perhaps most conclusively attested by the circumstance that the peculiarities of our style and treatment have found numerous imitators, whose endeavor it has been to give to their productions the closest possible resemblance to ours. The futility of those efforts is, however, assured beforehand, from the fact that we are fortunate enough to retain, almost without exception, the EXCLUSIVE services of those eminent Artists to whose talent and skill we are indebted for the principal Designs included in our Collection.

In preparing the Patterns for the new Season, we have faithfully adhered to the same general principles as in former years, and have thus been enabled to secure both originality and unconventionality in our Designs. We have, at the same time, taken care to impart freshness and novelty to the subjects selected for treatment, with the result that the assemblage of Patterns now offered is of the most varied and attractive character.

Our Pattern Book is more extensive than on any former occasion, and, unlike most of the Pattern Books now in the market, contains not a SINGLE PICTURE that has been previously shown. Among the Series given, we may be permitted to call special attention to the following:

Embroidery Series.—These Satin Chromos have now an established reputation amongst ladies, and, when worked up as insertions in embroidery and other needlework, have a really splendid appearance. In addition to a fine display in the ordinary sizes, we this year offer an extra large Satin Chromo of "Cupid and Psyche," excellently adapted for a chair cover, cushion, anti-macassar, or other object in art needlework.

The Book-Marker Series.—These are of a very superior and artistic character, highly suitable for presents.

Through the kindness of Sir Henry Cole, K. C. B., the originator of Christmas Cards, we are enabled to offer a FAC-SIMILE reproduction of the FIRST Christmas Card ever issued. These cards were published in 1846, from a design prepared by J. C. Horsley, R. A. When it is considered what an enormous extension the issuing of Christmas Cards has undergone in the thirty-five years which have elapsed since that time, this ORIGINAL card (Series No. 459) cannot but be regarded with great interest and curiosity. We have, therefore, reproduced it in a popular form, to retail at a low price, and would recommend its being made a prominent feature in every shop window. Awaiting the favor of your commands,

We remain yours faithfully,

BUNHILL ROW, LONDON, E. C., May, 1881.

Aug. Leonhardi's (Dresden) Celebrated Alizarine Writing
and Copying Ink.

THIS Ink combines the qualities of a Writing and Copying Ink in a manner unsurpassed by any other make in the market. As a Copying Ink it will make a distinct copy even several days after, and if required two clear copies can be taken. As a Writing Ink it excels for its intense blackness. It never fades, nor does it blur. It is used in all Government Offices on the Continent of Europe.
We are enabled to quote this Ink far below the prices of other Copying Inks.

Publishers of SOUVENIR ALBUMS, of all the larger cities of the Union, of

No. 18 High Street, Boston, Mass.

Trade Novelties.

[We will be glad to receive samples of all novelties issued in the trade, and will notice all such which possess merit free of charge. It is desirable to accompany descriptions with cuts whenever possible.]

NEW PATENTS.

No. 243,688. Game Apparatus.—Anna B. Bullard, Boston, Mass.

A game apparatus composed of a supporting or foundation surface or card having at least seven spaces and two sets of movable figures of at least three figures to a set.

No. 243,690. Mechanism for Counting Folded Newspapers.—John J. Clause, John R. Woodlock and Joseph Bichl, Chicago, Ill.

No. 243,706. Shield for Book Covers.—Edward E. Johnson, Painesville, Ohio.

No. 243,752. Doll Head.—Frita Bartenstein, Hüttensteinach, Germany.

No. 243,753. Combined Desk Rule and Balance.—Stephen E. Barton, Boston, Mass.

No. 243,767. Machinery for Slitting Paper.—James Flanders, Augusta, Me., assignor to Cyrus Chambers, Jr., Philadelphia, Pa.

1. The combination, with the drum of a printing machine, of a metallic belt or strip and a cutter which acts against it to sever the paper during the process of printing. 2. In combination with the drum of a printing press covered with "packing," a metallic belt surrounding the packing, and a cutter, under which said belt passes, for the purpose of protecting the blanket and tympan sheet from the action of the cutter.

No. 243,772. Album.—Eli S. Glover, Battle Creek, Mich. Patented in Belgium, October 15, 1879; in Italy, November 20, 1879; in France, December 11, 1879; in Germany, January 30, 1880; in Austria, May 24, 1880; in Spain, August 1, 1880; and in England, September 23, 1880.

In an album or other folio, the combination, with a series of stubs bound together and to the covers of the book, said stubs being provided with short fixed pins and spaces along their front edges, of leaves provided with tubes on their back edges adapted to engage with the pins on the stubs, said tubes being of the exact length to fill the spaces on the stubs, by which construction the leaves are held in place and are capable of being easily detached from or attached to the stubs by means of bending or springing the leaf to the right or left for the purpose.

No. 243,786. Pin Ticket.—Thomas Moore, Brooklyn, N. Y.

In a pin ticket, in combination, an M-shaped staple and a perforated ticket, said M-shaped staple being passed through the body of the ticket and bent up at right angles thereto, so that the bends and free ends of the staple are at one side thereof.

No. 243,855. Toy Dominos.—Charles M. Crandall, Montrose, Pa.

Toy domino blocks consisting of a series of blocks with their faces divided into two equal spaces, ornamented with sections of birds or animals.

No. 243,857. Bag Machine.—William C. Cross, Boston, Mass.

The combination of two pairs of clamping jaw and blade carrying rolls and means for directing the blank with the folded end of the diamond foremost from the first to the second pair of rolls.

No. 243,858. Paper Bag Machine.—William C. Cross, Boston, Mass.

In machinery for making the second and final folds of a satchel bottom on a diamond folded blank, the combination of a rotating jaw roll and two spring and cam controlled clamping jaws carried by the same with a blade carrying

roll provided with two blades, adapted to coat the one with one clamping jaw on the leading flap of the diamond, the other with the other clamping jaw on the rear flap of the diamond.

No. 243,863. Detachably Covered Book.—William L. Deming, Salem, Ohio.

No. 243,875. Envelope for Cigarette Papers.—Charles G. Emery, Brooklyn, N. Y.

No. 243,925. Box for Holding Game Counters, &c.—John H. La Bau, Brooklyn, N. Y.

A box for holding counters, checks or chips, composed of a block of wood having in it a line or row of cells extending through the top or upper surface thereof, and having in its upper surface a dovetailed or rabbeted slideway or recess intersecting the cells, and a sliding cover dovetailed or rabbeted to fit in said slideway or recess.

No. 243,955. Book Holder.—La Verne W. Noyes, Chicago, Ill.

No. 243,964. Combined Stereoscope and Graphoscope.—Lewis Pattberg, Jersey City, N. J.

No. 243,968. Composition for Rendering Photographic and other Prints Transparent.—Elisha W. Poston, Fort Wayne, Ind.

No. 243,981. Mold for Casting Stereotype Plates.—Walter Scott, Chicago, Ill.

No. 9,792. Document Envelope.—Frederick S. Hasbrouck, New York, N. Y., assignee, by mesne assignments, of John W. Wilcox. Original No., 67,092, dated, July 23, 1867.

DESIGNS.

Nos. 12,332 and 12,333. Font of Printing Type.—Charles E. Heyer, Chicago, Ill., assignor to Arthur M. Barnhart, Alson E. Barnhart, Charles E. Spindler, and Simon G. Stein. Term of patents, seven years.

No. 12,334. Receptacle for Business Cards.—William T. Mersereau, Orange, N. J. Term of patent, three and a half years.

No. 12,336. Toy.—Edward G. Williams, Brooklyn, N. Y., assignor to himself, Edward R. Ives, Bridgeport, Conn., and Cornelius Blakelee, Brooklyn, N. Y. Term of patent, seven years.

PRINTER'S INK AS A LUBRICANT.

One of the happy thoughts of the social reformation (of the Mechanical Engineers), says the *American Machinist*, was the following from James C. Bayles, editor of the *Iron Age*, responding to the sentiment, "The Best of Lubricants—Printer's Ink":

Printer's ink, considered as a lubricant for what Dr. Holmes has happily called "the racked axle of art's rattling car," is undoubtedly the one which has the least co-efficient of friction. It is the best of lubricants for the ways on which great undertakings are launched, and for the grooves along which profitable effort is exerted. What incalculable losses of power does it not avert, and who can estimate the friction which, without it, would wear out our lives in useless work! Civilization would be like Penelope's web, woven by day and raveled out by night, showing no gain, and the tedious years would come and go empty-handed, leaving us still traversing with weary feet the pathways worn by preceding generations.

But it is not only as a lubricant that printer's ink merits the attention of the engineer. We must consider it as a source as well as a conservator of power. It has been the pleasure of many writers, and none more gracefully than the late Canon Kingsley, to tell us how the boarded sunshine locked up in the growing plant uncounted centuries ago is given forth again as light and heat, when the carbon atoms in the coal we throw upon the fire rush to the embrace of the oxygen atoms they parted from when

this old world was young. How startling this phenomenon in the case of printer's ink, when its black carbon atoms, warmed to ignition by the divine spark of human intelligence, are mingled with thought and flash forth from the printed page to illuminate the world and drive the wheels of industry with constantly accelerating speed! There is something more in this than the releasing of the wound spring or the liberation of the suspended weight—something more than that which we note in the physical phenomena of combustion—a return of the power in carbon into the forms in which, as light, heat and actinic force, it was absorbed and held by the vegetation of the early world. As letters on printed page we see the union of carbon with some part of that all pervading creative intelligence, which, as matter, it knew only as a law of nature, and by this union it becomes the true *elixir vite* of the alchemist's dream. While we have it truth cannot die nor civilization retrace its steps.

But whether as a lubricant or as a source of power, printer's ink needs to be mixed with brains. It has often been asked, why is it that in a land where inventive genius is a birthright, and mechanical progress springs naturally from the conditions of our rapidly and unevenly developed civilization, we have not long had a great and valuable technical press? Why is it that the literature of the work bench grows, while that of the drafting table has yet to be created? Why is it that the literature of the tap-hole and the counting room is profitable, while that of the tunnel head and the laboratory is not? I will tell you. It is one of the elementary truths of mechanics that you cannot get out of one end of a machine more power than you put in at the other. The work bench and the counting room have put into the mighty engines of the press the power it returns to them. The drafting room and the laboratory have offered the mechanical equivalent of nothing—a glass of water—doubtless expecting that by some trick of the journalist's pen it would be converted into cold vapor with an irresistible pressure per square inch, and susceptible of infinite verification by the squeak of a goose quill. The expectation has thus far been disappointed; but in the organization of such societies as this we see the first step in the direction of a great technical press. We may define our objects, draft constitutions, and frame by-laws as we will, but the fact remains that it is only as contributors' clubs, attached to the technical press, that such societies as ours can accomplish a work great enough to justify the labor devolving upon the membership. Printer's ink must supply our motive force and be the lubricant on which we slide into greatness; and if we but mingle with it the best fruits of our study and experiment, it will show us a greater miracle than that which the physicist delights to trace in the formation and combustion of fuel.

The finest floors are said to be seen in Russia. For these of the highest grade tropical woods are exclusively employed. Fir and pine are never used, as in consequence of their sticky character they attract and retain dust and dirt and thereby soon become blackened. Pitch pine, too, is liable to shrink, even after being well seasoned. The mosaic wood floors in Russia are often of extraordinary beauty. One in the summer palace is of small squares of ebony inlaid with mother-of-pearl. A considerable trade is done in Dantzic and Riga by exporting small blocks of oak for parquette floors. There is an active demand for these in France and Germany, but none in England.

NEW AND SEASONABLE GOODS.

THE ACME STATIONERY AND PAPER CO.,

No. 117 Fulton and 52 Ann Street, New York,

MANUFACTURERS OF FINE WHITE AND MANILA WRITING PAPERS IN

PADS, TABLETS AND PORTFOLIOS.

Are now offering, for the Coming Season's School Trade, an extensive line of **SCHOOL EXERCISE BOOKS** in 14 different sizes and styles; made from *White* and *Manila Writing Paper* in *plain* and *fancy ruling*; bound in *Press Board* and *Rope Paper Covers*; with round corners, and in every respect the best line of these goods now in the market.

🔍 SPECIAL TERMS FOR LARGE LOTS. 🔍

COMPOSITION BOOKS.

(Copyrighted, June, 1881.)

Something entirely new and attractive for the School Trade. One of the best selling books published. They are printed on our best manila paper, bound in heavy covers with rounded corners. At the head of each page is printed a cut of some simple subject for the children to write about. The name, "*Pretty Stories*," will cause almost every child to want it. The book is recommended by the best primary teachers in the country. **FIRST SERIES**, 6½ × 8 inches, 24 pages, per 100 books, \$8.00. Put up in packages of 25 books each.

We have added to our *Portfolio Tablets* a line of *Fine Linen Paper*, bound in Leatherette, with stamped covers, very handsome; and also are putting up a new style of Tablet in *Fine White Writing Paper*, bound in ornamental flexible covers, with stiff back, which we call our "*TOURISTS' TABLETS*," in Commercial and Packet Note, and Congress Letter Sizes.

PERFECTED STYLOGRAFIC.

The original and genuine Pen. Warranted the best made. Thirteen Patents granted to **A. T. CROSS**, the last, June 20, 1880, being the most important and giving the name **Perfected**. All cuts are exact size.

MAXIMUM.—Holds most ink of any pen made; tires the hand less than smaller barrels. Fits Hambley's Pocket. Same price as Long.

LONG.—The famous Desk Pen. Extra long. Holds most ink, except the Maximum.

SHORT.—Most widely known and sold heretofore; but Maximum and Long are

much better for desk or Hambley's Pocket. So this will be largely superseded.

Thirteen patents granted; seven more applied for; more genuine improvements; better record; more styles; larger stock; more thoroughly protected by patents than all rivals combined.

🔍 See Descriptive Circulars.

GIANT, with Cord and Gold Ring, same price as Short.

Dealers and agents supplied with wood, glass and paper signs, placards, circulars, leaflets and cuts. We make both largest and smallest Pens, all of which will have the new improvements.

Trade Gossip.

All new goods and designs which are not, strictly speaking, "Novelties" will be noticed under this head. The trade are requested to forward descriptions with samples in order to secure proper notice.

T. J. Welty, publisher, Ponca, Neb., has sold out.

R. H. Goldsmith, printer, New Haven, Conn., is dead.

D. O. McCray, publisher, Burdenville, Kan., has sold out.

L. H. Bell, printer, Louisville, Ky., has been burned out. Insured.

Mrs. J. S. Mayne, fancy goods dealer, Worcester, Mass., is closing up.

Phillips & Fisk, dealers in notions, The Dalles, Oregon, have dissolved partnership.

L. E. Chapin, publisher of the *Wyoming County Herald*, Perry, N. Y., has sold out.

The stock of G. J. Gebhardt & Co., lithographers, Montreal, is advertised for sale by trustee.

The Compton Lithograph Works, St. Louis, Mo., have been incorporated. Capital stock, \$50,000.

William Graham, of Liebenroth, Von Auw & Co., is enjoying his vacation at Scarborough Beach, Me.

I. N. Parker & Son, booksellers and stationers, Lewiston, Me., have dissolved partnership. B. W. Parker continues.

Wemple & Co., lithographers, New York city, have dissolved partnership. A new firm has been formed under same style.

Geo. and R. H. Eichner have retired from the firm of Isaac Friedenwald, lithographer, &c., Baltimore, Md. Isaac Friedenwald continues.

Robert Clarke & Co., Cincinnati, has issued catalogue No. 13 of second-hand books and remainders, with many new books, both American and foreign.

W. Waters & Co. have increased their facilities by taking additional room and putting in some new machinery, and expect to do a much larger business than ever.

J. B. Lippincott & Co., Philadelphia, have issued their July bulletin of new publications. Among the new works is Major Pinto's account of his trip across the African continent.

Among the visiting members of the trade to the city during the week were Mr. Schneider, of Schneider & Fuchs, Baltimore; E. Doolittle, of Smith, Doolittle & Smith, Boston; and Herman Weber, representing Vergho, Rubling & Co., Chicago.

B. E. Pike, the genial, gentlemanly and handsome traveling representative of M. A. Reay, is now on vacation, and intends to do all of the important places in New England ad interim. He first went to Cape Cod to inspect the beauties of the scenery there, after which he will visit Mount Washington, and will finally wind up at the Catskills, whence he will return to begin his fall campaign among the Western stationers.

An Authors' Cooperative and Mutual Publishing Company, limited, has been incorporated in England, with a capital of \$50,000 in shares of \$5 each, its purpose being to carry on the publishing business on strictly cooperative principles. Thirty per cent. is promised to shareholders. The prospectus says that the large fortunes made by many of the publishing firms point to the profitable nature of the business.

Bailey, Banks & Biddle, Philadelphia, were the first to introduce and supply the trade with fine illuminated note paper and correspondence cards, and to-day have many imitators. To such an extent were their designs pirated that it became necessary to copyright all designs, and for the coming season they have fifty-four new and original designs protected by copyright. The firm says that it will surely test the matter by law if there are any infringements of its rights. Mr. Davis, the general manager of the stationery department, has just returned from a trip to Boston and New York with sufficient orders for early fall delivery to keep the house busy until September. The firm now employs in this branch of its business thirty-seven hands. All papers are brought direct from the mills flat, and envelope making, paper cutting, engraving, plate printing, illuminating, etc., is done at its factory, 1129 Girard street.

Hard & Parsons will, in a few days, show some special novelties in chenille and fringe wedding envelopes and cards specially designed for *elite* invitation purposes; and also many very elegant styles of menu and guest cards mounted with real flowers, as well as new designs in programme and visiting cards. The firm's fall line of illuminated and stamped papereries is now complete and embraces two hundred and fifty designs. The house is also showing some very handsome and novel one, two and one-half and four quire papereries in all plush and in plush and gold boxes, some of which are hand-painted. The representatives of the house will all be on the road during next week, and it may be to the interest of the trade to delay their orders until they see these goods.

Charles H. Sherman & Co., as reported in THE STATIONER of the 7th inst., have purchased the old established and well known business of the late John W. Gladding, formerly John Gladding & Son, Philadelphia, who manufactured blank books and diaries for the past thirty-five years. They have a large and complete stock on hand, and are now ready for business, and hope, by close attention to all favors, to retain the support as given the old house. Samuel W. Simms, with the old firm for the past sixteen years, the last five as manager, will be at his old post and will have an interest in the business.

The Hektograph Company has added another article to its line of specialties. Royal cement is said to be just the thing for repairing furniture, china, glassware, rubber, leather, books, billiard cues, or cementing labels on tin or other metal. For any use where glue, cement or mullage is required, it is claimed to be unrivaled. Hot water, it is said, will have no effect on an article mended with it. It is perfectly liquid and always ready for immediate use.

Hasbrouck & Watson are about bringing out a novelty in the line of wire stitching machines, which on account of its low price will be likely to supersede the expensive ones now in use. This firm has again found it necessary to enlarge their quarters, where their facilities and capacity will be doubled.

Jennings Brothers, paper dealers, New York city, have dissolved partnership. Isaac Jennings continues under same style.

A. E. Millard, bookseller and stationer, Pittsfield, Mass., has sold out to William Nugent.

The stock of H. F. Allen, fancy goods dealer, Marlboro, Mass., has been attached.

A. G. McBride, publisher of the *Chief*, Kirwin, Kan., has sold out.

A. J. Smith, printer, Toronto, Ont., has been burned out.

Chas. B. Hall, stationer, Sandwich, Mass., is dead.

E. J. Chester, dealer in fancy goods, Lincoln, Neb., has sold out.

Elisha T. Fuller, dealer in notions, Hartford, Conn., has made an assignment.

David Sternberg, dealer in notions, Louisville, Ky., has been burned out. Insured.

Wm. M. Hess, representing the St. Louis Book and News Company, was in town during the week.

W. J. McIntosh has retired from the firm of John Cameron & Co., printers and publishers, London, Ont. Remaining partners will continue under the old style.

A traveling salesman, who has a thorough knowledge of the blank book business and can influence the trade, can hear of a good opening by addressing the Philadelphia office of THE AMERICAN STATIONER with reference.

McCarty & Hasberg are showing an entire new line of stationers' fancy goods suitable for the coming season, and which, it is claimed, cannot be seen elsewhere. The trade might find it advantageous to pay this house a visit before placing their orders.

A. Weidmann & Co. are making more extensive preparations for the fall trade this year than they ever did. They are beginning to receive their importations, the most of which are novelties, and they have manufactured and ready for market several new things in tin and other toys.

J. D. Whitmore & Co. have added one more branch to their already large establishments, this last industry being the manufacture of specially prepared inks and powders to be used with their automatic shading pen. They manufacture six different colors in both inks and powders, and assort them, two colors of each kind in a box. The powders are designed for transmission through the mails, and are as good as the prepared ink. The colors are said to be very brilliant and lasting, and the inks or powders are a necessary adjunct to the proper manipulation of the pen.

Among the visiting members of the stationery and paper trade in the city during the past week were James Knight, of H. B. Nims & Co., Troy, N. Y.; Mr. Ayres, of Richmond, Backus & Co., Detroit, Mich.; George H. Taylor, of G. H. Taylor & Co., Chicago; E. O'Connell, of O'Connell & Benoit, Baltimore, Md.; J. G. Ditman, Philadelphia; George W. Gray, Omaha, Neb.; William Lohman, St. Louis; R. A. Rogers, Dayton, O.; J. T. Crane, of Warren, Fuller & Co., Dayton, O.; A. A. Son, of Son & Brother, San Francisco; Mr. Nelson, Montreal, Can.; Mr. Dietz, of Terrill, Dietz & Co., Louisville, Ky., and Mr. Rising, Mittineague, Mass.

Charles J. Cohen, of Philadelphia, announces the introduction of a new line of maple rulers, both plain and with brass edges, and marked with inches. These goods are of new manufacture, under the special supervision of Mr. Cohen, and as each rule bears the trademark of the firm the goods may be relied on to be accurate. They are in stock in sizes, 12, 15, 18, 21 and 24 inches, put up in strong double boxes of one dozen of a kind, neatly labeled. Great fault has hitherto been found by the trade that this stock by other makers has been put up in flimsy boxes, which would fall to pieces before the goods reached the shelves of a retailer. Mr. Cohen claims to have effectually overcome this difficulty by using the style of box above referred to. The prices of these goods are stated to be lower by a large percentage than of any similar class of

rulers in the market. Samples and prices will be furnished on application.

The fringing of wedding envelopes and cards is likely to be a rage this fall.

White & Mains have succeeded White & Blymer, publishers of the *Democrat*, Defiance, O.

Cyrus D. Camp, publisher of the *Republican*, Tunkhannock, Pa., has sold out to G. S. Baldwin and C. M. Chapman.

The James Hogan Printing Company, St. Louis, Mo., has been incorporated. Capital stock, \$50,000, half of which is paid up.

Barnett & Bach, wholesale dealers in fancy goods, New York city, have admitted Samuel J. Hart to partnership under the style of Barnett, Bach & Hart.

Charles D. Howard, publisher of the *Peabody Press*, Peabody, Mass., has admitted John P. Fernald to partnership. Their style is C. D. Howard & Co.

The attention of the trade is invited to the advertisement of Victor E. Mauger & Petrie in another column. It is in relation to lithographic machinery and is important.

John A. Haddock, Philadelphia, has been getting out a number of new designs in cards. He has a blank Christmas circular which is well adapted for trade announcements.

The showcards which J. D. Whitmore & Co. furnish with their automatic shading pen are really elegant works of art and it is hard to believe that they are hand writing and not lithograph work.

The numerous friends of William O'Grady, with M. A. Reay, will be glad to learn that he is convalescent and is able to show himself at his desk again. His illness, which was of four weeks' duration, was very severe.

There is a manufactory of globes and other school appliances at Windsor Locks, Conn., which makes globes of five sizes, from three inches diameter to twelve inches diameter, and furnishes them in twelve different mountings. It turns out 5,000 globes per year.

There are some charming conceits in Tuck's new Xmas cards. In fact the ordinary lines are more likely to take better than those which secured the prizes. They include many novelties in design and coloring, and ought to sell readily. Willy Wallach has the agency.

Henry Reed, of Geo. Routledge & Sons, while fishing on Peewaunee Lake, Wis., lately, narrowly escaped drowning. The boat he was fishing from was overturned in a squall, but thanks to the efforts of J. Hovenden, of R. Worthington's, he was rescued after having a severe ducking.

The employees of J. D. Whitmore & Co. will have their fifth annual afternoon and evening picnic at New Washington Park, adjoining Jones' Woods, Sixty-ninth street and East River, on Wednesday, July 27. The success which has hitherto attended these events may be accepted as a guaranty of a pleasant time on this occasion.

An association of French printers, so styled, for the purpose of printing editions of the Greek classics, was formed in 1588. They issued a number of handsome works printed with the royal types, and adorned with the figure of an antique galley in full sail, which is the city arms of Paris. Antoine, the son of Paul Estienne, belonged to the association, and in conjunction with them printed the handsome "Sibyllina Oracula," dated 1589.

THE STATIONER.

DEVOTED TO THE INTERESTS OF THE

Stationery and Fancy Goods Trades.

WEEKLY---\$2.00 PER ANNUM.

Single Copies - - - - 10 Cents.

NEW YORK, THURSDAY, JULY 14, 1881.

Advertisements cannot be received for insertion in the current week later than 12 M. on Wednesday. The charge for advertising is 25 cents a line, each insertion. Special terms for standing and displayed advertisements to be had on application.

This journal aims to be a medium of information for and a representative of the interests of every one connected with the stationery and fancy goods trades. It contains a full and trustworthy survey of the market for stationery in this country, in all cases giving the actual prices at which goods can be bought of importers and jobbers in this city, together with a detailed account of novelties in the trade, patents relating to stationery, and current items of interest. A review of foreign markets and accounts of movements abroad will also be furnished, and no pains will be spared to make THE STATIONER a thorough and complete exponent of the trade.

Subscription and postage for Great Britain, per annum..... 12s.

Any information our readers may wish to obtain shall be cheerfully given, and prompt replies will be made to all inquiries addressed to us on any subjects of interest to the trade.

Communications on all trade matters are earnestly solicited. Address

HOWARD LOCKWOOD, Pres. and Treas.

Subscribers to THE STATIONER can be supplied with the best cloth binder in the market. Deliverable at the publication office. Price, fifty cents.

Readers of this paper who avail themselves of the information obtained from its columns, by advertisement or otherwise, are requested to notify their correspondents of the source of their information.

NEXT week we shall issue the Fall trade number of THE STATIONER, giving a larger paper and extra edition for the benefit of advertisers. Those who have not sent in their advertisements or who may wish to take advantage of next week's issue will please send in their favors at once, so as to insure insertion.

LOCKWOOD'S Directory of the Paper Trade proves its usefulness and value in more ways than in supplying the best information as to the paper mills and paper product of the country. It is also of benefit to advertisers. This statement is sustained by a Canadian correspondent, who says: "I have found the Directory of great benefit, and I think that some of the advertisers ought to feel grateful, as I was enabled to send an order of nearly \$10,000 by seeing the firm advertise in the Directory." There is more suggestion in this than meets the eye at first glance. If an advertiser in the Directory can secure \$10,000 orders through its medium, how much benefit ought an enterprising merchant to derive from steady and judicious advertising in a well known and reliable trade journal?

READERS will notice that a call is out for a meeting of the envelope manufacturers. Although this call emanates from only one house and is addressed to the other manufacturers, it may be presumed that the action is not taken without first consulting and talking up the subject of a meeting. If the proposition to meet for the purpose of establishing a uniform price for envelopes fails to result in anything definite it cannot, under the circumstances, be called a failure for the envelope trade generally. But if, as alleged, ruling prices are too low, there is no reason why an advance should not be made, inasmuch as consumers can easily afford to pay any little difference that might be agreed on. The chief objection to an agreement among the envelope manufacturing houses is that such compacts are too easily and too quickly broken, and the distributing trade are uncertain as to what may be expected. This leads the stationery trade to buy in limited quantities and the experience of the past is likely to induce many to watch the competing houses closely and to buy goods only as wanted.

In looking over the sample book of a well known importing house the other day, and comparing the designs of fancy cards shown therein, we were very much struck with the fact that the designs which were given the most prominent position and which were the most costly because they were supposed to represent the best types of artistic excellence as to subject, etc., are the least likely to meet popular fancies or to be sold on their pleasing qualities alone. There are many cards, cheaper as to cost and perhaps less artistic when judged by the formal rules of criticism, that will sell more readily and for as much money as those which we will call, for convenience, prize designs. It has been intimated to us, although we

are not officially informed, that a leading manufacturer has decided to adopt the suggestion made by THE STATIONER, when we discussed this subject some time ago, and that not only art critics will be invited to judgment upon designs, but that an expression of popular choice and fancy will be asked for. This, if carried out, will, we think, make some change in the standing of the awards, or, if not allowed to prevail to the extent of actually designating the prizes, will probably give the manufacturer an opportunity of finding out where his profit will lie and in what direction to turn his efforts for production.

THE ENVELOPE TRADE.

The following circular letter has been addressed by White, Corbin & Co. to nineteen of the principal envelope concerns in the country:

ROCKVILLE, Conn., July 7, 1881.

To—
Berlin & Jones Envelope Company, W. H. Hill, W. D. & E. D. Lockwood, C. D. Marshall, National Paperie Company, Powers Paper Company, Samuel Raynor & Co., E. J. Spangler & Co., G. H. Whitcomb & Co., Charles J. Cohen, Holyoke Envelope Company, Morgan Envelope Company, Geo. W. Nesbit & Co., Plimpton Manufacturing Company, J. Q. Preble & Co., M. A. Reay & Co, Taylor, Nichols & Co., Jas. D. Whitmore & Co, Wolf Brothers.

GENTLEMEN—With a view to establishing a uniform price on our products, we ask you to meet us at the Allyn House, Hartford, Conn., July 20, at one o'clock P. M., to see what can be done to this end, and wish you to notify us if you will be present, and if not if you will submit in writing your views in the matter. Yours, very truly,

WHITE, CORBIN & CO.

TO REMOVE OLD PAINT.—Take sal soda, 2 pounds; lime, ¼ pound; hot water, 1 gallon; agitate all together, and apply to old paint while warm. The mixture will soon loosen the paint so that you can easily remove it.

TO transfer engravings to mother-of-pearl, coat the shell with thin white copal varnish. As soon as the varnish becomes sticky, place the engraving face downward on it and press it well into the varnish. After the varnish becomes thoroughly dry, moisten the back of the engraving, and remove the paper very carefully by rubbing. When the paper is all removed and the surface becomes dry, varnish lightly with copal.

OBITUARY.

LEONARD WHITNEY.

Leonard Whitney, of the well known firm of Hollingsworth & Whitney (having mills in Watertown and South Braintree, Mass., and Gardiner, Me., and stores in Boston and New York), died at his residence in Watertown on Tuesday evening July 5, at 9:30 o'clock. He was sixty-two years of age and leaves a wife, three sons and one daughter.

Mr. Whitney was the first maker of paper bags by machinery. The present firm started about twenty years ago and built up a large and prosperous business. Mr. Whitney was an active member of the Methodist Church, and a director of the Union Market National Bank of Watertown, also director of the Pacific National Bank of Boston. He had been in failing health for some time and his death was not entirely unexpected.

JOHN A. APPLETON.

John A. Appleton, a member of the well known book firm of D. Appleton & Co., died at his residence at Clifton, S. I., early yesterday morning after a short illness. He was born in Massachusetts in 1818, and was at the time of his demise in his sixty-fifth year. He received a good high school education, and shortly after leaving school he removed to Michigan, where he embarked in the banking business. His stay in the West was of short duration. He returned to this city in 1838, and entered his father's book store as clerk, which was then at No. 200 Broadway. Filling that position for a brief period, he was admitted as a member of the firm. His death was very sudden to his family and friends, having been sick but two or three weeks. About six years ago, while out driving with his wife, he was thrown from his carriage and suffered a dislocation of one of his legs. It is thought he never recovered from this shock, and partly from the accident, malaria and liver complaint combined, these causes helped to hasten his death. The deceased leaves behind him an enviable reputation for benevolence and business integrity. His wife, four sons and one daughter survive him.

EDWIN BULKLEY.

Edwin Bulkley, senior member of the firm of Bulkley, Duntun & Co. and the oldest paper merchant in this city, died of paralysis on Thursday night, July 7, at his country seat in Southport, Conn. Mr. Bulkley was born in Southport in 1817. In 1838, after a visit to Europe, he became a partner in the firm of Cross, Bulkley & Gookin, paper dealers. This firm afterward became Bulkley & Gookin, and was succeeded successively by Bulkley & Brother, Bulkley, Brother & Co., and Bulkley, Duntun & Co. Mr. Bulkley, besides having an active interest in several paper mills, was a director of the Bank of North America; the National Bank of Southport, Conn.; the Crocker National Bank, of Turner's Falls, Mass.; the Standard Fire Insurance Company, of New York, and was a large stockholder in the Delaware, Lackawanna and Western Railroad. He was not able to pay much attention to business during the past four years, having been subject to attacks of paralysis, which, while not affecting his mind, rendered him physically incapable of active work. He was much esteemed by all who knew him, either in the walks of trade or private life, and his memory is endeared to many by numerous acts of unostentatious charity and kindly feeling. His funeral took place on Monday last, and was largely attended by his neigh-

bors and by many of his associates in the paper trade.

At a meeting of the paper trade in this city, held pursuant to call at the office of W. H. Parsons & Co., on Saturday last, for the purpose of taking some suitable action in reference to the death of Mr. Bulkley, the following named gentlemen were present: C. C. Woolworth, of Woolworth & Graham; John Graham, of Woolworth & Graham; T. P. Wilkinson, of Wilkinson Brothers & Co.; Thomas Vernon, of Vernon Brothers & Co.; W. H. Parsons, of W. H. Parsons & Co.; Geo. F. Hicks, of W. H. Parsons & Co.; Geo. F. Perkins, of Perkins, Goodwin & Co.; J. F. Anderson, Jr., of J. F. Anderson, Jr., & Co.; James E. Hayes; B. Myers, of B. & O. Myers; Geo. W. Millar, of Geo. W. Millar & Co.; C. W. Barnes, of C. W. Barnes & Co.; Howard Lockwood.

The meeting was called to order by W. H. Parsons, who nominated Thomas Vernon as chairman and C. W. Barnes as secretary. On taking the chair, Mr. Vernon in a few appropriate remarks, referred to his long business acquaintance with the deceased. Speaking of his many sterling qualities and the high esteem in which he was held by everyone; his integrity was never questioned, and his reputation as a man of fair dealing and strict honesty was unsurpassed.

Mr. Vernon then read a set of resolutions which he had prepared in anticipation of this meeting, and desired the meeting to take some action thereon.

Following are the resolutions:

Whereas, The sad news having reached us of the death of our esteemed brother tradesman, Edwin Bulkley, whom we have known for many years (some of us over thirty years) as an upright, frank, honest and benevolent gentleman;

Resolved, That the paper dealers and manufacturers doing business in this city hereby unite in expressing their estimate of his worth and esteem for his character, and their warm sympathy for his widow and family in this time of their sorrow and great bereavement, and that two of our number be requested to attend the funeral as delegates representing this meeting.

Resolved, That the secretary be requested to forward a copy of the foregoing to the family of the deceased and his business associates, and that the *Paper Trade Journal* be requested to publish the same in its next issue.

It was moved and seconded that a committee of two be appointed by the chair to report upon the resolutions. Carried.

Messrs. Anderson and Perkins were appointed as such committee.

The committee reported the resolutions, recommending their adoption, and they were adopted accordingly.

On motion, duly seconded, Messrs. Vernon and Parsons were appointed a committee to attend the funeral of the deceased as delegates representing the meeting.

On motion, the meeting adjourned.

C. W. BARNES, Secretary.

The amount of light absorbed by glass globes varies somewhat according to the nature of the glass. A plain glass globe absorbs from 10 to 15 per cent.; ground glass from 25 to 40 per cent.; and opal from 35 to 60 per cent. Determinations recently made with globes now in common use, having large openings at the bottom and top, show that 26 per cent. of the light is absorbed by ground glass, and 55 per cent. by opal glass. One advantage of globes with large openings at the bottom is that some of the light escapes into the room through the opening, and if these globes were substituted for the old-fashioned

ones with small openings, very much would be gained. Apart from this, globes having small openings cause a flickering and smoking flame by producing strong currents of air through the globe.

During fires in coal mines various substances have been found to be formed. Among them, at Commentry, M. Daubree has discovered a new magnetic mineral which contains phosphorus and small quantities of arsenic and sulphur. This substance resembles various natural minerals and some meteoric stones. A similar substance is found in veins of sylicate containing vivianite.

Market Review.

OFFICE OF THE AMERICAN STATIONER,
WEDNESDAY, July 13, 1881.

THE MONEY MARKET.—The monetary situation continues unchanged, the supply of capital offering being fully equal to all the requirements of borrowers, both for regular business and speculative purposes. The rates of interest varied from 2 to 4½ per cent., according to the length of time and the collateral. The stock market during the past week was almost entirely governed by the condition of the President, and the favorable aspect which his case assumed caused such a reaction that a steady appreciation in values took place in the face of circumstances which would otherwise have caused almost universal depression. Railroad mortgages were not in very great demand, and some issues which had been previously quite active were during the past week comparatively neglected. The tone of the dealings was, however, fairly steady, and no important changes in prices were recorded. The government bond market, in view of the excitement attendant upon the attack on the life of the President, was notably strong, and prices were affected only to a small extent. Sterling and French exchange is quiet and steady, and Swiss and German rather firmer. The posted rates for prime bankers' sterling are \$4.84½ and \$4.86½; the actual rates are \$4.83½@4.84 and \$4.85½@4.86. The actual rates for Continental exchange are as follows: Francs, 5.22½ and 5.19½; marks, 94¼ and 94½, and guilders, 40 and 40¼.

THE PAPER MARKET.—The market this week has developed no new feature. Business with the city jobbing trade has been somewhat interrupted by the excessive heat, which has driven a great many of the trade out of the city, the effect being to reduce business to more than usual small proportions. Manufacturers generally are said to be yet fairly engaged on orders, some of them in the completion of old contracts, while others have been fortunate enough to secure new ones, although some of them at lower prices. As to whether present values can be sustained through the remainder of the summer hinges upon the question of the water supply, as any great improvement in the demand at this time of the year cannot reasonably be expected. There are some manufacturers seeking orders, who in order to keep their mills employed during the remainder of the season, make offers considerably below the current quoted rates. Although this refers more particularly to the lower grades of book and news, yet it applies to some extent to fine papers. The Western wrapping mills will shut down from July 18 to 31.

THE STATIONERY MARKET.—In the line of strictly staple goods most dealers report a little improvement as having taken place within the week, with every indication that a reaction is close at hand, and that in the next two weeks at the latest the fall season will be fairly opened. In the fancy goods trade some houses report business as very active, for the most part on orders received by mail, purchases by out of town buyers in person being as yet very limited. Manufacturers and dealers have prepared larger stocks of goods than usual this season, and the prospects are very promising that they will experience an unusual demand, and will have little if any to carry over at its close. No changes are reported in prices.

ALFRED IRELAND, Manager.

CEMENTINE.

WE desire to call attention to a new article which we are just now introducing to the trade. It is a liquid glue, cement and mucilage combined. In our own business we experienced so much difficulty in finding an adhesive that would make our labels adhere to the tin cover of the Hektograph, that we gave a commission to one of our most distinguished chemists to compound for us an article which would answer our purpose. After months of labor the result has been the production of an adhesive so far superior to anything heretofore made, that we have decided to manufacture and offer it for sale, and are now ready to supply it in any quantity. It is without doubt the best article of the kind for family and general use ever offered to the public. For repairing China, Glassware, Furniture, Rubber, Leather, Books, Billiard Cues, or pasting labels upon tin or other metal or for any use where glue, cement or mucilage is required, it is unrivaled. For warm climates we make an article expressly adapted for use there. We supply it by the gallon or barrel, and for family use it is put up in bottles, with brush, at 25 cents. Samples will be sent free to large consumers.

LIBERAL DISCOUNT TO THE TRADE.

EMINENT PRINTERS.

Germany is indebted to Gunther Zainer for having first introduced into that country round letters, called "Roman" because they were first used in Rome in the days of antiquity. This letter, with minor modifications to that used by the ancient Romans, forms the text now of all printed matter in the English, French, Italian, Spanish, Portuguese, and various other European languages. It possesses a manifest superiority to all other representations of an alphabet in the fact that it is made up exclusively of figures mathematically accurate—consisting of straight lines, circles, and arcs of circles. Gunther Zainer employed for the first time the Roman letter in his beautiful edition of the "Etymologier" of Saint Isidore, of Seville, in 1472.

This celebrated printer was born about the year 1430, at Reutlingen, a small town of the Duchy of Wirtemberg. It may be conjectured, with a great deal of probability, that he learned his art from the inventor of it.

Initiated into all the secrets of typography, he went and established himself at the then capital of Poland, Cracow, where, when he was a young man about twenty-five years of age, he printed John de Turrecremata's "Explanation of the Psalter." This work, remarkable among the Incunabula, is scarcely known out of Poland. Copies of it are known only to be in the following libraries: one in the library of the University of Cracow, another in that of Prince Adam Czartoryski, at Pulawy; a third in that of Titus Dzialinski, at Konarzew, near Posen, and four in the library of the University of Warsaw. Of the "Joannis de Turrecremata Explanatio in Psalterium, Cracis" (that is, Cracow), impressa, about the year 1465, descriptions are given by the bibliographers Zapf, Denis, Pantzer, Bandtkie, Bentkowski and Lelewel, and by none so minutely as Bandtkie, in his "History of Printing in Cracow," published in the Polish language at Cracow, in 1819, and again in another work in Polish, printed and published in three volumes octavo, six years after, on the "History of Printing in Poland."

From Cracow Gunther Zainer went to Augsburg, where, on establishing himself in 1467, he printed, the year after, St. Bonaventura's "Meditations on the Life of Christ" ("Meditationes Vitæ Christi"). What is particularly striking in the "Meditations on the Life of Christ," by St. Bonaventura (General of the Order of St. Francis in the thirteenth century), is that it contains incidents not to be found in any of the Evangelists, as well as several revelations that appear to be the outcome of the vivid imagination of the writers from whom St. Bonaventura took his facts, along with extravagant ideas and preposterous allusions.

In 1469 Gunther Zainer printed, at Augsburg, the "Summa" of John De Auerbach, a presbyter of Bamberg. Jean Saubert has made a mistake about this work, which he says was a Latin edition of the Bible, printed by Auerbach at Reutlingen. This presumed edition of the Bible is cited by Chevallier in his "Origine de l'Imprimerie de Paris," by Père Lelong in his "Bibliotheca Sacra," by Mattaire in his "Annales Typographiques," and lastly by De Bure in his "Bibliographie Instructive."

The Abbé Rive speaks of Gunther Zainer, in his "Classe aux Bibliographes" (pp. 320-7), as the printer of a Bible; and so does Père Laire in his "Index Librorum" (I., 70).

The "Summa" of Bartholemy de San Concordis, with the date of 1475, is the last work that issued from the presses of Gunther Zainer.

According to a register kept in the Charter

House at Buxheim, this artist died in the year 1478.

He had a brother, or at least some near relative, named John, who carried on printing at Ulm, just as Gunther carried it on at Augsburg. John Zainer published in that city, from 1473 to 1477, a great number of beautiful editions, which are much sought after by the curious in bibliography, especially of the oldest works.

The first book that issued from the presses of John Zainer was Boccaccio's Latin work on "Renowned Women" ("De Clais Mulieribus"), in folio. John Zainer died in 1500.—*Exchange*.

More than half a million francs have been subscribed by the booksellers and printers of France, for the erection of a hall for the meeting of the Stationers' Board of Trade in Paris.

STAFFORD'S UNIVERSAL WRITING INK!

A PERFECT BLACK WRITING FLUID.

It contains no gum, and flows very freely, making a smooth, even mark.

It positively will not corrode Steel Pens.

Writes darker than any known ink, and turns at once jet black.

Being a perfect chemical solution, it cannot thicken or deposit a sediment.

Never moulds in any climate. Freezing does not injure it.

Never changes in color or consistency while in use in the inkstand.

Resists Acids. Is more permanent than any other ink.

It will be found more economical than any other ink, as it can be used to the last drop.

One of the most valuable and remarkable features of this Ink is the extreme rapidity with which it dries on the paper, it being seldom necessary to use a blotter. This quality should recommend it to bookkeepers.

In the United States, this Ink has completely superseded the old fashioned pale black inks, and has to a great extent taken the place of the faint green writing fluids.

Mr. J. ADEE HEPWITH, the eminent English Chemist, says :

"I find S. S. Stafford's Universal Ink to be proof against all acids; and, from my knowledge of its ingredients, I believe it to be the most permanent ink in existence, as it cannot rust out like other inks that are prepared from galls and iron. As it seems to be entirely free from any tendency to thicken or corrode steel pens, and is BLACK AT ONCE, I cannot but regard its invention as a valuable discovery."

S. S. STAFFORD, Chemist, No. 218 PEARL STREET, NEW YORK.

GREAT TELESCOPES.

In Europe one of the strongest refracting telescopes in the world is one recently constructed in England, having an object glass 25 inches in diameter. If used when the air is pure it bears a power of 3,000 on the moon; in other words, the moon seen through it appears as it would were it 3,000 times nearer to us, or at a distance of 80 miles instead of 240,000. At the Pulkowa Observatory, in Russia, the telescope has 15 inches aperture—this being the famous instrument used by Struve. The largest reflecting telescope in the world is one constructed by Lord Rosse, at Louth, Ireland. Its mirror is six feet in diameter and weighs four tons. The tube at the bottom of which it is placed is fifty-two feet long and seven feet across. It is computed that when this instrument is used, 250,000 times as much light from a heavenly body is collected as reaches the naked eye. At Malta, Lassell's instrument has an aperture of 4 feet. There is also a huge telescope in Australia, at Melbourne, and another at Cordova, in the Argentine Republic, the latter having an aperture of $4\frac{1}{2}$ feet. At the Imperial Observatory, Paris, the telescope is of 12 $\frac{3}{4}$ inches aperture, and at Munich 11 inches. There are also scores of other telescopes of less aperture in Europe, yet of no small service in the great field of investigation to which they are devoted.

COATING TIN PLATES WITH GLASS.

The great danger of suffering from the effects of certain chemical actions taking place between the acids and salts in the substances packed in cans and the tin in the plates from which cans are made, will soon be removed, if the following described invention can be made practicable. It is stated in an English paper that a firm at Dunstable provides receptacles made of plates faced with a material which interposes a film between the surface of the metal and the fruit or other contents. The insoluble portion of the composition is silicate of lime or fluo-silicate of lime (glass powder), previously acted on by fluoric acid; the soluble portion being silicate of soda and potash. Preferably, that kind of silicate of lime is used which has been procured by double decomposition from polysulphide of calcium, chloride of calcium and hydrate of lime, or there may be used a silicate of the earthy bases or metals or precipitated gelatinous silica. The alkali may be fixed or removed by a bath containing a dilute solution of fluo-silicic acid, when fluoric acid has not been used, or a dilute solution of any other suitable acid. To make the composition mix the soluble with the insoluble silicate in equal proportions, although these may be varied according to the consistency required. The plates are coated with the mixture by a brush, or by dipping into a bath. After coating, the plates are dried by heat, and are ready for manufacture. This invention furnishes a plate with a surface somewhat resembling glass, but without the aid of fusion; and this coating cannot be separated from the metal, which may be bent or worked in any manner desired.

Various materials may be advantageously covered with rubber enamel, iron being thus protected from rust; glass and crockery from breaking and wood rendered stronger and more ornamental. The caoutchouc material is applied in a plastic state to the foundation material, after which the whole article is submitted to a high degree of heat, the materials being thus firmly united and the enameled surface obtained.

FOLEY'S

Celebrated Gold Pens and Pencils

THE FINEST AND BEST.

CIRCULAR.—To those engaged in mercantile pursuits, any invention that will facilitate their labor is highly worthy of notice, as well as of extensive patronage. One of the most important inventions of the present age is that of a pen that possesses the necessary qualities of firmness in mark and durability in use. Pre-eminently such are those of JOHN FOLEY, Manufacturer of Fine Gold Pens and Pencils, No. 2 Astor House. Their superior value is tested by the long time he has been engaged in our city in their manufacture. We, the subscribers, who know the value of FOLEY'S PENS from constant use of them for a number of years, cheerfully recommend them to those who wish for the best and most perfect Gold Pen ever made.

The Chicago & Northwestern Railway

Is the OLDEST! BEST! CONSTRUCTED! BEST
EQUIPPED! and hence the

Leading Railway of the West and Northwest!

It is the short and best route between Chicago and all points in Northern Illinois, Iowa, Dakota, Wyoming, Nebraska, California, Oregon, Arizona, Utah, Colorado, Idaho, Montana, Nevada, and for Council Bluffs, Omaha, Denver, Leadville, Salt Lake, San Francisco, Deadwood, Sioux City, Cedar Rapids, Des Moines, Columbus, and all Points in the Territories, and the West. Also, for Milwaukee, Green Bay, Oshkosh, Sheboygan, Marquette, Fond du Lac, Watertown, Houghton, Neenah, Menasha, St. Paul, Minneapolis, Huron, Volga, Fargo, Bismarck, Winona, La Crosse, Owatonna, and all points in Minnesota, Dakota, Wisconsin and the Northwest.

At Council Bluffs the Trains of the Chicago and Northwestern and the U. P. Railways depart from, arrive at and use the same joint Union Depot.

At Chicago, close connections are made with the Lake Shore, Michigan Central, Baltimore and Ohio, Ft. Wayne and Pennsylvania, and Chicago and Grand Trunk Railways, and the Kankakee and Pan Handle Routes. Close connections made at Junction Points.

It is the Only Line running PULLMAN HOTEL DINING CARS between Chicago and Council Bluffs. Pullman Sleepers on all Night Trains.

Insist upon Ticket Agents selling you Tickets via this road. Examine your Tickets, and refuse to buy if they do not read over the Chicago and Northwestern Railway.

If you wish the Best Traveling Accommodations you will buy your Tickets by this route, ☞ AND WILL TAKE NONE OTHER.

All Ticket Agents sell Tickets by this Line.

ORIENTAL ORNAMENT.

In a lecture delivered in London, H. H. Statman said:

"Saracenic ornament might be divided into two classes, the earlier being the Arabic and the later the more elaborate and refined Moresque phase. Both were marked by a free employment of flowing and involved patterns, based on natural forms, but into which the representation of the human figure or of animals did not enter. The designers were prohibited by their religion from availing themselves of these obvious sources of ornamental motive, and so were compelled to bestow the more skill upon the limited field of artistic decoration, with results at once original and beautiful. In Arabic work color was employed more consistently than in Celtic; in the latter art it was applied anywhere upon a band or stem, just where the artist thought a spot of red or green would appear effective. In the former art a given figure was maintained of one color throughout, harmony and balance being attained by interlacing the forms with a regard both to color and line. By the Moors, the flowing and interchanged forms were carried out with still greater intricacy and refinement, and the colors were most harmoniously combined so as to produce a rich effect. Moresque ornament was carried out with a delicacy, richness and elaboration which often removed all recollection of the mechanical origin and building up of the design. The hexagon, distorted and varied, with ingeniously stopped lines here and there, was the basis of many of the Moresque schemes of decoration; and in the better class of work the ornament was often conceived upon two, or even three, apparent planes of differing designs, the interstices being fitted up with other patterns placed obliquely to the principal forms. These were treated with gilding, blue, red and other bright colors, applied in such small quantities as not to offend.

"In Persian work of all periods there was a more free use of flowers, but the ideas were too realistically treated and not with the intellectual skill shown by neighboring nations. In examining Indian ornament they came upon a very different mode of treatment, and one in which natural forms were boldly treated in naturalistic fashion, both as to color and outline. One reason for this was that our knowledge of Indian ornament was largely derived from textile patterns, in which the natural treatment of flowers and foliage was more suitable than it was to architectural design or to furniture. A peculiarity of Indian ornament was that the artist never sought to define or enclose his ornament with a band. The edge of the portion decorated was marked only by the stoppage of the patterns. Especially could this be noticed in damascened metal work. The ornament was clearly much more guided by the feeling and taste of the designer than by any reasoning process. The alternation of two forms or colors, the variation of minor details, and the use of the singular detail we called the curled pine cone, were other characteristics of Indian ornament; but its great and distinguishing beauty was the skillful use of color. The brightest hues were so blended in small quantities as not to attract the eye to any one portion of a design, but to leave a general impression of bloom."

The Post Office Department of Germany has adopted and uses postage stamps whose colors can be canceled by water. This prevents fraud, for as soon as the stamps are washed the color is obliterated.

AND PAPERS.**The J. W. Stoakes Automatic Shading
PEN.**FOR PLAIN, FANCY AND ORNAMENTAL
LETTERING.

WASHINGTON, D. C., March, 1880.

I desire to say that the "Shading Pen" invented by
Mr. STOAKES meets a want long felt by penmen.
The work done by it is perfect in line and shade. The
rapidity with which lettering is done, aside from the
beauty of the work, is enough to recommend it for
general use.

H. A. WHITNEY, Ass't Cashier, U. S. Treasury.

U. S. ENGINEER'S OFFICE, ST. LOUIS, MO.,

February 11, 1880.

I have tried the PEN, and it gives great satisfaction.
It is worth twice the price asked. It is valuable for
headings, etc.

"THE GREAT ROCK ISLAND ROUTE"

Calls your attention to the following REASONS WHY, if about to make a Journey to the GREAT WEST, you should travel over it:

As nearly absolute safety as is possible to be attained. Sure connections in UNION DEPOTS, at all important points. No change of cars between CHICAGO, KANSAS CITY, LEAVENWORTH, ATCHISON or COUNCIL BLUFFS. Quick journeys because carried on Fast Express Trains. Day cars that are not only artistically decorated, but furnished with seats that admit of ease and comfort. Sleeping cars that permit quiet rest in home-like beds. Dining cars that are used only for eating purposes, and in which the best of meals are served for the reasonable sum of seventy-five cents each. A journey that furnishes the finest views of the fertile farms and pretty cities of Illinois, Iowa and Missouri, and is afterwards remembered as one of the pleasant incidents of life. You arrive at destination rested, not weary; clean, not dirty; calm, not angry. In brief, you get the maximum of comfort at a minimum of cost.

That the unremitting care of the Chicago, Rock Island & Pacific Railway for the comfort of its patrons is appreciated, is attested by its constantly increasing business, and the fact that it is the favorite route with delegates and visitors to the great assemblages, political, religious, educational and benevolent, that assemble from time to time in the great cities of the United States, as well as tourists who seek the pleasant lines of travel while en route to behold the wonderful scenes of Colorado, the Yellowstone and Yosemite. To accommodate those who desire to visit Colorado for health, pleasure or business, in the most auspicious time of the year, the Summer season and months of September and October, the Company every year puts on sale, May 1st, at all coupon ticket offices in the United States and Canada, round trip tickets to

DENVER, COLORADO SPRINGS AND PUEBLO,

At reduced rates, good returning, until October 31st. Also to San Francisco, for parties of ten or more, good for ninety days, at great reduction from regular fares.

REMEMBER, this is the most direct route for all points WEST and SOUTHWEST. For further information, time-tables, maps or folders, call upon or address

R. R. CABLE,

Vice-President and Gen'l Man'gr, Chicago.

FOUR AWARDS!

All of them the Highest Given, at the Australian World's Fair, Melbourne, 1880-81

THREE AWARDS OF FIRST DEGREE OF MERIT—for Copying,
Black and Colored Inks, respectively.

ONE AWARD OF THIRD DEGREE OF MERIT—for Mucilage.

This last, although of the Third Degree, was the Highest and **ONLY**
Award made for Mucilage.

No other American Inks received a higher award than the Third Degree of Merit.

CARTER, DINSMORE & CO., Boston and New York.

BYRON WESTON

DALTON, MASS., U. S. A.,

HAS BEEN AWARDED THE

GRAND PRIZE GOLD MEDAL

AND RECOMMENDED THE

Medal of Honor and Perfection

At PARIS, 1878,

This being the **HIGHEST** and **ONLY** AWARD given for

LINEN RECORD & LEDGER PAPER.

—A SPECIALTY.—

THIS Paper has received THE HIGHEST PREMIUM over all
others from the Cincinnati Industrial Exhibition, Massachusetts
Charitable Mechanics' Association, Franklin Institute of Philadelphia,
Louisville Exposition, Medal and diploma from United States Centennial
Commission, Medal of Progress American Institute, 1877, and Medal of
Improvement and Progress, Boston, 1878. Its

PRINCIPAL ADVANTAGES

are as follows:—1. It contains more LINEN than any other Ledger
Paper, has a longer fibre, and is, consequently, tougher. 2. Having a
harder and better body, it frays less in erasure, so that by simply using
the rubber after the eraser, the ink is prevented from spreading. 3. It is
more uniform in Weight Color and Finish. 4. It never cockles if properly
bound. 5. Its chemical action upon ink is such that it both writes and rules
up better. For proof of the foregoing, refer to a large number of Sta-
tioners, Bookbinders, Bookkeepers, and Recorders, who have given it,
after a severe test, the preference over all others. This paper is *Double*
Sized, and will stand any climate or the most acid of fluid inks.

Send for sample sheet, ERASE and REWRITE FOUR TIMES on same spot.
Each sheet is water-marked with name and date.

LOCKWOOD PRESS, 74 Duane Street, New York.

The American Stationer

A JOURNAL DEVOTED TO THE INTERESTS OF THE STATIONERY & FANCY GOODS TRADES

"The Stationer"—Every Thursday—\$2.00 Per Annum.

VOL. X.--NO. 3.

NEW YORK, JULY 21, 1881.

WHOLE NO. 317.

Correspondence.

BOSTON NOTES.

[FROM OUR REGULAR CORRESPONDENT.]

Boston, Mass., July 18, 1881.

The week just closed cannot be said to have been an active one, yet the volume of business done would have been regarded as a large trade several years ago. Everybody seems to be getting ready for the fall trade, and the general impression is that that trade will be the largest ever known in the history of the Stationers' movement.

Dealers are not engaged in any special movements at the present time, aside from adopting their stocks to the coming revival. I notice that, even among among the leading dealers, no stocks of very expensive kinds of goods are being accumulated. Expensive goods will be looked after later.

No definite settlement has been arrived at in the case of A. K. Loring, dealer in stationery and books. The small creditors are not satisfied with Mr. Loring's offer to his merchandise creditors, 35 cents on the dollar—25 cents in cash, and 10 cents to be in undorsed notes.

Business has become so dull on Saturday, that some of the retailers, among the stationers, also threaten to close on the afternoons of that day, during the rest of the summer.

The Boston Directory for 1881 is a fine specimen of book work. The total number of names in it is 150,493, against 143,140 in that of 1880. The contents, aside from the directory, help to make the book one of the most interesting and valuable that can be put into an office or counting room. The directory shows very little change in the location of the stationery trade during the past twelve months.

The card dealers report a very dull trade. The favorite paper for advertising cards, instead of having a column of the business, now has less than half a dozen announcements.

The Boston Post has recently made a radical change in the personnel of its commercial and financial departments. So has the *Commercial Bulletin*, the best paper of its kind published in the country.

Coming across an old almanac, dated 1849, I find there were only twenty stationers in Boston at that time. Now there are over one hundred dealers. Of the firms then in trade only four or five are now in existence or under other names, viz: Eayrs & Fairbanks, Aaron R. Gay, Thomas Groom, Benjamin Loring & Co., and Tappan, Whitmore & Co.; Benjamin Loring & Co., 120 and 122 State street, are now Hooper, Lewis &

Co., Milk street; Eayrs & Fairbanks are now James Fairbanks & Co.; Thomas Groom is now Thomas Groom & Co., at 82 State street; and Aaron R. Gay still continues business at the old stand, 130 State street. J. T. Prince used to be in business on the site now occupied by the Western Union Telegraph Company's building, at 112 State street. Among the old, well known stationers, now forgotten, were Allen & Co., Oakes & Solomon, John Marsh, Charles Stimpson, and B. Perkins & Co. I could name a single house which to-day does more business in three months than all of the Boston stationers did in one year thirty years ago.

Some novelties in albums are promised by Winkley, Thorp & Dresser in the fall.

Ward & Gay, Devonshire street, have one of the finest and best stocks of papers and envelopes in town. Their line of small blank books is also very complete.

Dennison & Co., dealers in tags, tissue papers and other specialties, anticipating an unusually large fall trade, intend to tell in a full page of THE STATIONER what they have to offer to the trade. Business is business with this house.

The two buildings for the exposition of the progress of industry, on the Back Bay, are almost completed, and will open on September 1.

L.

CHICAGO NOTES.

[FROM OUR REGULAR CORRESPONDENT.]

WESTERN OFFICE LOCKWOOD PRESS,
8 LAKESIDE BUILDING, CHICAGO, ILL., July 16, 1881.

As I have had nothing but prosperity to chronicle in the season that is past, so everything augurs prosperity in the future. Old houses speak in tones of confidence, while our newcomers smile at their encouraging success.

To a trade journal, commercial prosperity is always encouraging, for, in an enterprising country like our own, increase of trade guarantees increase of advertising. In this respect Chicago stands second to no city in the world. Our people know how to "feed the horse that carries them." In proof of this assertion, I may cite J. S. McDonald & Co., the well known manufacturing stationers, of Chicago, who are pushing the sale of their books by extensive advertising in the great daily and weekly papers of the country, causing an inquiry for their goods among all classes of business and professional men. This they supplement by advertising in THE STATIONER, informing the trade where their goods may be purchased. Their extensive and growing business attests the wisdom of this course. Advertising by circulars is played out,

they say. There are few stationers in the country with the pluck to invest \$1,000 in a single month's advertising; yet I suppose it must pay, or an experienced advertiser like Mr. McDonald would not undertake it. I heartily commend his example to others in the trade, more especially to my recent fellow-townsmen of Philadelphia, whose want of enterprise friend Viennot justly deplores.

The Mackinnon Pen Company, in the person of S. S. Scott, manager of the Chicago branch, has displayed commendable energy during a month or two past. The company is now running "under full steam" two agencies in this city, both equally successful. This firm is another that understands the art of advertising. As a result, Mr. Scott showed me last week an order from a Chicago house for over two hundred Mackinnon pens, of which half were to be "Sovereigns," all to be delivered immediately. Mr. Scott has also taken orders for two hundred and seven pens in a single day; and in four consecutive days his sales have amounted to a couple short of four hundred pens. The stylograph, as an article of necessity, may be considered finally established.

The celebrated Tuerk water motor, thanks to liberal advertisement and a really meritorious machine, is steadily gaining ground. THE STATIONER is complimented by the firm for having placed it in communication with purchasers all over the continent, several large sales having been already affected through this journal's mediation. The motor is now used, besides others, by the following parties for running presses: H. C. Foreman, Chicago, No. 10; Index, Evanston, Ill., No. 4; Day & Joy, Sacramento, Cal., No. 4; R. W. Bancroft, Wilmington, Del., No. 4; Junction Printing Association, Ogden, Utah, No. 5; Daily News, Emporia, Kan., No. 5; Express, Tioga, Pa., No. 5; Republican, Paris, Ill., No. 5; Transcript, Golden, Col., No. 5; Standard, Cedar Rapids, Ia., No. 6; Register, Rockford, Ill., No. 6; Tribune, Tiffin, O., No. 6; Sun, San Antonio, Texas, No. 6; Republican, Marshalltown, Ia., No. 6; Chronicle Publishing Company, Leadville, Col., No. 6; Gazette, Colorado Springs, Col., No. 6; Seneca Advertiser, Tiffin, O., No. 6; Argus, Burlington, Ia., No. 5; Constitution, Keokuk, Ia., No. 6; Seemans & Peters, East Saginaw, Mich., No. 6; Tinglee & Brownlee, Marion, Ind., No. 6; Register Printing Company, South Bend, Ind., No. 6, driving four printing presses; formerly used a 4-horse power engine; Hurley Brothers, Bay City, Mich., No. 6; H. H. Everhard & Co., Kalamazoo, No. 7, driving four presses and paper cutter; Capital Publishing Company, Des Moines, Ia., No. 11, with governor; Pioneer Magnet, Big Rapids,

Mich., No. 12, with governor; *Gazette*, Niagara Falls, N. Y., No. 12, with governor.

Mr. Farnham, inventor of the "Armaline," advertised in your columns, is a born inventor; and, more than that, a valuable one. His latest is the "Perfection Arm-Rest and Wrist Supporter" for writers and telegraph operators. In order to prevent weariness and fatigue, book-keepers and others writing seek a rest for the arm and wrist by holding a book or thin board under the arm. This, of course, answers the purpose to a limited extent, but the "Perfection" is worn on the arm, and meets every requirement. It does not hinder the movements of the arm; on the contrary, it assists in writing with the pen and facilitates sending on the key, supporting the arm and wrist, and thereby relieving the strain upon the muscles necessary to manipulate the hand unsupported. Having myself tested this device, I can indorse it as an effective luxury in writing. It is made of celluloid; is very light; and as the price is remarkably low, those whose occupations expose them to the horrors of "scrivener's palsy" cannot afford to overlook it.

H. A. Taylor, manager for the Stylographic Pen Company, is now enjoying the salt sea air in Providence, his home, and would that I were with thee, O my friend. Meanwhile, the pen, under direction of Mr. Taylor's valuable assistant, continues its habitual "boom."

"Of making many files there is no end," nor will there be as long as tastes and inventive faculties differ. However, since Adams & Kimball have taken the Elwood file into their own hands, they have made it so good that it will be a pretty tough climb for the next inventor to surmount it.

Mr. Kimball, of this firm, is now in the East looking up novelties for the coming season, of which he intends securing a larger line than ever before offered by the firm, and what he does select are sure to be the finest of their kind. The new catalogue will soon be ready, and later in the season Mr. Kimball will visit the stationers of the West in person.

S. S. Stafford is displaying just now commendable energy in pushing his celebrated inks. The "Universal" ink has lately been improved, so as to strike the paper a jet black, and is therefore specially adapted for use in stylographic pens. The firm is represented in Chicago by its genial agent, W. R. Lounsbury, who is "making his mark."

From conversation with the feather duster manufacturers I learn that stock is very scarce, and unless there is a reserve stock unsuspected by them, prices will probably advance this fall.

E. P. Donnell & Co. are an exemplary firm in the way of enterprise. Not content with keeping a full line of tools, machinery, and material for bookbinders and paper box makers, they have entered the field as inventors. Of their recent ideas one is a new index roll, made of brass and supplied with rubber bands, which are easily put on the roll, ready for use, and at one-third the price of the brass index roll. Another is their "Perfection" book finisher's gas stove, the only finisher's gas stove made purposely for binders. It is claimed to produce more heat than any other gas stove. The gas is filled with oxygen, which gives the pure blue flame without smoke, thus saving both gas and time. The burning roll frame is of the strongest, while the pallet or gold roll has an even heat. The type is also protected from the flame while using the pallet. It is very simple, strong and will last for years. Still another is their automatic beveling machine for book-backs.

All these are useful and valuable tools which the trade will appreciate.

Mr. Bingham, printers' rollers, has recently removed from 151 and 153 Fifth avenue to larger quarters at 200 and 202 Clark street. He announces a slight advance in prices, necessitated by a rise in price of materials.

H. Hartt is making a great success with the Scott web press here in the West. So much so that he has closed a contract which gives him sole control of all of the territory between Cleveland and Denver and from New Orleans to the north pole, at which latter point he intends "planting" an agent.

Dunwell & Ford's latest, the military *cartes de visite*, are truly novel and exquisite. Nothing could be more *recherché* for the dashing young militiaman who cannot always wear his "straps." The "strap" in the corner of the card serves the same purpose, and insures his proper title.

Mr. Holmes, from the Economy Company, has been in town for some time past, and though he does not like Chicago, I am sure that Chicago likes him; therefore, let him call often and stay long.

The manilla felt window shade is a novelty which fills a want. While cheaper than cloth, it is more durable. Nothing has ever been offered for the purpose more attractive in appearance. It has a soft, pliable texture, and will not ravel nor crack, and may be served like cloth; while being noiseless in its operation gives it a signal advantage. It is furnished by the Manilla Felt Shade Company, 134 St. Clair street, Cleveland, Ohio, in rolls of fifty yards each, thirty-eight inches wide, with a selection of ten desirable colors.

The Walke Pen Company, of Hamilton, Ohio, and 853 Broadway, N. Y., offers something new in the way of fountain pens. While ordinary stylographs are useless to phonographers, the Walke pen is just what they want. It is made with one of John Holland's finest gold pens, shades perfectly, and those who dislike the stylograph cannot do better than to examine the Walke patent.

Oliver Braden, representing Thos. Dando & Co., sauntered pleasantly into this office one day last week. Mr. Braden had a headache at the time, so I did not "interview;" but as he has a large set of new samples in his trunk at the Palmer House, I think I shall be able to "see him later."

In albums and Bibles nothing finer has been shown me than the imported stock of Baird & Dillon. These gentlemen "mean business," and they have the means to mean it successfully. If their line does not sell "like hot cakes," there will be one Chicago "newspaper man" astonished anyway.

G. H. Taylor & Co. are doing an immense business in paper napkins; and so popular are these goods becoming that a stationer who does not keep them is behind the times.

Geo. J. Schmidt & Brother, know how to get up wicker ware. One who has never seen it would not believe how tastefully these goods can be made; and to what various uses the materials can be put. Take the word of one who knows, it will pay the dealers to send for catalogue and prices.

Treleaven's gold pens are gaining a fine reputation all over the West. Not only is Mr. Treleaven without a rival in Chicago, but it would be pretty hard to find his superior anywhere.

The type-writer is now an article of familiar use. Wherever much writing is done, there its busy click-click may be heard. It is as familiar in the West as in the East, and this fact is due

chiefly to the efforts of the Chicago agent, Mr. Unz. It is worth sending for the new catalogue, just to see the cover design, of which I have before spoken.

Kingsley's "Papioflora" has gained ground very rapidly, and during the late Sängerfest became very familiar to promenaders on every street. But I doubt if one out of twenty would have believed, after the heavy storms, that these beautiful and durable garlands are made out of paper. Cloth and bunting side by side with it were bleached by the rain and evergreens wilted in the sun, but the "papioflora" remained as fresh the day it was taken down as at first.

Sitting with an easy conscience at my desk, the other day, I was surprised by a Herculean grip upon my shoulder. Naturally, as I looked around, my peaceful demeanor fled. Was my visitor a madman or a policeman? Events revealed. After undergoing the most fearful contortions of countenance, my visitor finally succeeded in ejaculating "Eureka!" and dropped into a chair, overcome by his efforts. At last, however, the spasm relaxed, and with the returning placidity of features I recognized my friend L. W. Noyes. "By Jove," said he, "that word almost choked me; but I got the best of it." "What then have you found?" I tenderly inquired. "An improvement on my dictionary holder," he replied. Seeing my look of incredulity (I did not believe improvement possible), he went on to explain that in the new device the book, in being opened, is also raised at one end so as to incline toward the reader—a truly desirable improvement. "Now lettest thou thy servant depart in peace," said Mr. Noyes; and he departed silently and mysteriously as he had come. But I fancy the trade is going to hear from him ere long.

E. N. Fay, sole manufacturer of Wilder's celebrated liquid slating for black-boards, has recently removed from 106 Fifth avenue to 162 Washington street. The compound is constantly growing in favor, and numerous letters from teachers and directors of schools testify to its merits. Mr. Fay offers to guarantee every gallon bought from him to give satisfaction, and he means what he says. This slating is used exclusively in the school rooms of Chicago, and gives perfect satisfaction.

The Council Bluffs *Nonpareil* says:

During the past year or more, it has become evident to the management of that popular and enterprising railway company, the Chicago and Northwestern, that in order to be up with the times and to meet a popular demand in these days of railroad luxury, it would be necessary to exchange the Pullman hotel cars, used for some years past on the Northwestern, for the celebrated and now almost essential dining cars. As a result of this conviction, and with a view of fully meeting the demands of a traveling public, the company, some months since, began the construction of four elegant dining cars in their Chicago shops, to be used on the line of the road between Council Bluffs and Chicago. Neither time nor money was spared in building and furnishing four cars of this kind, which, for elegance, completeness and attractiveness, are certainly nowhere excelled. The "Delmonico" is the name of the car to be run between this city and Denison, on express trains, daily. It is finished in the most attractive and durable manner throughout. The exterior is of a rich dark wine color, with gold finish and appropriate lettering. The interior presents an appearance of unusual cheerfulness and home-like arrangement. The "Delmonico" is certainly as handsome a car of the kind as was ever built, and is as elegantly and completely furnished. Meals on the new cars are served for seventy-five cents each, and a new feature has been introduced—that of furnishing lunches for the accommodation of passengers, at prices corresponding to the refreshments ordered.

I wish to call attention to the advertisement

of "Stationer," which appears in these columns. He is personally known to me, and I consider this a good chance for a manufacturer or jobber to secure the services of an experienced, reliable and steady young man. G. B. H.

PHILADELPHIA NOTES.

[FROM OUR REGULAR CORRESPONDENT.]

PHILADELPHIA OFFICE OF THE LOCKWOOD PRESS, }
407 Walnut Street,
PHILADELPHIA, Pa., July 18, 1881.

Although we are at the dulllest moment of the season, the present time is one of the most important in the whole year for business, because the trade begin to see what the prospect is for the next season's sales. Acting on the idea, I take advantage of the fall number of THE STATIONER to give a short review of what the principal merchants and manufacturers in the trade in this city are doing.

A. M. Collins, Sons & Co. are very busy—more so than during any previous year at this season. They can, therefore, pretty accurately foretell that their fall trade will be equal to anything they have had.

J. B. Lippincott & Co. have entirely changed the arrangement of their stationery department. The present arrangement, comprising three floors of the building, is about perfect, enabling a customer to take in the entire display at a glance. The present stock of this well known firm is really enormous, and complete as have been its lines in previous seasons it has been nothing to compare with its present stock.

Kline, Miller & Co., who commenced quite small, have gradually increased their paper business till, as I announced in a late letter, the firm has taken an entire building on Seventh street, and to-day, judging by the size of its business, it may be counted among the largest paper houses in the city.

George McDowell & Co., whose business has considerably increased during the year, are doing better than they hoped for in their new quarters. The stock is very large, but they already see that they will be obliged to double the orders they have given.

Moss & Co. have a splendid assortment of Christmas and New Year's cards, for which they are now taking orders. Their stock of fancy goods is very complete, and chosen with excellent taste.

William Mann expresses himself as well satisfied with business in Philadelphia, and the New York branch of the house has had a success entirely unlooked for.

William F. Murphy's Sons, whose principal business is done with banks and other commercial establishments, are just in the midst of the dull season. Their sales up to the present time have been very satisfactory.

Langfeld, Turner & Andrews have already taken more orders for the coming season than at any similar time in preceding years. Their Southern business particularly has increased greatly. In one day Mr. Stone, one of their travelers, sent them twenty-one different orders.

Your readers will find information of utility and interest in the description, in another column, of the various fine leather goods manufactured by William A. Haines, of Philadelphia. Mr. Haines, though not a very old man, is a veteran in his business, and his long experience enables him to exactly meet the varied requirements of the trade.

C. F. Rumpp, who has an established reputation for the excellent quality of his manufactures, has surpassed himself this year, and shows the finest samples it is possible to see. The orders he

has already in hand indicate that he will have an exceptional fall trade.

Janentzky & Co. have more demand than ever for their artists' materials, and it appears that they will have no dull season this year. Their papiermaché plaques have met with great success.

Potsdamer & Co. report that with the additional machinery now being placed in their factory. They will be able to clear up their present orders by October 1. In another column will be found a description of the fall novelties manufactured by this firm.

Marcus Ward & Co. report that they have taken more orders for their birthday, Christmas and New Year cards than during any previous year. Their line of samples is exceptionally good, and is very highly spoken of.

Charles L. Baker and Oliver Bladen, representing Thomas S. Dando, of New York and Philadelphia, are both on the road. The former is traveling through Pennsylvania, and the latter is taking the principal cities in the West. They report sales good, and the trade who have not yet seen their line will do well to wait for them. Those who have seen the samples say that they are the best line of Christmas and New Year cards on the road. A full description of these goods was given in THE STATIONER of June 2.

Charles Beck has a complete assortment of chromo advertising cards. His travelers are en route, and report themselves well satisfied with their sales so far.

Theo. Leonhardt & Son continually receive consignments of French advertising cards, which are sold as soon as they arrive. They expect by the next steamer an invoice of the very latest novelties in their line, a great part of which is already sold.

T. Sinclair & Son, who have recently doubled their means of production, find themselves again pressed with orders, and report a large sale of their advertising fans, which they supply in seven new and elegant designs. These are printed to order in lots of 50,000, and furnished complete with polished black handles. Their chromo card department is full of novelties in advertising cards.

Turner & Harrison, the well known pen manufacturers, have about as much as they can do to keep up with their sales; and the Warrington Steel Pen Company reports a similar state of affairs.

H. L. Lipman, manufacturer of Hoyer's manuscript paper, announces that the sales of this specialty continue to increase daily. Stationers who are disposed to push this article will be given the agency for a reasonable territory, and special terms and inducements. As the paper is really a good thing, this is an excellent occasion for the trade to take hold of it.

Charles H. Sherman & Co., successors to John W. Gladding, now have their line of samples ready for next season. A considerable number of sales have been made, and everything is promising. Samuel M. Simons (whose name was erroneously printed in the last number of THE STATIONER) is a valuable and efficient aid in the conduct of their business; his acquaintance with the manufacture of their specialties and with the customers of the house will prove of immense assistance in replacing the firm in the position it occupied at the death of Mr. Gladding.

The Novelty pen clip, manufactured by the Philadelphia Novelty Company, has taken its place as a staple article of stationery goods. One filling writes a page of foolscap, and it is a convenient substitute for the more costly stylographic pens, its low price permitting sale in many cases where the former would not be

bought. The same firm manufactures a portable shelf bracket which answers many purposes about the house. JULES VIENNOT.

MONTREAL NOTES.

[FROM OUR REGULAR CORRESPONDENT.]

MONTREAL, July 13, 1881.

Trade is fair and has been very good. With most of the stationery, paper and fancy goods houses this is, of course, the holiday time, when trips to the country and excursions to the sea, and all that sort of thing, are *en règle*.

There are not any changes to note worthy of comment. Nearly every one is satisfied with the business done so far this year. The paper makers are full of orders.

A. Buntin & Co. are away behind in orders and cannot promise to turn out new lots for some time, and this notwithstanding recent additions and improvements.

The Canada Paper Company reports a like good state of affairs.

John Crilly & Co. are busy at their Joliette mills. They are making very superior manillas and show a splendid No. 2 printing. Their blottings are very excellent and command a ready sale.

J. C. Wilson & Co. have kept their mills going on bag and flour sack manillas for their own consumption ever since they started, and have not commenced making for sale as yet. They report business as A1.

Dawson Brothers, our leading booksellers, are going more into the stationery part of their business, having leased the adjoining store, and are fitting it up for the blank book and stationery department in grand style. They will have a magnificent show window. Montreal ought to support two large establishments of this kind.

G. W. Clarke, fancy goods and notions, has also been doing something big. He has now the largest store of the kind in the province, and has it well stocked with the choicest goods. From a small store 12 feet by 20 he has, by his attention to business and honest dealing, got to his present well established and first class business. His store measures about 50 by 80 feet. It is a perfect bazaar.

J. W. Clarke (brother of G. W.), is doing a fine business up near the Windsor Hotel. Fancy goods must pay well.

C. Hill, bookseller, made a good move this spring by going to Phillips square. This old established business loses none of its power by its old age. Mrs. Hill is as genial and pleasant as ever, and keeps a good assortment well up to the times. Mr. Hill, although not able actively to attend to matters in the store, is still at the helm, and has a pleasant word and welcome for callers.

R. N. McCallum, fancy goods, just around the corner from Mr. Hill's, is doing a good, safe and profitable business.

Rice, Sharpley & Sons, wholesale and retail fancy goods, jewelry, &c., carry an immense stock in their magnificent large store. You can find almost anything in their place of business. The firm is a very old-established one. I remember it when I was a boy.

J. M. O'Loughlin, retail books and stationery, reports a good business. He has a neat, tidy little shop, and is not at all behind the times.

Akerman, Forlier & Co., J. Parslow and others report trade as good.

Geo. J. Gebhardt & Co. the lithographers and playing card manufacturers, who went into insolvency last month, are to be sold out, and possibly their business will be bought up by a syndicate and converted into a joint stock company.

The business is still working under the assignee and trustees.

William Drysdale & Co., booksellers and stationers, have nothing to complain of, they say, and are well pleased with the year's business so far. They are the second largest book house here.

Morton, Phillips & Bulmer, stationers, blank book makers and printers, are busy in all departments, and speak of better things than they have known for years. They employ now a round fifty and keep them going all day, and sometimes at night.

We had a very pleasant flying visit from A. G. Elliot and wife, of Philadelphia. Mr. Elliot expressed himself highly pleased with our city and its beautiful location. He is a genial, well informed gentleman. I wish that his stay had been longer than it was.

Dockrill, of L. W. Fairchild's, Hyman, of the Eagle Pencil Company, and A. A. Andrews, of Holyoke, have called during the month.

Perhaps I have spun out my yarn longer than your readers will care to peruse. I have kept so silent, that when I begin it is hard to stop. I must say adieu, for it is terribly warm, yes hot! More anon. C.

CINCINNATI NOTES.

[FROM OUR REGULAR CORRESPONDENT.]

CINCINNATI, O., July 18, 1881.

The best promise for prosperity of the season has been apparent in business here during the past three days. Since last Friday the weather has been extremely pleasant, not only by contrast with the unmerciful scorch of the ten days previous, but *per se*.

I have been coolly informed that the trade here has a better outlook than it did at this time last year, and last year was a "boomer." Perhaps a boomerang for its life is about to return in trade. The general testimony is that sales are remarkably good at this moment, and that the fall trade will be heavy. Some men will cast an eye over the shoulder upon the crop prospects, but good crops are now pretty well assured, and buyers will proceed in earnest.

Pounsford & Co. are doing a lively business in archery goods, the demand for which is a growing one.

Robert Clark is fairly installed in his new store room, which is an addition to the store he has occupied for many years, in Pike's Opera House building. It gives him a double front, and adds greatly to the appearance of the establishment. This addition is used for law books.

Peter G. Thompson will, this fall, print and publish the "Battle of King's Mountain" by Lyman C. Draper, of Wisconsin. It will be quite a book. Mr. Thompson has issued several works, and they have all been in good style—examples of typographic skill.

Russell, Mangan & Co. have begun, on a large scale, the manufacture of playing cards. This industry was formerly carried on by Langley, but was abandoned. It is now backed by capital, pluck and energy and the best mechanical appliances.

John Beeler, formerly of Beeler & Curry, afterward Beeler & Co., is out of business. He has an extensive acquaintance in this region, and will probably travel or take employment as a salesman.

E. M. Johns, for many years of this city, has retired from business on his own account and has obtained employment in St. Louis as a salesman.

The following named visitors have been here

during the past week: Frank E. Ganders, with Tower Manufacturing Company; Mr. Allen, of Daniel Slot & Co.; Mr. Cooke, of Cooke & Cobb; G. H. Graves, of J. D. Whitmore & Co.; J. B. Gunn, of Eberhard Faber, all from New York; Geo. W. Cross, of Saugerties, N. Y.; Mr. Closson, of Plimpton Manufacturing Company, Hartford, Conn.

Mr. Thalheimer, of Van Antwerp, Bragg & Co., and Mr. Yiezer, of W. B. Carpenter & Co., of this city, have returned from their vacation recuperated.

Henry Snider, of Snider's Sons, starts on his vacation to-day bound for the mountains and the sea shore. Take him on the wing when he reaches New York.

There was no surprise here in the intelligence of the new combination and the advance in prices of envelopes. It was anticipated. Carpenter bought several millions on his foresight.

PRINCE WILLIAM.

OUR LONDON LETTER.

[FROM OUR REGULAR CORRESPONDENT.]

5 LUDGATE CIRCUS BUILDINGS,
LONDON, E. C., July 1, 1881.

Glorious weather helps to modify the stagnant condition produced by slack and uncertain trade. The summer trade is looking up, and most of our leading houses are busy. Retailers, however, complain of very slow business and a great indisposition on the part of the public to spend money.

Except with reckless people, money is certainly very tight here. There is plenty to be found, but it has to go into pretty sure direction before people will part. Retailers last year and the year before found out that laying in a heavy stock was a ruinous risk to run, even though Christmas cards are tolerably certain stuff. It often happens that a sure line may, at the momentary caprice of the public, be turned into a dangerous spec, for, so far as a stationer's business is concerned, fancy rules the tide of trade.

Popular taste can never be controlled. The smallest thing will alter and derange it. This makes all fancy trade somewhat risky and open to speculation. To properly manage such business requires great tact and close observation, as well as a minute knowledge of the ins and outs of business, only perhaps to be acquired after long experience. Stationers, as a rule, don't seem to know or study these points. They go on rule of thumb to a great extent, and trust that last year's profits may be repeated by a repetition of last year's system of purchases. This is not always safe, as every year produces marked changes in the stream of business.

Christmas cards at present seem to be the absorbing item of enterprise. When one thinks of old times, before such things were known, it is puzzling to imagine what sort of trade could be done without Christmas cards. I can't understand this trade at all. Prang & Co.'s example of a prize competition for designs in Xmas and New Year's cards has been followed here by two firms, each of which has given over £2,000 for prizes. If one firm did the trade, £2,000 might be profitably spent in such a course; but when there are in London alone twenty or thirty firms, all hard at the same thing, it is a queer thing to me how it can pay to spend £2,000 in designs for the production of a line of goods so cut by competition.

And then the enormous discounts allowed by the trade must be taken into consideration. I should say, taking it all round, that 4d. was the average retail price paid for Christmas cards.

Some folks pay 1s. 2d., fewer people pay 1s. 6d., whilst a few specimens of four-footed humility give 2s. and 2s. 6d. each for their season's offering. The majority don't go further than 2d., a considerable number buy one pennyworth of Xmas cheer, and the rag tag and bobtail consider a half penny quite sufficient to spend upon such a delicate compliment. Taking 4d. as the figure all round and the discount at 50 per cent., it will take somewhere near a quarter of a million cards to represent the amount offered for prizes, without considering one penny for cost of production and other expenses.

There is no doubt that the complimentary card trade is a very big business here, now. Such houses as De La Rue, Goodall, Marcus Ward—about the only houses who do the entire work of a Xmas card here in Great Britain—do not offer prizes and yet sell by far the largest numbers of cards. How it can pay people to offer such large sums as £2,000 for designs and pay foreigners to print the cards, I can't imagine.

The other item in our trade being rushed just now is the note paper packet. Every conceivable species of note paper has been offered to the public. Firms have ordered some specially prepared paper, either as to surface or color and have tried to induce trade upon all kinds of pretexts. Some say that a laid paper is not so good for writing as a wove. Some go for rough surface, others for finely calendered, in each case the extreme being actively pushed. Then some folks prefer cream, and others white, whilst stationers have not failed to introduce semi green, neutral tint and other fanciful colors, as being less injurious to the eyes.

As to wove and laid, there is a great difference of opinion, each disciple naturally swearing by his own idea and business aim. For my part, I prefer a plate glazed laid, more for the look of the thing, I confess; and there is a great deal in appearances. The wood men say that their paper is easier and better altogether to write upon. This is a mistake, as any paper maker knows; especially if a laid writing be calendered. There are many people who prefer steel to quill pens. For people who can't write the "J" a pen has been specially designed, and people who write with a stick can't well be considered judges of paper. Some people prefer a very fine pen, and to these Joynson's super-calendered writings will naturally commend themselves. How many stationers know the difference between wove and laid papers? I went not long ago with a big order for envelopes to a large wholesale house in London. My sample was a laid envelope paper, friction glazed. I was told that the firm did not make "wove" envelopes! Many people imagine that surface has all to do between laid and wove. Of course, this is an error, although there is much room for the mistake.

The rough or "plowed field" papers have followed the introduction of broad-pointed pens, naturally. The "J" pen has created many papers, I believe. Most of these rough papers are ordinary machine-finished laid papers, but, I think, a little glazing would improve them, even for a rough pen. The colored or tinted papers are mere quibbles and not worthy of consideration. They may be of some service to the eye, but people who write much do not write upon writing paper. Correspondents (and journalists) to the press have to use some very common E. S. paper, such as the sheet I am now writing upon, and you don't catch any stationer obliging us. Such is public fancy, capricious and, like the ladies—

"Uncertain, coy, and hard to please."

However, there is much in it. People had to

live by and upon it. Many firms puzzle their brains from week to week to manufacture baits whereby to catch the trade of the day. We are very enterprising in our days, but mixed up with the enterprise is a vast amount of what I should call—humbug.

The Exhibition is our next event. THE AMERICAN STATIONER will have a prominent position on "Paper Making" stall, and I have no doubt will be an attraction in itself. There will be a large attendance, although I am sorry to know that a numerous contingent of visitors from your side sail on the opening day by the Britannic for home.

I may tell your readers that I signed an agreement, as editor, with the proprietor of a new journal to be published here on the 15th of each month, commencing with August next, for stationers. I shall bear well in mind the excellent model of THE AMERICAN STATIONER, and nothing will be left, so far as money and brains are concerned, to make the *English Stationer* a good medium and free from puff and tomfoolery.

W. F. C.

AMATEUR BLOW-PIPE.

For soldering small articles of jewelry the common blow-pipe, such as may be bought at any tool shop for about sixpence, is used. The solder is sold at dealers in jewelers' requisites, ready for use. Several sorts are used—silver solder for silver goods, in different qualities, to suit different qualities of work. You have only to specify the purpose for which you intend to use it when buying, and the correct quality will be given you. Gold solder, to be used for gold jewelry, is subject to the same condition. The quality of the solder is always a trifle less than the metal on which it is to be used. This is necessary, in order that the solder may melt before the article does. The flux used with both gold and silver solder is borax. Working jewelers generally rub a lump of borax on a piece of slate with a few drops of water, just as water-colors are ground, to a cream-like consistency. The solder is scraped clean, to remove all trace of oxide, cut into little pieces, and mixed with the borax. The actual process of soldering will be modified to suit the peculiarities of the article which is to be treated. Usually the edges to be soldered are cleaned, wetted with the borax fluid, and placed closely in contact. If possible, the article is bound tightly together with binding wire. This fine wire of soft iron, made specially for such purposes. A piece of pumice stone or charcoal is used to rest the work on while it is being heated. It is laid on this, with the joint uppermost; a few pieces of solder and a little borax are placed along the joint, and the article is ready for being heated. So long as there is sufficient for the purpose, the less solder and borax used the better. Gas is generally used for heating with; but, failing that, a spirit lamp will answer for all small work. A small lamp suited for the purpose, to burn methylated spirit, can be bought for a shilling. With the blow-pipe direct a jet of flame along the joint, at the same time heating the entire article till the solder runs; then the soldering is accomplished.—*Design and Work.*

In Moscow there are in all 372 printing establishments, lithographic offices, and foundries for casting type. According to recent statistics, there are 202 machine printing presses, 20 of which are used for the manufacture of playing cards, &c. There are 158 hand printing presses, 147 machine lithographic presses, 464 hand presses, 127 paper cutting machines, and 47 for casting type.

L. PRANG & CO.'S

Christmas and New Year Cards

ANNOUNCEMENT.

WE hereby beg leave to announce to the trade the completion of our line of Christmas and New Year Cards for this season, for which our agents are now soliciting orders. The extent of our list, the originality, and especially the American character of our designs, together with the great care taken in their execution, will, we have no doubt, secure for our goods the popularity which they have enjoyed heretofore. The efforts we have made to secure the highest excellence, is attested by the names of some of the artists whose designs have been reproduced. We would only name Elihu Vedder, C. C. Coleman, Thomas Moran, Miss Rosina Emmett, Miss Dora Wheeler, Mrs. O. E. Whitney, W. H. Gibson, F. S. Church, R. G. Birch, &c. That a due regard has been paid for the quality of the literary matter, in connection with these designs, is shown by the fact that many of the designs are accompanied by original poems from writers of note, such as Mrs. Celia Thaxter and Mrs. Emily Shaw Forman.

The great increase of our manufacturing facilities, secured by additions to our building nearly doubling our floor space and by the adding of new machinery, will place us in a position to fill orders promptly. Still we would request dealers to place their orders as early as possible, so as to still further enable us to make timely preparation for prompt deliveries.

Our Cards will, as heretofore, be put up in envelopes containing twelve Cards, unless otherwise stated on our price lists.

We furnish envelopes without extra charge for all our Christmas and New Year Cards, for which the list price is \$1.80 per set, and over. Our silk-fringed Cards will no doubt be in great demand this season. We have made ample preparation to furnish these in time and have made arrangements with our manufacturers for the best quality of silk fringes. We would call special attention to the excellence of our fringed Cards and the novelties in colors and style of fringes we offer for this season.

A marked and attractive feature of our cards are the elegantly ornamented backs.

All our fringed Christmas and New Year Cards are furnished with envelopes and protectors, so as to insure safe transportation in the mails.

It will be impossible to embody our whole list in the space of the advertisement, and we will therefore merely give a general outline of the variety offered.

PRANG'S PRIZE CHRISTMAS CARDS.

COMPETITION OF 1881.

These are the Cards selected by the judges in the second competition for four designs of Christmas Cards, for which we offered \$2,000 in prizes of \$1,000, \$500, \$300 and \$200 respectively. At the recommendation of the judges, Messrs. COLEMAN, LAFARGE, and WHITE, the prize for third best Card was increased to \$500. Mrs. CELIA THAXTER has written appropriate verses for each of the designs.

- 1st Prize Card (\$1,000), by Elihu Vedder. Size, $6\frac{1}{4} \times 9$ inches; price \$1 each. Same card with silk fringe, cord and tassels, price \$1.50 each.
- 2d Prize Card (\$500), by Miss Dora Wheeler. Size, 7×9 inches; price 75c. each. Same card with silk fringe, cord and tassels, price \$1.25 each.
- 3d Prize Card (\$500), by C. C. Coleman. Size, 7×9 inches; price 75c. each. Same card with silk fringe, cord and tassels, price \$1.25 each.
- 4th Prize Card (\$200), by Miss Rosina Emmett. Size, $5\frac{1}{4} \times 9\frac{1}{4}$ inches; price 60c. each. Same card with silk fringe, cord and tassels, price \$1 each.

The Prize Cards can also be had mounted on heavy board with gilt beveled edges.

We beg to call attention also to the following publications for New Year and Christmas:

- "Goddess Fortune" New Year Card, by Elihu Vedder. Size, $6\frac{1}{4} \times 8\frac{1}{4}$ inches; price 75c. each. Same card with silk fringe, cord and tassels, price \$1.25 each.
- "Christmas Dove." Size, $7 \times 9\frac{1}{4}$. This card is in the same style as the success of the last Easter season, the "Easter Dove." Price 60c. each. Same card with silk fringe, cord and tassels, price \$1 each.

Our Regular Line of Christmas Cards consists, among others, of the following Series:

- Nos. 901, 902, 903, 906, 909, 910. Floral designs ranging in price from 20c. to \$1.20 per set of 12.
- Nos. 904, 905. Humorous Cat and Frog Designs, 60c. per set.
- No. 907 is a new series of Horseshoe designs, 75c. per set.

- Nos. 920 and 929. Children's designs, at \$2.40 and \$3.60 per set.
- No. 922. Shells of Ocean, with figures, \$2.40 per set.
- No. 924. Fans with silk fringes, \$3 per set.
- No. 933. Bric-à-Brac designs, very rich, \$6 per set, and many others.

We offer a similar assortment of New Year Cards, but would call special attention to No. 1330, a new folding calendar, at \$2.40 per set. Most of the Numbers can be had with silk fringes ranging in price from \$2.25 to \$12 per set. Stock will be ready for delivery September 15.

Besides the above, attention is called to our New Birthday Cards, Scripture Texts Cards, New Panels, New Water Colors, by Thomas Moran, and other publications. Our line of Thanksgiving Day Cards will also be shown by our agents.

Trade Novelties.

[We will be glad to receive samples of all novelties issued in the trade, and will notice all such which possess merit free of charge. It is desirable to accompany descriptions with cuts whenever possible.]

POCKET HEAD REST.

The cut illustrates Taylor's Pocket Head Rest when folded up for stowing away in a pocket or satchel, the drawing being one-third of the actual size. People who have occasion to travel will be able to realize the convenience of a light, portable article like this. It is also adapted to be used on any style of chair. It is to be had of R. G. Hutchinson New York.

MAGNUM BONUM RULER.

Herewith is given an illustration of a ruler invented by J. H. Brown, with Willy Wallach. This ruler is thought to be adapted to the requirements of all who use rules, and its utility can be easily estimated. It is an ebonized roller, adjusted within a metal casing, which presents a smooth ruling edge, the roller raising the ruler above the paper sufficiently to avoid the risk of stains if properly handled. The handle gives the person using it firm control of the ruler and helps to avoid the mischances which occur from the slipping which sometimes occurs. The metal part is of brass, nickel plated. F. A. Farrell, New York, is the manufacturer.

NEW PATTERN EMBOSSEUR.

The new Pattern Embosser is designed for lettering, stamping and small embossing. It is said to be superior to any hand machine, as it is worked by foot power, allowing the use of both hands. It can be used with steam or gas heat, by means of an attachment accompanying each machine. Stamping can be done after the book is made. This is said to be the only embosser worked by foot power only that will work on a book after it is made. It can also be used for stamping hat felts or boot tops after they are made up. It is supplied with a box pallet ready for use. E. P. Donnell & Co., 182 Monroe street, Chicago, are the manufacturers.

COMBINATION BOOK.

The drawing of the patent Combination Book given herewith illustrates a new device appli-

MAGNUM BONUM RULER.

cable to diaries, pocket records or memorandums. This combination consists of a case in which is inserted a thin, flexible diary or other memorandum book, which can be taken out for use and returned without disturbing the contents of the inner pockets which are covered by the flap.

The pocket record has a new and ingenious self-dating arrangement, and it is said that it will never go out of date, but can be used at all times of the year. This book is made by the Arms Pocketbook and Diary Company, Hartford, Conn.

NEW PATENTS.

No. 244,024. Combined Printer's Chase and Stereotype Frame.—Richard Atwater, West Meriden, Conn.

No. 244,043. Christmas Tree Candle-Holder.—James W. Geddes and Alexander Geddes, Baltimore, Md.

No. 244,049. Check Book.—Benjamin Greensted, Carbondale, Pa.

As a new article of manufacture, a check book having upon its check stubs a coating of adhesive matter, whereby each detached check, when returned, may be reattached to its book proper and at its original location.

POCKET HEAD REST.

No. 244,053. Printing Press.—Frank A. Harlow, Brooklyn, N. Y.

No. 244,129. Leather Case.—Augustus Hoff and Henry Hoff, Brooklyn, N. Y.

A leather case consisting of two sections, each made of a seamless concavo-convex piece of

NEW PATTERN EMBOSSEUR.

sole leather and re-enforced, respectively, by a leather binding and metallic frame at the edges, the sections being connected by a leather hinge stitched to the frame of one section and the body of the other section.

No. 244,132. Toy Panoramic Car.—George H. Ireland, Springfield, Mass.

A toy show car consisting of a car, open or partially open on its sides, and having an exhibition curtain mounted therein upon suitable rollers to draw it from end to end of the car.

No. 244,133. Combination Toy.—George H. Ireland, Springfield, Mass.

A combination toy consisting of three vehicles,

adapted to move on wheels, two of which together form a receptacle within which may be packed the third vehicle, together with the detachable parts of the two.

No. 244,150. Machine for Making Seamless Paper Bags.—Chauncey E. Adams, Holyoke, Mass., assignor of one-half to Jane C. Pultz, Plantaville, Conn.

No. 244,172. Hand Guide for Writing.—Leonard M. Beebe, Beaverton, Ill.

No. 244,194. Stylographic Pen.—Alonzo T. Cross, Providence, R. I.

No. 244,305. Writing Tablet.—John F. Dubber, Brooklyn, N. Y.

The combination, with the base plate of a writing tablet, of a transverse spring plate having its ends bent around and attached to the under side of the base, and its longitudinal body portion intermediate its attached ends entirely disconnected from the base and curved or bent in the direction of its length to bear on the sheets of paper, and provided at its centre with a thumb button for elevating the spring plate.

No. 244,260. Mucilage Bottle.—Edward Knapp, St. Louis, Mo.

No. 244,307. Temporary Binder.—George H. Reynolds, New York, N. Y.

No. 244,319. Fan.—Simon Scheuer, New York, N. Y.

No. 244,339. Photographic Plate Holder.—Joseph Thorpe, Jersey City, N. J., assignor to E. & H. T. Anthony & Co., New York, N. Y.

No. 244,350. Pole for Handling Pastebord Boxes.—Joseph H. Williamson, St. Louis, Mo.

No. 244,357. Photograph Album.—Edmond Binchère and Henri Cochard, Paris, France.

REISSUES.

No. 9,800. Envelope Machine.—Henry D. Swift and D. Wheeler Swift, Worcester, Mass., assignors to G. Henry Whitcomb & Co., same place. Original No., 212,634; dated February 25, 1879.

DESIGNS.

No. 12,338. Font of Printing Type.—Herman Ihlenburg, Philadelphia, Pa., assignor to MacKellar, Smiths & Jordan, same place. Term of patent, 14 years.

No. 12,357. Toy Safe.—Louis Kyser and Alfred C. Rex, Philadelphia, Pa. Term of patent, 3 1/4 years.

COMBINATION BOOK.

TRADE MARKS.

No. 8,455. Writing Paper of all Kinds.—Z. Crane, Jr., and Brother, Dalton, Mass.

"The device or picture of a spinning wheel."

No. 8,458. Lead Pencils.—Eberhard Faber, Port Richmond, N. Y.

"The arbitrarily selected letters and word 'Star.'"

The grapho-stereoscope is a new combination of the graphoscope and the stereoscope in several sizes and styles. Some new things in stereoscopes have also been brought out. Descriptions and illustrations of these goods were received too late for insertion. E. & H. T. Anthony & Co. control them.

FAN.

A new device in fans is illustrated in a drawing given herewith. This improvement is the invention of Louis Jordan, and has lately been patented. The drawing represents the fan open and spread for use. The fan is of that class in which the leaf is pivoted within a bifurcated or forked handle, and it is designed for the purpose of overcoming the inconvenience which has been experienced in the attempt to disengage the fan leaf. It also provides a simple but reliable fastening device, which will release or confine the fan leaf as desired. The letter A indicates the fan leaf; B is the handle, constructed with the extended side pieces, *b b*, within which the fan leaf is pivoted at *a*. The handle is covered with Russia leather, stamped with ornamental figures.

The fan leaf is made of any suitable material (paper or muslin being usually employed), and provided with rigid side plates, *c c'*, maintained adjacent to the pivot *a* at one end, and independently engaged at the opposite end with the fastening device. The depending end of the plate *c'* is made longer than its counterpart, *c*, in order to keep it constantly connected with the holder D. By pulling down the holder the side plate *c* is released, and, the leaf being disengaged, is easily brought around by the hand in circular form to the opposite side of the holder. When fully spread, the holder is released and secures the leaf fully opened. In closing the fan the same disengagement is made, and, retracing its circular path, the leaf is restored to the handle and again secured. It will be seen that this fan opens from the side, and is not drawn out at the top of the handle. It is easily spread, and is not injured or soiled in so doing. Metzger & Jordan, New York, are the manufacturers.

face in then recoated with another layer of bitumen, which fills up all the hollows, and is then rubbed down with charcoal. All the surface is thus cleaned off, and the only bitumen which remains is that in the lines, which, though not deep, are sufficiently so to protect the substance from the rubbing of the charcoal. When this is done we have an engraved plate which can be printed from like a lithographic stone; it is

FAN.

gummed and wetted in the usual way, and it gives prints of much greater delicacy and purity than those taken directly from the bitumen. The ink is retained by the slight projection of the surface beyond the line, so that it cannot spread, and a kind of copperplate engraving is taken by lithographic printing. Besides, in arriving at this result, there is the advantage of being able to use directly the original plans and drawings, without being obliged to have re-

PORTFOLIO TABLET.

An illustration is given of the portfolio tablet manufactured by the Acme Stationery and Paper Company, New York. The drawing shows the tablet closed and as opened ready for use. This tablet is made up of a pad of fine white writing paper, ruled and neatly bound in leatherette in portfolio style. The blotter is attached to the flap or folding cover, and is thus always convenient for application to the written sheet. It is one of the best things in its way that has ever been put upon the market. It is handy for travelers or people taking recreation in the country or wherever a pad can be utilized. There are seven sizes—billet, note, letter and sermon.

Closed.

PORTFOLIO TABLET.

Open.

course to a plate taken in the camera; the latter is indispensable for printing in the usual way on bitumen where the impression on the sensitive film is obtained by means of a negative. It will be seen that this process is exceedingly ingenious, and not only is its application very easy, but all its details are essentially practical.

Some of the pyramids near Cairo, Egypt, have been recently opened by Maspero, the archaeological expert. The ones explored are those containing the tombs of the Egyptian kings of the fifth dynasty. On the mortuary chapels of these are inscriptions of small and closely written texts, which, properly interpreted, give details of the religious beliefs and customs which prevailed at the time the inscriptions were made, and which show that the previous belief on these matters is utterly at fault. The discovery is regarded as of great value to archaeologists, historians and scientists.

THE "THREE ART CRAZES."

At the recent opening of the new Manchester School of Art, Mr. Horsley, R.A., cautioned those present against any devotion to "art crazes." There were three kinds of art crazes—the classic, the mediæval, and the æsthetic. The classic craze was a very remarkable thing. There was a curious and purely heathen element among the art desires of a great portion of our people, which, when one thought about it, appeared absolutely absurd. There were men who believed the only way of resuscitating "high art," as they called it, was to go back thousands of years, and do as the artists did at that time. They seemed utterly to forget the principle upon which the great men of those days acted, and which utterly confuted those troubled with the classic craze. The great masters of antiquity never went groping thousands of years in the past for their inspiration; they never looked so far back in the past for their subjects, but they took the very incidents of the moments and the time in which they lived. They illustrated their own religion, their own history, their own poets; and when Manchester men arrived at the period when the walls of their buildings came to be decorated in the way which he had indicated, they must appeal to the public by giving to them subjects with which they would entirely sympathize. As for the mediæval craze, that could be most fully illustrated by the church architecture of our time, which was the reproduction of the past of a most blind kind. The Gothic church was to him the most perfect emanation of human genius, being so exquisitely beautiful in itself, and so admirably adapted to the purpose for which it was designed; but that which was fully adapted to the wishes of the people four or five centuries ago was utterly unadapted to our own. We had now churches in which a very large proportion of the congregation could neither see nor hear. He spoke most feelingly on that subject, for he had been literally driven out of his parish church, because in the seats assigned to him he could not see and

could not hear anything. The clergyman had arches on the right of him, arches on the left, arches before and arches behind him; the result was that his voice was utterly swallowed up in them, and many of the congregation did not hear a single word distinctly. He hoped to see the time when that question would be taken up, for it was a question that art schools might deal with thor-

oughly and effectually. Mr. Horsley observed that he had better not say anything upon the æsthetic craze, lest he should give offence perhaps to some of the ladies present. The talented artist wisely adopted the maxim "Discretion is the better part of valor," in referring to his third craze. It was rather cruel, however, to mention it without favoring his audience with a definition and opinion thereon.—*Pottery Gazette*.

To make a walnut stain to be used on pine and whitewood take 1 gallon of very thin sized shellac; add 1 pound of dry burned umber, 1 pound of dry burned sienna, and $\frac{1}{4}$ pound of lampblack. Put these articles into a jug and shake frequently until they are mixed. Apply one coat with a brush. When the work is dry, sandpaper down with fine paper, and apply one coat of shellac or cheap varnish. This will give a good imitation of solid walnut.

TOPOGRAPHICAL ENGRAVING.

A very ingenious application has been made of a French process called *topogravure*. A plate of polished zinc is coated with bitumen in the usual way, and then exposed directly to the light under an original drawing, or even under a printed plan. So soon as the light has sufficiently acted, which may be seen by means of photometric bands equally transparent at the plate, all the bitumen not acted upon is dissolved. As it is a positive which has acted as matrix, the uncovered zinc indicates the design, and the ground remains coated with insoluble bitumen. The plate is then etched with a weak solution of nitric acid in water, and the lines of the design are thus slightly engraved; the sur-

NEW AND SEASONABLE GOODS.

THE ACME STATIONERY AND PAPER CO.,

No. 117 Fulton and 52 Ann Street, New York,

MANUFACTURERS OF FINE WHITE AND MANILA WRITING PAPERS IN

COMPOSITION BOOKS.

(Copyrighted, June, 1881.)

Something entirely new and attractive for the School Trade. One of the best selling books published. They are printed on our best manila paper, bound in heavy covers with rounded corners. At the head of each page is printed a cut of some simple subject for the children to write about. The name, "*Pretty Stories*," will cause almost every child to want it. The book is recommended by the best primary teachers in the country. FIRST SERIES, 6½ × 8 inches, 24 pages, per 100 books, \$8.00. Put up in packages of 25 books each.

We have added to our *Portfolio Tablets* a line of *Fine Linen Paper*, bound in Leatherette, with stamped covers, very handsome; and also are putting up a new style of Tablet in *Fine White Writing Paper*, bound in ornamental flexible covers, with stiff back, which we call our "*TOURISTS' TABLETS*," in Commercial and Packet Note, and Congress Letter Sizes.

FINE LEATHER GOODS.

Our line for the FALL SEASON is now ready. We have an ENTIRELY NEW assortment of fine LEATHER GOODS. We call the attention of the trade particularly to the line of IMITATION IVORY cover Autograph Albums, something entirely NEW and handsome. We are also making a line of Imitation Ivory Covered Photograph Albums. Our Imitation Ivory Covers are made of CELLULOID, the only perfect, strong and durable imitation of ivory.

☞ We invite the trade to call and see our New Goods, or write for Samples, and be convinced of their NEWNESS and DESIRABILITY.

BOORUM & PEASE,

28, 30, 32 & 34 Reade Street, New York.

Trade Gossip.

All new goods and designs which are not, strictly speaking, "Novelties" will be noticed under this head. The trade are requested to forward descriptions with samples in order to secure proper notice.

James Stewart, stationer, Napanee, Ont., Can., is dead.

Isabella Bullock, dealer in notions, Louisville, Ky., has sold out.

Shilds & Co., booksellers and stationers, Atlantic, Iowa, have sold out.

Owen & Axtell, stationers and booksellers, Franklin, Pa., have sold out to E. K. Kennerdell.

The stock of A. Ballou, paper stock dealer, Boston, Mass., has been damaged by fire. Insured.

Lindsay & Liddle, wholesale and retail dealers in notions, Pittston, Pa., have dissolved partnership. R. M. Lindsay continues.

Jas. R. Crompton, Bury, Lancashire, England, manufactures a great variety of tissue papers, white, colored, grass-bleached and silver.

J. Connolly, Jr., proprietor of the *Independent*, Camillus, N. Y., has sold out to Edmund Reed, who has removed the business to Marcellus, same State.

John H. Cook, publisher of the *Register*, Wm. H. Worrell, stationer, and Mrs. E. Wise, dealer in fancy goods, Red Bank, N. J., were sufferers by fire on the 18th inst.

A. W. Faber's nine, which beat the Lippincott nine in a baseball contest at Philadelphia, were beaten at home on last Saturday afternoon on the Elysian Fields, by the William street nine, who scored 17 against Faber's 8 runs.

Among the visiting members of the trade during the week were Messrs. Lathrop, Wellslager and Smith, of Redhead, Wellslager & Co., Des Moines, Ia.; J. A. Yancey, Richmond, Va.; Charles Herzog, Memphis, Tenn., and Wm. Terry and J. E. Mason, Galveston, Tex.

A. H. Goetting is daily receiving some of the richest and most exquisite lines of fancy goods produced in French and German factories. Samples of these goods will be carried by the traveling representatives of this house, who will soon be on the road, and the trade might find it to their advantage to withhold their order till they see them.

T. Shriver & Co., copying press manufacturers, New York, are building extensive additions to their iron foundry and works. They report their business active for both home and export trade. They have had a large demand for the heavy presses used by railroad express transportation companies. An agreeable feature of their business is that the better class of goods is most in request.

J. R. Hope, representing L. Prang & Co., Philadelphia, has returned from a journey which included the cities of Baltimore, Washington, Pittsburg, &c., for the purpose of taking advance orders for their unequalled line of Christmas and New Year cards, and has met with magnificent success wherever he has been. Although preceded everywhere along the route by the representatives of importing houses handling European cards, he claims to have succeeded in taking by far the largest orders of the season in the district alluded to. Mr. Hope intends to take northwest Pennsylvania and the State of Ohio next, and doubtless the same "Good Fortune" will attend him in the West.

Potsdamer & Co., Philadelphia, invite attention to their new cards for the fall trade. Among these goods may be mentioned the following: A set of four designs of folding cards, etchings with chromo, floral designs and relief, 7 by 9½; these cards are the most elegant yet published by the firm, and are entirely novel: five designs of folding cards, with etchings and chromo floral designs on the front and back, 4½ by 6; a splendid calendar, 5¼ by 10½; something new altogether: five designs of their five etching cards, 7 by 9½; these are new and are said to be very handsome: five designs, etchings on both sides, 6¼ by 7½; these are called perfect pictures, and it is claimed that nothing more elegant has been produced on steel: five designs, etchings on both sides, 4½ by 6; all of these etchings are printed on duplex ivory board, assorted colors: five designs, etchings on both sides, 5 by 5½. In chromo advertising cards may be mentioned four designs of heraldic cards, with background in gold, designed from the middle ages; these are very brilliant in color and in very good taste, 5¼ by 3¼; four designs chromos; ladies floating on the ocean in bric-à-brac grotesque pictures, 3¼ by 5½; four designs (chromo embossed), Kate Greenaway style, 2½ by 4¼; very graceful, elegantly colored, the embossing greatly improving the appearance and makes the card more effective. In New Year's cards there are four designs, cupids, flowers and birds, a remarkable composition. The design is in one corner of the cards, richly finished; it gives room for names and mottoes; size, 2½ inches by 4½. All of these cards are of such elegant and odd designs that they must be seen to be fully appreciated. These goods will be in stock with A. M. Collins, Cope & Co., 171 William street, New York, who are the sole agents for Potsdamer & Co.

A prominent envelope manufacturing concern in this city received an order a few days ago for 25,000 envelopes printed. The work was done and the envelopes were delivered to the party giving the order, who claims that they were delivered banded only twenty-four in a bunch, instead of twenty-five, thus showing a deficiency of 1,000 envelopes, for which he makes a claim for a rebate. The manufacturer holds that 4 per cent. is not an unusual tare, and one which every printer is entitled to. If the envelopes in this case had been purchased exclusive of the printing, the full number would have been delivered. The parties to this controversy would like to have an expression of opinion from the trade upon this matter as to what is equitable.

McLoughlin Brothers have just published three new books of the "Aunt Louisa" series. One called the "Discontented Frogs" is new and original, and is printed in oil colors, with six elaborately executed illustrations. The second contains the old story of "Cock Robin;" it also has six new and rich illustrations and a new cover. The third one is a new edition of "Humpty Dumpty" with twelve illustrations. The firm has several other new publications in press which will be announced in due course.

Adams & Kimball, Chicago, offer new, cheap and useful handy interest tables, by means of which interest can be computed at the rate of ½, 1, 2, 3, 4, 5, 6, 7, 8, 9 and 10 per cent. and on any amount from one dollar to one thousand dollars and upward; and for any length of time from one day to one year and longer.

George McDowell & Co., Philadelphia, are the sole American agents for the Clothier pens. This firm also manufactures the Gaigel and Skat playing cards.

J. H. Bufford's Sons are doing remarkably well for this season of the year.

The Mead & Nixon Paper Company, Dayton, O., has sold out.

B. Knerr, publisher, Fremont, O., has sold out to James Zimmerman.

The stock of Wm. H. Hyde, dealer in fancy goods, Rockland, Me., has been attached.

Van Antwerp, Bragg & Co., Cincinnati, O., manufacture an excellent line of standard blank books.

Hover's manuscript writing paper is said to give great facility in writing, and it produces at once a black manuscript.

Loeb, Gumbel & Simon, wholesale dealers in fancy goods, New Orleans, La., have dissolved partnership. Loeb & Gumbel succeed.

Samuel C. Tatum & Co. Cincinnati, manufacture copying presses and stands of all sizes and styles, and illustrated catalogues will be furnished on application.

Charles L. Downes' improved stylographic pen or fluid pencil is said to be the only pen that is as convenient as a lead pencil and so simple that it cannot get out of order.

Byron Weston, Dalton, Mass., bears his honors proudly. He carried off the highest honors at Paris for his ledger and record papers, which are known wherever good paper is used.

The Merriam Manufacturing Company, Durham, Conn., manufactures sunk-handle cash boxes of all weights and grades; and also post-office and billhead cases, with other tin goods adapted to the best commercial stationer's trade.

W. H. Hill, Worcester, Mass., claims to be the oldest established manufacturer in the United States for the manufacture of machine made envelopes and envelope machinery. Its production is enormous, and yet the demand keeps up with it.

The L. L. Brown Paper Company, South Adams, Mass., manufactures first-class bond, pure linen, bank ledger and record papers, flat caps, folios, crown, demy, medium, royal, super-royal imperial, double demy, double medium, double royal, elephant, colombier, atlas, double elephant, antiquarian.

Grosvenor, Chater & Co., London, England, manufacture superfine hand-made writing, drawing and account book papers, machine-made writings, tub sized and engine-sized, loft-dried and machine-dried bank, note and loan printings, charts and blottings. This firm also handles Whatman, Joyanson, Hollingsworth, Turner and other noted brands.

P. P. McHugh, New York, offers a line of fine translucent goods for lithographic printing or steel plate work, and which are warranted to stand printing in ten colors. Engravers' super bristol, white and cream, and gilt, bevel-edge panels for artists' and photographers' use and other artistic novelties are also offered. Card stock by the case can be had from this firm at low rates.

The United States Circuit Court, for the Eastern District of Pennsylvania, has decreed judgment in favor of Siegfried Hammerschlag against Sylvester Garrett and Alexander Buchanan, for infringement of Hammerschlag's patent for waxing paper. Charles Biddle has been appointed master to report what damages have been sustained by the plaintiff, and to determine the amount of gain or profit the defendants have derived by infringing the plaintiff's patent. A final and perpetual injunction has been imposed upon Garrett and Buchanan, who have the right of appeal to the United States Supreme Court, but are debarred from continuing the manufacture of waxed paper, as heretofore, until they

succeed in reversing the judgment of the Circuit Court.

Max Lustig, fancy goods dealer, New Britain, Conn., has made an assignment.

The stock of Hawkins & Co., printers, Toronto, Ont., Can., is advertised to be sold at auction.

Arthur E. Kennedy has succeeded the firm of Kennedy & Stacey, newsdealers and stationers, &c., Tecumseh, Mich.

John H. Black, traveling representative of McLoughlin Brothers, is now making his regular trip and is doing a rushing business.

The Holyoke Envelope Company, Holyoke, Mass., claims to have the best gummed envelopes. The trade are requested to send for list price and samples.

Charles Beck, Philadelphia, shows an excellent line of chromo advertising cards and a rare selection of gold, silver and fancy colored papers and borders.

Clarke, Friend, Fox & Co., Chicago, will upon application, send samples and catalogues of their book, news, writing and manilla papers, of which they carry an extensive stock.

The MacKinnon Pen Company claims that its pen has greater strength, greater ink capacity, and is more convenient for the pocket than any other style now in use. It challenges comparison with any other pen after a year's use.

The Cleveland Paper Company, Cleveland, O., is prepared to furnish Japanese handkerchiefs and napkins in from twenty-five to thirty patterns and in new and elegant designs. These goods are said to be as soft and pliable as silk, and their cost is less than that of washing linen or cotton. They are especially adapted for use at public dinners, hotels, steamboats, restaurants, &c.

Koch, Sons & Co. show the largest and choicest variety of albums they have ever offered. It includes all of the latest designs in the American and European markets. Those in plush are in different shades, while those in morocco and calf are most elaborately finished. The firm also shows upwards of one hundred and fifty entirely new and original designs in photograph albums, which are elegantly embossed. Among other things shown are about seventy-five new styles of patent scrap books, patent back prescription books, new desks, backgammon and chess boards, music wrappers, &c., &c. The firm's line has been increased by several hundred entirely new designs and each is worthy of recognition. An early call from the trade is solicited.

Eberhard Faber has recently introduced a new erasing rubber called the "pointed rubber." It is in three sizes, and is meeting with much success. He has also introduced a new line of elastic pen holders, the distinguishing feature being that the nib holding the pen is a rubber tube which gives it elasticity, making it very desirable to any one requiring a springy pen. This firm has also added to its well known round gilt pencils, the "Extra" grade, which is a grade between Nos. 2 and 3. The pencils of the new grade are packed similar to the old style, and also in neat boxes, a dozen in each box. One style of the grade is made with a nickel tip having a rubber inserted. Among other recent introductions by this house is the A. W. Faber pencil sharpener, claimed to be the best in the market; each is stamped "A. W. Faber." There is also a new line of tablet pencils with bouquet, assorted in the dozen, in colors of red, white and blue, giving a very handsome appearance. The "Monitor" pencil, No. 130, is still in great demand.

Ph. Hake has his stock of new goods for the fall trade completed. He has largely increased the variety of his cards, and to that extent that he is now enabled to show twice as large a line as he did last year. Among the most attractive of his novelties in bevel edge cards is the Rainbow, which needs to be seen to be fully appreciated, as a written description of it would scarcely do it justice. He shows ten styles of visiting cards, embracing plain and bevel edge, &c. His display of menu and dinner cards is very handsome. Some are decorated with satin, others with silk fringe, and have hand-painted designs. His programme cards for this year surpass those of last year in brilliancy of design and in number. Hake's new engraved steel plate covers are designed by eminent artists, and are executed by the most skillful engravers to be found in this city. The styles of these engraved cards are in various new sizes, the designs embracing principally landscapes and figures, originally designed for the purpose. His New Year cards are just ready for inspection, and embrace thirty-five novel designs in fine cards, most of which are printed from steel plates made expressly to Mr. Hake's order. These are executed in various colors, some being embossed and ornamented with silk ribbon, fringe, silk bows, &c., and have mottoes appropriate to the season. Six of these styles are especially adapted for two callers, and several other styles for four or more callers. He also gets up a cheaper grade consisting of eight styles, lithographed in two or more colors. The latest novelty of Mr. Hake's is his satin embroidered Xmas and birthday cards. The samples are fastened on the sample cards by elastic, so that they may be taken off and sold. His novelties in the line of papeteries are equally as numerous, and are as tastefully gotten up for the fine trade as those in his general line of cards mentioned above. All of his styles have been selected after a great deal of care, and are entirely new, and have met with great success wherever shown.

Russell's blotting paper (Bulkley, Dunton & Co., 74 John street, New York, manufacturers) is one of the greatest successes in the paper line. Its consumption increases so rapidly that the manufacturers are with difficulty able to keep up their usual assortment of colors and weights. This paper is going to all parts of the country and being used for every variety of purpose to which blotting paper is applied. It is said to be equal as an absorbent to any paper in market and costs about half the price of any other really good blotting, as it is not only sold at a low price, but, being put up full weight and count, a ream of 100 pounds is said to be equal in every respect to the 120 pounds of some other makes.

The original "Gem" paper and card cutter is said to be the most simple, durable and perfect hand machine made. It was invented and is manufactured by the Howard Iron Works, Buffalo, N. Y., which firm also manufactures the celebrated "Diamond" self-clamp paper cutter and bookbinders' machinery in general.

George Waterston & Sons, London, maintain their reputation for the manufacture of sealing wax, including banker's specie, drug and express wax, prize medal sealing wax, India wax and fancy wax in all tints.

The firm of Robinson, Campbell & Co., stationers and booksellers, Atlanta, Ga., has been dissolved by the withdrawal of Mr. Cook. Robinson, Campbell & Co. succeed.

Willard & Casseday, publishers of the *Daily Herald*, Minneapolis, Minn., have sold out to the *Evening Journal*.

S. N. Lewis, paper stock dealer, Sedalia, Mo., has been burned out.

J. P. Mayberry, of Mayberry Brothers, dealers in wall paper, Cincinnati, O., is dead.

D. O. Griffin, newsdealer and stationer, Greenfield, Mass., has sold out to E. B. Beals.

G. Henry Whitcomb, Worcester, Mass., is one of the largest envelope manufacturers in the world.

Myers Brothers report trade in a very healthy state and the sale of De La Rue's cards to be increasing largely.

Among the visiting members of the trade to the city during the week were, Matt Foster, Kansas City, James J. Chapman, Washington, and W. H. Coyle, Houston, Texas.

The Chicago Rubber Stamp Works, Chicago, manufacture self-inking pocket stamps, hand-printing stamps, dating stamps, printing wheels, name stamps and every variety of rubber stamps.

Charles J. Cohen, Philadelphia, shows school stationery in great variety, including all standard goods, and the latest novelties of both European and American manufacture. A revised net cash price list, with full description of goods, will be mailed free on application.

The Improved National press is manufactured by the National Printers' Warehouse Company, New York, and is said to be a substantial and reliable job press, at low cost with throw-off adjustable grippers, two chases, roller mold, one pair rollers, two stocks and wrench. It prints full and every press is guaranteed. This house has always on hand new and secondhand printing presses, type and printing material, at low prices.

William A. Davis, manufacturer of the United States Treasury mucilage and writing inks, Boston, Mass., appears to be alive to the interest and demands of the trade. In addition to his well known and justly popular United States Treasury mucilage, he is now putting up the Diamond brand in pints and quarts in a very neat style, at special low prices; and in addition to the United States Treasury, Diamond and Stickard brands in cone sizes, he has added a new one called "Household," prepared expressly for close jobbing trade. With four brands of mucilage made in four weights of pure gum arabic, he is able to give quality and prices to suit every demand from any source. His black, colored and assorted writing inks will also bear close examination as to quality and prices. Samples and price list sent when desired.

A. Weidmann & Co. are very busy receiving their importations, which this year will exceed in variety those of any other. Among the importations are some of the best goods produced in the factories of England, France and Germany. The show room of this house now being well located and having great facilities for the exhibition of goods, more justice than formerly will be done to showing the goods which the firm handles. The assortment in toys shown by the house will, it is said, be as complete as any in the market, and will comprise many novelties, such as electric toy engines and electric toy railroads. A great many new styles of French and German dolls are also shown, and include talking, walking, eating, and drinking dolls, which are gotten up in a most elaborate and lifelike style. The assortment in masks comprises a great many novelties, several of which resemble the faces of prominent American statesmen. The firm's line of fancy trimmings for theatrical consumers has been greatly increased, and it is now busy manufacturing new articles in tin and pewter toys. Among other things

handled by the firm is an elegant assortment in glass and china ware.

Charles S. Miller, dealer in wall paper, Quincy, Ill., has made an assignment.

Harding & Gondy, stationers, Wichita, Kan., have dissolved partnership. H. J. Harding succeeds.

S. C. Stacey, publisher of the *Herald*, Tecumseh, Mich., has changed his style to Stacey Brothers.

C. Whitcomb & Co., Worcester, Mass., manufacture copying presses and invite the trade to send for catalogues.

Smith & Mayo, publishers of the *Somerset Reporter*, Skowhegan, Me., have dissolved partnership. E. P. Mayo continues.

A. M. Collins, Son & Co., Philadelphia, manufacture in great variety card and card boards for stationers, printers, lithographers, &c.

William H. Woglom, 239 Greenwich street, this city, has just brought out a modification of Van Horn's patent letter clip. This is a little smaller than his No. 2, with identically the same spring, and sold at a lower price. He has already filled quite a number of orders, both for export and the home trade.

The proprietors of the Holyoke Glazed Paper Works call attention to their waterproof lithographic papers, which are suitable for the finest description of chromo work. This house makes a specialty of a high grade of enameled and plated goods in fine tints, and invites orders for the finest grades of Bristol and card boards and for its lithographic china boards and papers.

Spalding & Hodge, London, England, keep in stock and make to order news, printing, writing, drawing, tissue and blotting papers in white cream and other colors, and in every quality. They also manufacture, either by hand or machine, loan and bank papers; and as they carry a very large stock, customers can depend on their orders having prompt despatch.

Milton Bradley & Co., Springfield, Mass., are running their large manufactory to its full capacity on their novelties for the fall trade, of which they have a large number in the works, and for which they have much earlier and larger orders than any previous season. They find a revived demand for many of their standard games as compared with their toy trade; and they have in preparation a number of fine grade novelties that are especially desirable in the stationery trade.

Boorum & Pease have issued this week their annual catalogue of blank books, autograph albums, scrap books, letter books, &c. Although they have always kept a very complete line of blank books, they have this season added quite a number of new styles. Particular attention is directed to their new celluloid autograph and photograph albums. These goods are a close imitation of ivory, at a much lower cost. They are in a large variety of styles, embracing a number of very beautiful hand-painted designs on the covers. In fine leather goods their line is very full, embracing, as it does, quite a number of novelties, which are all entirely new this season. It is quite unnecessary to give a detailed description of these goods, as the high standing of this old and prosperous house is sufficient guaranty of their quality. The firm uses only the very best of all kinds of material in its factory, and employs only the most skilled workmen. The cases containing samples of its leather goods alone take up the greater part of the ground floor of one of the buildings. Its factory covers a space of several acres.

William A. Haines, Philadelphia, one of the largest manufacturers of fine leather goods, has prepared a splendid line of attractive goods for the fall trade, which certainly deserves mention. He has ten different styles of cuff and collar boxes, making a set of two boxes. The cheapest are in leather, and the finest in Russia leather, satin lined; twelve styles of cuff and collar boxes combined, the cheapest in canvas, and the finest in Russia leather, plush, &c. Besides these there are thirteen styles of cuff and collar boxes in combination (patented), for which he says, that that there is so great a demand, that he can scarcely fill the orders. In addition to these there are boxes for brushes and combs, twenty-seven different styles, elegantly made up; seven styles of writing desks, some of which are in seal skin, beautifully finished; four styles of combined jewel, odor, gloves, handkerchief and fan boxes, in Russia leather, velvet, plush, &c., the finest article ever made; boxes for gentlemen's cravats, collars, cuffs, jewels, handkerchiefs and gloves, in Russia leather. Odor cases (twenty-two different styles), which are said to be much handsomer than imported goods of the same character; a great many styles of work boxes, in leather, Russia leather, plush, velvet, &c., with the finest imported fittings manufactured exclusively for this firm; eighteen styles of gloves and handkerchief boxes (two boxes to the set) made of all grades of leather or canvas; seven styles of desk calendars, of which this house makes a specialty; fourteen styles of portfolios, in canvas and leather. The finest being in Russia leather, with satin lining; ten styles of desk blotters; playing card boxes; music rolls in canvas and leather of different grades (thirteen styles); a very large and important line of card and letter boxes, the cheapest in sheep skin, the finest in Russia leather; cigar cases, of which this house makes a specialty, in thirty-seven different patterns, made in all kinds of leather, painted and embroidered (these goods compete successfully with similar imported goods); a large line of bill books of all sizes and prices; about one hundred styles of ladies' hand bags, in leather, satin, velvet, plush, &c., the latest and most elegant patterns; sixty-eight styles of ladies' belts in every kind of material. The assortment of portemonnaies made by this house is said to be remarkable for elegance.

Conway & Co., manufacturing chemists, Philadelphia, are prepared to furnish in any quantity a mucilage manufactured from gum arabic, that will dry quickly, stick fast, present a bright appearance, deposit no sediment, keep in perfect condition any length of time in any climate, and can be sold at a low figure, which is something that has puzzled dealers and consumers to find. Samples and prices given to dealers on application.

The Morgan Envelope Company, Springfield, Mass., claims to have the most extensive line of papeteries in the world, and manufactures envelopes and writing papers of all descriptions. It also offers this season a new line of Christmas cards in artistic designs.

John Gibson, New York, shows a complete line of day and Sunday school, Easter, birthday and advertising cards, marriage certificates, note, draft and receipt books, gum labels, &c.; also a full line of Stevens' silk woven pictures.

Charles J. Cohen, Philadelphia, has received his samples of Christmas cards in great variety, and is prepared to show the trade a full assortment at very reasonable figures.

The Plimpton Manufacturing Company, Hartford, Conn., invites attention to its extensive line of envelopes, papeteries and writing papers.

Crosscup & West, Philadelphia, execute all kinds of fine engraving.

Moss & Co., Philadelphia, are offering all of the latest novelties in fine stationery.

F. C. Ferrin & Co., dealers in notions, Providence, R. I., have dissolved partnership.

The Whiting Paper Company, Holyoke, maintains the fame and quality of its celebrated writing papers.

The J. G. Shaw Blank Book Company, New York, is offering a great variety of blank books in all of the different styles.

William Mann, Philadelphia, claims to be able to supply the trade as low as if not lower than any other house, with copying paper and books.

The Springfield City Paper Company, Springfield, Mass., makes a specialty of engine-sized, ruled and flat paper, and constantly keeps a full line of linens in stock.

Ward & Gay, Boston, offer this season new styles of autograph albums, papeteries, fine paper and envelopes, blank books, and carry a most complete line of advertising, birthday, valentine and Easter cards.

Two good things for school children are the "Little Gem Slate Cleaner" and the "Little Gem B Eraser," manufactured by the Elsey School Furniture Company, Springfield, Mass. Both are illustrated in the advertisement in another column.

G. Carlyle, Liverpool, England, manufactures fine carbonic tracing and manifold copying papers, oiled and drying papers for copying machines. He also produces largely manifold writers, manifold pens, duplicate books and agate styles, and specially prepares carbonic papers for hot climates.

The Elwood files are said to be recommended by all who use them as among the cheapest and handiest files in the market. Adams & Kimball, Chicago, report their sales increasing every week, on which fact they base their assertion that no dealer can afford to be without a line of these goods. The firm intends offering a larger selection of stationery specialties to the trade this fall than ever before. Dealers should be on the look out for the new catalogue, soon to appear.

Among the prominent houses in the fancy card trade the firm of J. H. Hamburger deserves mention. From a comparatively small business it has created for itself in a short space of time a large and increasing trade. Its publications for this year comprise over two hundred and fifty series, and it is claimed that there is no line of cards in the market equal to that shown by it. Hugo H. Plaut, one of the firm, says that he does not believe in bringing unpracticed talent into requisition by distributing prizes for originals. He thinks that the American people have their eyes wide open, and that they are competent judges. He says that his own firm employs only first-class artists, and expects to lead the market.

A. J. Holman & Co., Bible publishers, Philadelphia, have issued three editions of the revised version of the New Testament, viz., brevier, 16mo; pica, 8vo; and pica demi-8vo; all of which are reprints of the edition guaranteed by the Committee of Revision. They are bound in great variety of styles, as cloth limp, cloth boards, morocco, Turkey morocco, limp, &c. The bindings are vastly improved over the English as to style and durability. The errors which occurred in the authorized editions, have not been perpetuated in these—the proofs having been read repeatedly and carefully. The demand for these editions has been such that only

with great exertion has the house been able to fill its orders.

Lyman & Curtiss, New York, have samples of new holiday goods ready for inspection.

J. J. Evans, stationer, San Francisco, has removed to No. 436 California street, near Montgomery street.

In Gill's new art store, in Springfield, Mass., can be seen a choice line of books, stationery and fine art goods.

The Raisbeck Electrotype Company, New York, has excellent facilities for executing electrotype or stereotype work.

J. P. Dinsmore, of Carter, Dinsmore & Co., is stopping a few days at Saratoga, on his return from a business trip in the East and the Provinces.

George Elsey, of the Elsey School Furniture Company, of Springfield, Mass., has just closed a large contract for his model school desk in this vicinity. Mr. Elsey was in the city booking orders this week.

William Browne, of the Esterbrook Steel Pen Company, will be found, as usual, at his desk at 26 John street, and will not rusticate this season. There are few gentlemen more attentive to business than Mr. Browne.

E. W. Giles, of the Esterbrook Steel Pen Company, is in the city, and is about taking a much needed vacation at the seaside. His friends may expect to see him during the next two weeks at Ocean Grove, N. J. He leaves here on Saturday.

Thomas S. Dando & Co., Philadelphia, offer one of the finest selections of Christmas, New Year, birthday and French cards, photograph albums, papeteries, satin embroidery, lithographs, fans, self-supporting panel mounts and hand-painted wedding, birthday and porcelain cards.

G. J. Moffat, New Haven, Conn., manufactures all kinds of paper bags, from the smallest seed bag to the largest flour sack. He has a large line of all sizes of seed bags, tooth brush bags and photograph envelopes, cabinet size. He has just put on the market a bag for wrapping shoes in, which is said to be one of the best things ever introduced. He has a first class printing office connected with the business.

Parties who are in the carpet, furniture, dry goods, wall papers or any trade that handles shadings, will find it to their advantage to correspond with the Manila Felt Shade Company, Cleveland, Ohio, regarding prices, samples, &c., before ordering their fall stocks. The shading made by this company is said to be gaining preference over cloth goods on account of its numerous points of superiority. This firm is full of orders, but is increasing its facilities, and expects soon to meet all requirements of the trade.

The Holyoke Envelope Company began business on April 1, Jas. T. Abbe being the president, Geo. N. Tyner treasurer, and W. D. Slater superintendent. The president and treasurer, with Jas. D. Whitmore, are directors of the company. The factory has a capacity of 600,000 envelopes per day, and will produce 1,000,000 per day within three months. The company has the advantage of the most improved machinery, location and the production of everything that appertains to its business. It has also a printing office complete. It guarantees "full weights always," and offers what it calls the "best gummed goods in the market." Send for price list and samples. The New York sales-rooms are at 41 to 45 Beekman street and 166 William street.

Daniel Slote & Co., although they have always carried a very extensive line of scrap books, their standard being the Mark Twain, have this season largely increased their variety by the addition of twenty-six new styles, making altogether an assortment of sixty-five different kinds. Their adhesive wafer scrap book is entirely new, and embraces eighteen varieties. They still continue their line of art scrap books, together with their large selection of plain scraps. Taken altogether, in the line of scrap books, this firm claims to handle the largest and most complete stock to be found in this country. The embossed work on the covers is very beautifully done, the designs being executed in gold and silver leaf, and in different colors, representing landscapes, animals, flowers, birds, insects, etc., even down to Mark Twain's Calaveras frog holding before him one of his scrap books. The orders for this staple scrap book are said to be coming in at the rate of ten thousand per month. School exercise books with illuminated covers form another of their specialties, which they have gone into very largely this year, and for which they are making preparations to fill very heavy orders. These books come in twelve different varieties, and all are entirely new this season. Some have illuminated slate duck covers, and others cloth and paper covers. Included in the latter are the Japanese, trumpet and butterfly designs in various colors. They have added considerably to their general line of blank books, having brought out a number of new styles and varieties principally bound in slate colored duck.

The MacKinnon pen or fluid pencil is said to be the only reservoir pen made in the world with a circle of iridium around the point. The advantage of this construction is apparent when it is remembered that iridium is the only metal that will stand the wear of ordinary writing. Other pens wear out, but the MacKinnon, if not broken, will last a life time. This pen is made in several convenient and attractive styles, the latest of which is known as the "Sovereign." The writing portion of this pen is made precisely as in the other styles, but its greater capacity for ink and its small size—being only four inches long when closed for the pocket, and lengthening to five and one-half inches for use—render it a most convenient pen for daily work, while the longer styles are excellently adapted for the desk. The branch office lately opened at 93 Madison street, Chicago, is in charge of S. S. Scott, of long experience with stylographic pens.

Keuffel & Esser report a rapidly increased sale for their round writing pens, which are being introduced in a number of schools and business colleges. In the line of drawing materials they keep one of the most complete stocks to be found in this country, embracing every required article. The firm is building a new factory in New Jersey, and when completed will have very much larger facilities for executing its orders.

Holmes, Booth & Hayden, New York, are sole manufacturers and have the exclusive agency for McGill's well known paper fasteners and staple press.

The Buxton & Skinner Stationery Company, St. Louis, Mo., gives notice of its removal to Nos. 115 and 117 Chestnut street, where it is ready to execute all orders in its line.

The latest "craze" in the way of collections is that of "toy books." Whole libraries of these juvenile delights can be formed.

Shorb & Boland, St. Louis, offer an extensive line of blank books, papers, and general stationery goods.

Tuck's Christmas cards comprise many very charming designs. Willy Wallach has the agency.

Langfeld, Turner & Andrews, Philadelphia, are still turning out leather goods novelties of the choicest kind.

Cline, Miller & Co., Philadelphia, wholesale dealers in paper and manufacturers of envelopes, invite the orders of the trade.

The Levison & Blythe Stationery Company, St. Louis, challenges competition on its standard inks, which it claims are the best in the world.

The Dennison Manufacturing Company has a full page advertisement in this issue. It claims attention.

De La Rue's Xmas and New Year cards do not need encomiums. They are handsome enough to sell at any time.

Asa L. Shipman's Sons, New York, are manufacturing card albums for card collections, photographs, &c., in a variety of styles. The trade are invited to examine goods and prices.

George A. Lathrop, until recently with Ivison, Blakeman, Taylor & Co., this city, has been admitted to partnership in the firm of Redhead, Wellslager & Co., Des Moines, Iowa.

The Moore Combination Desk Company, Indianapolis, Ind., invites attention to its special manufactures of office desks. Correspondence is invited.

Charles J. Cohen, of Philadelphia, has returned to that city after an agreeable vacation at Sea Girt on the Jersey coast. He was accompanied by Mrs. Cohen.

The Holden Manufacturing Company, Dayton, Ohio, has a varied stock of stationery specialties, and carries a full stock of general stationery, to which the attention of the trade is asked.

The Case, Lockwood & Brainard Company, Hartford, Conn., is manufacturing one hundred and fifty different styles of pocket records and a large variety of diaries. It has just got out a new style of diary, which is called the "Inside Flexible Tuck," on which it has a patent. It also makes a specialty of the ladies' combination card case, visiting and pocket book.

Turner & Harrison, steel pen manufacturers, Philadelphia, Pa., are receiving from all parts of the United States the highest testimonials for their excellent make of pens. Their series of "Russia Moheta" pens are steadily increasing in sales, and for smoothness in writing and durability are considered superior to any imported. The trade can obtain samples on application.

Ivison, Blakeman, Taylor & Co. have placed upon the market the "Spencerian Oblique Penholder," which carries the pen in the hands of the writer at an angle approximating to the proper slant for writing and utilizes both points of the pen alike in forming letters. The margin on these oblique holders is quite large, and the trade will find it very profitable to handle them. A show card, 10 by 12 inches, printed in elegant script, old English, German text, and marking hand, with a cut of the oblique penholder, is now ready, and can be had on application.

M. L. Lemans, 116 William street, is still in the field with his general assortment of standard steel pens, and offers jobbing dealers close figures, particularly on a line of Harrison & Bradford pens, which they are about closing out at lower rates than the cost of production. The remaining stock consists of about sixty different varieties, including the favorite brands, Nos. 20, 22, 75, 505, 18, and the Acme fountain. This concern reports business as very good, taking into consideration the time of the year. From the num-

ber of inquiries it has for quotations, there seems to be a good prospect for an unusual fall trade.

John Holland, Cincinnati, offers new lines of his well known gold pens and pencils, which have so long held their position as standard goods.

Marcus Ward & Co., London and Philadelphia, are ready to meet the trade with elegant productions for the holiday season.

Carter, Rice & Co., Boston, carry a full stock of papers of all descriptions, to which the attention of buyers is invited.

The Sandford Manufacturing Company, Chicago, Ill., offers excellent lines of inks, mucilage and sealing wax.

Geo. J. Schmidt & Brother, Chicago, manufacture baskets of all descriptions. The trade are invited to send for catalogues.

John J. Daly & Co., St. Louis, offer full lines of blank blocks, and are ready to do all kinds of lithography and printing for the trade.

Crandall's toys are household articles. The manufacturers, C. M. Crandall & Co., Montrose, Pa., have just got out a new list of toys and games.

Bradner Smith & Co., Chicago, manufacture and handle in great variety ruled, ledger, news and book papers, blotting paper, envelopes and cardboard.

The Esterbrook Steel Pen Company has brought out an illustrated catalogue and price list for the use of the trade, showing cuts of all pens of its manufacture.

The "Economy" letter and bill file, manufactured by Lucien Sanderson & Co., Boston, is said to be the cheapest and simplest file in the market. It is neatly finished and sells well. The same firm will soon put on the market an entirely new and novel portable copy press, which, it is thought, will meet a long felt want, and will be as suitable for a gentleman's library as for the heaviest railroad work. It will come in standard sizes.

The excursion of the Pocketbook Makers' Association, of Philadelphia, will occur on the 27th inst. The objects of this society are praiseworthy and have met with general sympathy, as the number of tickets sold is said to be very great. The Committee of Arrangements has, therefore, been able to make large preparations and to organize a festival which promises to be the success of the season. A special train will start from Camden on the morning of the 27th, and will take the excursionists to Atlantic City, whence they will return in the evening to Philadelphia.

Clark & Edwards, 164 Clark street, Chicago, are continually adding to their line of society cards. The courteous custom of exchanging cards with one another, especially at annual gatherings, has created a great demand for the best and most artistic work the engraver and printer can produce. To satisfy this demand, they have prepared a sample book containing illustrations of their cards in beautiful colors, which should be in the hands of every stationer. They have now about 100 different designs for Knights Templars, A. and A. Rite Masons, Royal Arch Masons, Free and Accepted Masons, Odd Fellows, Knights Pythias, Order of Eastern Star, Grand Army of the Republic, Knights of Honor, Ancient Order of United Workmen, Royal Arcanum, Firemen, &c. Stationers and printers, having work to do for any of the societies requiring emblematic illustrations, are invited to send their orders to the above named firm, as it is well supplied with every facility for the production of first class work.

Brown & Sanson's new line of fine wedding papeteries for the fall trade is said to be very fine and extensive. Their line of wedding papeteries embraces about fifty new and original designs. Their visiting and New Year cards have been pronounced by those who have seen them to be among the finest in the market, the designs being entirely new and original. Their illuminated papeteries are something very unique and handsome. They have also some very pretty grotesque illustrated designs, among them silhouettes. They also show an attractive variety of children's illuminated papeteries and cabinets, known as "Under the Window" series, after Kate Greenaway. In the way of fancy boxes they show a line made of plush in two colors. Their plush card case for ladies' visiting cards is thought to be the handsomest and most taking article of its kind ever offered. The firm says that it expects a good demand for all of its goods this fall. It has somewhat enlarged its facilities for business and is now better prepared than ever to execute orders.

Samuel Hano & Co., Boston, report a wonderful increase in their sales of manifold goods. This is probably due to the superior quality of their goods and their enterprise in advertising. They use only the best materials, and notwithstanding the dullness of the season their factory is rushed with orders. To keep up with the large demand for its goods in New York, the firm has opened an office and store at No. 72 Duane street, where the trade are invited to call. The sale of patent duplicate order books is reported as very large. Circulars and price lists will be sent on application.

J. T. Dittman, Philadelphia, with a zeal which is unfading is looking assiduously after the interests of the family of A. B. Ritter, his unfortunate employee who was killed on May 29 in an accident on the Pennsylvania Railroad. Mr. Dittman has secured the promise of the Pennsylvania Railroad Company that it will grant a reasonable indemnity to the family of Mr. Ritter. The payment ought to be made speedily.

T. Shriver & Co., New York, manufacture copying presses in all sizes from the smallest to the largest in use, and all styles from the lowest priced to the most elaborately finished. This firm received the only medal awarded for copying presses at the Paris Exposition of 1878.

The trade are notified that Stafford's inks and mucilage still hold their own against any other like goods in the market, and that they are sold entirely on their merits. In making up orders for fall stocks please to bear in mind these old, standard, reliable goods.

The Williamson-Stewart Paper Company, St. Louis, carries an extensive stock of papers, blank books, envelopes and stationery goods, and invites the favors of the trade. Its advertisement will be found in this issue of THE STATIONER.

Aikin, Lambert & Co. offer their usual variety of fine gold pens and pencils with new goods which are worth examination. This firm received the highest award at the Sydney and Melbourne International exhibitions.

J. Ridgeway Moore, treasurer of the Jessup & Moore Paper Company, arrived home from Europe on Friday afternoon by the White Star steamer Celtic.

Anderson & Cameron, New York, make specialties of reward cards, Xmas and birthday cards, labels, seals, etc., and invite correspondence.

The stock, &c., of Hart & Rawlinson, booksellers and stationers, Toronto, Ont., is advertised for sale by the trustee.

The Carew Manufacturing Company, South Hadley Falls, produces an excellent line of fine writing papers.

J. H. Van Kirk & Co., New York, constantly keep on hand all kinds of paper, which they are ready to supply to the trade in any quantity.

William Irwin Martin, of Samuel Raynor & Co., was among those in attendance upon the meeting of envelope makers at Hartford yesterday.

James D. Whitmore & Co., New York, make a specialty of fashionable stationery in all of its forms. They manufacture fine leather goods also, and the trade are invited to make examination of their samples.

L. Prang & Co. are ready to take holiday orders, their new samples being open to inspection. The trade can have price lists and catalogues on applying for them. The house presents many beautiful designs in addition to its prize cards. Comment is unnecessary.

R. Fideau, 16 Beekman street, has this week filled three export orders for 1,000 cases of school slates, also for twenty-five gross of his "Unparalleled" school bags. Mr. Fideau is also very busy executing orders for all of his various kinds of hammocks and folding beds. The extremely warm weather we have had recently has developed an enormous inquiry for the latter standard goods, and although in former years the large wholesale trade began to slacken about this time, his business so far shows no signs of falling off. His trade in all of his goods is daily increasing. This can be easily accounted for, as Mr. Fideau's principle of doing business is large and quick sales, and reasonable profits or a nimble penny in preference to a slow shilling.

The Acme Stationery and Paper Company, 117 Fulton street, desires to bring to the careful notice of the trade its line of specialties, embracing fine white and manilla writing papers in pads, tablets and portfolios, school exercise books in fourteen different sizes and styles, made from white and manilla writing paper in plain and fancy ruling, bound in press board and rope paper covers, with round corners. "Pretty Stories" is the name of one of its new styles of children's composition books. At the head of each page is printed a cut of some simple subject for the children to write about. Its portfolio tablets are made of fine linen paper, bound in leatherette, with stamped covers, and are handsome. Its "Tourists' Tablets" are bound in ornamental flexible covers, with stiff back, in commercial packet note and Congress letter size.

C. B. Dickinson, of the Brooklyn Rubber Works, formerly at 349 Adams street, Brooklyn, has removed his entire machinery for manufacturing to more extensive quarters, at 660 and 662 Atlantic avenue, near the Long Island Railroad depot, Brooklyn, and his salesroom to 46 Court street, opposite the City Hall. Scarcely any well appointed stationery or fancy goods store in the country is without some of the lines of goods which Mr. Dickinson manufactures. With increased facilities, new machinery, &c., he is now able to turn out more and better goods than ever, and invites the trade to examine his catalogue and prices, and to pay a visit to his new works, which are very accessible from Fulton ferry, via the Atlantic avenue and Butler street line of cars, which go directly by the door of his factory. He is about making additions to his stock of goods in the way of novelties, &c. Among his specialties are pencil and ink erasers, Congress bands and rings, assorted bands and rings, Dickinson's improved

oblong erasers, &c. Orders for all kinds of rubber goods made to order.

F. M. Dyer, of the Pittsburg Book and News Company, has this week been hovering between New York and Boston.

Snider & Holmes, manufacturers and wholesale paper dealers, St. Louis, carry full lines of every kind of papers, and invite correspondence.

The Automatic fountain penholder is sold by the Philadelphia Novelty Company. The same house has a new thing in the shape of a "self-locking door indicator." Send for catalogue.

Obpacher Brothers, New York, now have their samples of Christmas cards ready, and ask the trade to inspect them. Their travelers are on the road, and the goods are among the finest of the season.

The Bartlett letter press, manufactured by Page, Fargo & Co., 325 Broadway, New York, is said to be the best and simplest construction of its class. It is well finished, interchangeable in all of its parts, and for shipment packs close and in very convenient form. It has only been put on the market this spring, and the trade are invited to investigate its merits.

George F. Brown, of Brown & Sanson, this city, although needing a respite from the pressure of business, is very doubtful whether he will have the opportunity of enjoying it. Mr. Brown is one of the most industrious men in the trade, and no one deserves a recreation more than he. If he should get away, it will not be for longer than a few days.

Among the visiting members of the stationery and paper trades in the city during the week were: Robert D. Patterson, of R. D. Patterson & Co., St. Louis; William Terry, of William Terry & Co., Galveston, Texas; Joseph Mason, Galveston, Texas; Manager Dyer, of the Pittsburg Book and News Company; J. W. Bond, Baltimore, Md.; A. Setliff, Nashville, Tenn.; Wm. Moser, of Moser & Lyon, Syracuse, N. Y.; James Youngs, Bridgeport, Conn.; J. J. Brigham and E. H. Stearns, Holyoke, Mass.; J. C. Heaton, of J. C. Heaton & Brother, Victoria and Cuero, Texas, and Wm. Fretwell, of Fretwell & Nichols, Savannah.

Woolworth & Graham, who have the contract for furnishing the Post Office Department with postal cards, recently received a letter from the Deputy Postmaster General of Canada, desiring to know upon what terms they could furnish the Canadian government with 10,000,000 postal cards, of size and quality corresponding with those manufactured for the United States. The letter was referred to Third Assistant Postmaster General Hazen by Woolworth & Graham, with the request that they be allowed to fill the order. To this request General Hazen has replied as follows: "I am authorized by the Postmaster General to say that he has no objection to the arrangement; provided, however, that the work shall be done under the supervision of the postal card agency, and that it shall occasion no interference with the prompt and regular fulfillment of your contract with this department. I am also instructed by the Postmaster General, in answer to yours of the 11th inst., to say that he has no objection to your complying with orders received from the government of Australia and the Argentine Republic, for postal card paper similar to that used for United States postal cards. Indeed, so far from objecting to these propositions, it affords the Postmaster General much pleasure to give his assent, not only as an act of courtesy to friendly foreign nations, but to afford encouragement to the industries of our country."

The Arms Pocketbook and Diary Company, Hartford, Conn., has a new and attractive line of goods. Its "Combination Pocket Record" contains a new and ingenious self-dating arrangement for the use of those who desire a continuous daily record, as well as for fixing dates in business memoranda, also tables and statistics, including the last census, address blanks, cash and expense accounts, bills payable, time table, etc. The self-dating combination diaries are good for any year. They differ from the pocket record in being arranged more especially for an annual diary, with days and months printed on each page. The arrangement is entirely new, having dates on the margin representing in one style a week on one page, and in another style a week on two pages. Blanks are arranged in connection with the dates, for a daily record of changes in the thermometer and weather, without occupying extra space. Each book is supplied with a renewable yearly calendar.

The Morgan Envelope Company, at its salesroom, No. 18 Murray street, this city, is making an unusual display in the line of papereries for the fall and holiday trade. The line consists of about three hundred and fifty different styles, all of which are said to be entirely new this season, and, taken as a whole, it is considered the largest and finest assortment which this company has ever brought out. The unusual facilities of this concern are well known among the trade, and little need be said upon this point. It has also on sale its standard products in envelopes, Nonotuck sermon papers and patent reservoir mucilage stands. The office and salesroom in this city is maintained for the convenience of the out of town jobbing and city trade, who have shown their appreciation of it by their liberal patronage.

"Mildred's Cadet; or, Hearts and Bell-Buttons," is a fascinating and original love story, dealing spiritedly with a summer sojourn at West Point. The style is light, breezy, and the interest is continuous from first to last. The incidents are romantic and novel. The author, Alice King Hamilton, is the wife of a United States army officer, and possesses an intimate acquaintance with everything relating to West Point life and to the famous military academy. "Mildred's Cadet" is published in a large, square duodecimo paper cover, in uniform style with Peterson's editions of Emile Zola's and Henry Greville's works, by T. B. Peterson & Brothers, Philadelphia, Pa.

The State of Wisconsin has been calling for proposals for furnishing stationery, and among the goods required are gold pens. The peculiarity of the specifications is that John Foley's gold pens are the only goods of the kind mentioned, the printed forms for proposals calling for "All John Foley's goods." Mr. Foley notified the State authorities that while he would be pleased to furnish the goods, he could not make a reduction from his regular trade price, but would only supply the pens upon the same terms as conceded to buyers of similar quantities.

R. H. Smith & Co., Springfield, Mass., have bought all of the finished stamp goods of the late firm of B. B. Hill. This firm manufactures Smith's improved pencil stamp, which makes a convenient attachment to a pencil holder. The Monitor check protector is also manufactured by R. H. Smith & Co.

Do you use or sell Noyes' dictionary holders? They are exceedingly convenient articles and sell rapidly. L. W. Noyes, Chicago, is the manufacturer.

Samuel Raynor & Co. report that they are in recent receipt of several large orders for envelopes, and that their factory is fairly engaged.

R. G. Newbegin has retired from the firm of R. G. Newbegin & Co., booksellers and stationers, St. Louis, Mo. The business will be continued under same style.

Snow, Woodman & Co., Worcester, Mass., manufacture "Alphabet Blocks," which are said to be the best in the market. The trade are invited to send for samples.

The National Blank Book Company is about to issue a new school composition book for children, with a beautifully illustrated design in several colors for the cover. The design is made up with a yachting scene in the left-hand top corner, a many colored butterfly in the right corner, and the centre is in the shape of a fan, on the leaf of which is a rural scene. This book, for the cover alone, will be very attractive to children.

The automatic shading pen, of which James D. Whitmore & Co. have the exclusive control, is one of the greatest improvements of the age for fancy writing. The firm is having a large and steady demand for them from all parts of this country as well as Europe. It has made shipments to Australia, Cuba, Italy, England and other foreign countries, with very gratifying success, and the demand is increasing. These goods are always in demand and do the finest fancy writing. J. D. Whitmore & Co. will send specimens of the work on application.

The American Crayon and Slate Company, 43 Dey street, reports that its school-slate trade is largely increasing at somewhat firmer prices. It is also experiencing an increased demand for its genuine Vermont slate pencils. The parties interested in the management of the affairs of this company understand thoroughly the wants of the trade, and buyers in purchasing their goods have the benefit of years of experience in the manufacture and design of all of its specialties. Mr. Snedeker has a very large acquaintance among the trade and has been in the school slate business, it is said, for a longer number of years than any one else in this city.

Andrew B. Coughlan, paper manufacturer, Whippany, N. J., against whose property a number of attachments have been placed in the hands of W. H. McDavitt, sheriff of Morris county, N. J., by judgment creditors, called a meeting of his creditors on Wednesday of last week, and made a proposition to pay twenty-five cents on the dollar in cash and deferred payments at six, nine and twelve months for the remainder. This proposition was not received with favor by the creditors, and nothing resulted from the meeting. It is said that possibly a few of his local creditors may agree to it, but many others will oppose it. His mill property is to be sold at sheriff's sale on September 19.

Lowell's Christmas cards are elegant specimens of engraving. Some of the designs are entirely novel and will attract a great deal of attention, finding ready sale. Other designs, while characterized by all of the delicacy and grace which distinguish John A. Lowell & Co.'s work, are conventional, and as such are only impressive for their execution. Landscapes, elegantly engraved, are always to be admired, particularly if the scene is impressive and beautiful, but they are not always suggestive of sentiment. As works of art, the specimens sent out by Lowell & Co. this year are more to be admired than many of the pretentious goods which

run riot in coloring. The portfolio, containing the four beautiful plates withdrawn from the market last spring, is now ready for the trade as Christmas goods.

Lucien Sanderson & Co., Boston, manufacture the "Government" fountain pen, which will admit of the use of any favorite gold pen, or will help stationers to work off a surplus stock of gold pens. This pen is said to be in high favor with all who have used it.

The Davidson Rubber Company, Boston, manufactures all kinds of stationers' and fine rubber goods. This company claims to make nothing but the very best, sparing no expense to this end. Its goods in the druggist sundry line are known as standard, and it proposes to establish the same reputation in its stationery goods. The velvet erasive rubber is well known, and bands and rings the company proposes to sell on their merits, which it is not expected can be exceeded. Another feature of its manufacture is rubber penholders. The velvet rubber and rings made by this company are used in the department at Washington. The company's claim is "superiority of quality rather than low prices."

At a meeting of the creditors of A. K. Loring, dealer in books, stationery, &c., Boston, held last week, the committee of investigation reported that it had received from Mr. Loring the offer of thirty-five cents on the dollar—twenty-five cents to be cash, and ten cents to be in undorsed notes running six months from July 25. The offer is conditioned upon its being accepted by all the creditors on or before the 25th inst. The committee was continued by vote of the meeting, and Mr. Everett was added to it, in order that the different classes of creditors might all be represented. Mr. Loring and the committee are to see immediately whether or not the assent of all the creditors can be procured to the compromise proposed, and, if not, proceedings will be instituted in insolvency.

Fans are shown in varied and beautiful styles for the coming season. A novelty that promises to be very popular is the circular floral fan, made of net and wire, and renovated every time it is used. A border of mountain ferns is placed around the edge, and in the centre is set a bouquet of flowers, corresponding with the garniture worn with the costume. Another popular fan is an appliqué work in silk, upon a satin or crape background, either black or white. Elegant feather fans from Vienna are shown; these of white or tinted ostrich feathers, powdered with gold or mounted with gold, pearl or amber tortoise shell, are among the handsome and high-priced styles. Lace fans are no longer mounted on silk or satin backgrounds, but on white China crape, showing off to better advantage the delicate tracery of the patterns. Lastly are the superb hand-painted fans of satin, which continually grow more beautiful and artistic.

NEW MODE OF APPLYING ELECTRICITY.

In a recent number of the German *Glashütte* a writer describes an improved method of using electric sparks in piercing and cutting glass. In the old method, one of the conducting wires was enveloped in a coating of rosin by which it was attached to the glass. A heating apparatus was also required, and when the hole had been made in the glass plate the glass had to be cleansed from the rosin. The new method is certainly much more expeditious and easy, and the apparatus required is of the simplest description. It consists of a rectangular plate or tablet of black hard gum eighteen centimetres long and twelve centimetres broad, for a battery of twelve centimetre sparks; and of a brass wire

of which the end bent around passes through the gum plate, and in it is either stuck fast or held firmly with a screw.

Now in order to perforate the glass with holes, the gum plate is laid level on the work-table or other support so that the end of the wire passing through it comes upward, while the wire itself remains below, and the latter is then brought into connection with the electrical pole of the battery. We pour a few drops of olive oil upon that part of the gum plate where the end of the brass wire is, and then lay the glass plate to be perforated upon the gum plate, carefully avoiding air bladders in the olive oil. The olive oil, apparently like every other oil, answers the purpose of insulating the wire end. We then lay the rheophore or connecting wire of the other pole over the glass, when the spark pierces the glass. Moving the glass plate slowly over the gum plate, a succession or row of holes extending along the line at which we desire to divide the glass is produced. The method is said to be useful not only in the laboratory but often in the field of industry.

The treatise by Copernicus, on the motion of the heavenly bodies, "*De Hypothesibus Motuum Cœlestium*," has been discovered at the Stockholm Observatory in shape more perfect than any other known copy. It is stitched into a copy of his "*De Revolutionibus Orbium Cœlestium*," which once belonged to the Dantzic astronomer, Hevelius.

IN addition to our extensive business in Paper in all its branches, we are doing a great deal in goods that are desirable for Stationers, Viz.: Paper Napkins and Handkerchiefs, Engraved Covers, Fine Papeteries, Orders of Dance, Menu Cards and Pencils, and in Fancy Advertising or Picture Cards. Of these we have the largest assortment in the Country. About 1,000 or 1,500 different styles and patterns. These are now all the rage, and have a large sale. We will send prices for sample sets on application, also samples of Napkins and the prices, on receipt of twenty-five cents for postage.

NOYES DICTIONARY HOLDER.

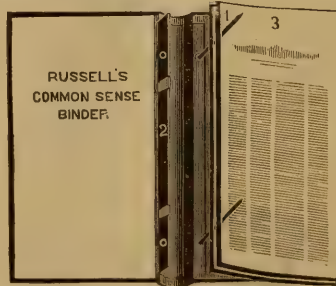

NO stock is complete without the Noyes Dictionary Holder. It is the most conspicuous object in a Book Store, meets with the readiest sale and yields the largest profit. Last Season Thousands were sold by a single dealer. Hundreds were sold by scores of dealers. Scores were sold by hundreds of dealers. Dozens were sold by thousands of dealers. Exhibit samples of the new styles and they will sell like fun. I now make a Tilting Holder that elevates the upper end of the book as it opens, and lowers it again as it closes. It handles the book as though it were alive.

Send for Prices, Pictures and Posters, to

L. W. NOYES, 99 & 101 W. Monroe St., Chicago.

Single Copies - - - 10 Cents.

NEW YORK, THURSDAY, JULY 21, 1881.

Advertisements cannot be received for insertion in the current week later than 12 M. on Wednesday. The charge for advertising is 25 cents a line, each insertion. Special terms for standing and displayed advertisements to be had on application.

This journal aims to be a medium of information for and a representative of the interests of every one connected with the stationery and fancy goods trades. It contains a full and trustworthy survey of the market for stationery in this country, in all cases giving the actual prices at which goods can be bought of importers and jobbers in this city, together with a detailed account of novelties in the trade, patents relating to stationery, and current items of interest. A review of foreign markets and accounts of movements abroad will also be furnished, and no pains will be spared to make THE STATIONER a thorough and complete exponent of the trade.

Subscription and postage for Great Britain, per annum..... 12s.

Any information our readers may wish to obtain shall be cheerfully given, and prompt replies will be made to all inquiries addressed to us on any subjects of interest to the trade.

Communications on all trade matters are earnestly solicited. Address

HOWARD LOCKWOOD, Pres. and Treas.

Subscribers to THE STATIONER can be supplied with the best cloth binder in the market. Deliverable at the publication office. Price, fifty cents.

Readers of this paper who avail themselves of the information obtained from its columns, by advertisement or otherwise, are requested to notify their correspondents of the source of their information.

THE American Paper Makers' Association will meet at Saratoga on Wednesday next.

THE paper trade should be well represented at Saratoga. There are many matters in which paper makers should be stirring.

A PAPER maker has gone from the lowest to the highest seat of the national temple. Warner Miller has been chosen as United States Senator from this State. Some people are beginning to talk wood pulp and paper at him. It is hardly necessary to say that they are connected with the newspapers.

PRESENTING the readers of THE STATIONER with a fuller number than usual, we ask them to observe that it is particularly devoted to announcements for the fall season about opening.

ALL of the envelope manufacturers invited to attend the meeting at Hartford yesterday were present or represented. We are advised that the calumet of peace was smoked, and that amicable arrangements have been made. This probably means that the envelope trade have agreed to agree, or perhaps have decided not to sell at any lower figures than are now prevailing. One of the leading members of the trade informs us that nothing was done at the meeting. As his firm was represented, he ought to know. Had an advance in prices been made, it would very probably have been proclaimed at once. The meeting was adjourned until next Wednesday, to reconvene at Saratoga. This brings the envelope men and the paper makers into conjunction.

JUSTICE to advertisers, justice to readers of this paper, demand that attention should be directed to the numerous advertisements in this issue. Many of these are new; many of them have changes which may not be noted by persons familiar with the general appearance of this paper. For these reasons it is especially necessary that the advertising columns should be carefully scanned. The stationer who is alive to his own interests, who wants to keep up with the demands of trade, and who should, indeed, try to be a little ahead of his customers and thus excite the development of taste and growth of business, will not fail to study the pages of this paper closely in all of their details. Reading advertisements is like reading treatises on law or medicine. The commercial man can thus acquire a great deal of information which he can utilize to his profit.

BUT in studying the business features of trade, there is one of importance which is also probably of first consideration. What are the prospects? From all that we see and hear; from all that is communicated to us, we gather nothing but encouragement. Prosperity abounds; the harvests are promising enough, and there is daily proof that

buyers are freely disposed. We have never had brighter prospects upon which to predicate opinion, and it would be strange if all of these indications should fail and trade go to the wall. In our correspondents' letters there is sustaining testimony of the opinion that commerce generally will be satisfactory when the summer heats have left us. But it will not do to look for too much. It is better to be disappointed favorably than unfavorably, and they who are so sanguine as to expect or even hope that trade will assume abnormally large proportions will probably realize the futility of their desire. The wants of the people are extending; they will doubtless be greater this fall than last. But buyers are not likely to be carried away by excitement, and will be inclined to distrust the influences which create it. Let trade pursue its course steadily. We believe that its results will be quite satisfactory—except to those who never have enough and who would complain under any and every favoring circumstance.

ANSWERS TO CORRESPONDENTS.

J. J. M. wants names of manufacturers of tin foil paper.

Ans.—Walter & Co., 65 Duane street, and L. De Jonge, 71 Duane street, New York.

C. S. C. asks: Who makes iron safes and other toys of iron?

Ans.—J. & E. Stevens & Co., Cromwell, Conn.; H. L. Judd & Co., 87 Chambers street, New York.

W. R. P. wants the address of any member of the Bunce Paper Company, which formerly ran a mill at Jersey City.

Ans.—We have inquired, but cannot find out. Perhaps some reader of THE STATIONER can supply the desired information.

M. wants names of large manufacturers and dealers in paper bags.

Ans.—Hollingsworth & Whitney, Boston and New York; G. J. Moffatt, New Haven, Conn.; Chatfield & Woods, Cincinnati; Union Bag and Paper Company, Chicago; Thomas Nixon, Dayton, O.; Arkells & Smith, Canajoharie, N. Y.; Edwin J. Howlett & Co., Philadelphia.

The Traveling Cad.

PHILADELPHIA, Pa., July 19, 1881.

To the Editor of *The Stationer*:

I regret it is necessary to call your attention to an evil that is a serious annoyance and positive loss to many traveling salesmen like myself, through the utter caddishness of some members of the profession. All right-minded travelers will scorn to do such a thing; yet there are a number, and no small number either, who will take the liberty of looking over a fellow-traveler's samples and note the prices thereon when they enter and find him engaged with a customer. They will hang about and listen to everything that is said, pretending to have no particular interest in the matter, while all the time acting as spies, their object being to find out something that will enable them to cut out a competitor. No terms are too strong with which to denounce such meanness and treachery. Occasionally the proprietor of the store knows the man has no right to be present, but lacks the courage to resent or prevent the impertinence. Of course, to use a hackneyed phrase, "No gentleman will do such a thing;" but I am sorry to say I have found too many traveling agents err on this point, as if they had not the slightest idea they were doing anything objectionable. This must proceed from "the crassest kind of ignorance and the utter destitution of good manners," as Thomas Carlyle would have said.

One case in point (I could give many more): A person of this description entered a large store in Washington, while I was engaged in showing samples to the proprietor. He laid down his own case, came over to where we were engaged, pretty far back, and began looking over mine while I was showing goods to my customer. As he was interrupting us, I suggested he should call again as we would be engaged some time. He coolly replied he was in no hurry, could wait, and wanted to see pretty things as well as anybody else. The interview was brought to a close, through the fellow's persistence in remaining, much sooner than was consistent with my customer's interests and mine. I found out afterward what I suspected then, that he was in the same line exactly as myself. Such a fellow deserves to be kicked out.

One word more. If commercial travelers expect to be respected, they must behave in a respectable way to each other. "Dog does not eat dog." Let us, therefore, learn a lesson in morality and good feeling from one of the lower animals. Let all honorable salesmen avoid this vile-mannered practice, and resist it wherever and whenever it shows itself, and people will then cease to speak of us contemptuously as "drummers"—but we deserve the contempt of outsiders until such things are frowned down and put a stop to. VIATOR.

"MAGIC INK."—A solution of nitrate or chloride of cobalt, or chloride of copper, mixed with a little gum or sugar, produces a "magic ink," which is made visible by warming, either by holding against the stove or over a burning match. Potassium ferrocyanide in solution may also be used; but this requires a developer, for which either copper or iron sulphate may be employed. With the former the writing will appear in brown, and with the latter in blue color.

TO RENDER WOOD AND TISSUES UN-INFLAMMABLE.

The *Société d'Encouragement pour l'Industrie* had invited answers to the question, how to render woodwork and tissues unflammable. Jean Abel Martin proposed the following mixtures, which have been accepted by the society:

For light tissues—Pure sulphate of ammonia, 8 parts; pure carbonate of ammonia, 2.5; boric acid, 3; pure borax, 3; starch, 2; (or gelatine, 4), or dextrine, 4; water, 100.

For use, steep the tissue in the solution, at a temperature of 30° Reaumur, and saturate it thoroughly; dry it in the ordinary manner, as is done with starched articles prior to ironing them. The quantity of starch, dextrine, or gelatine may vary in accordance with the stiffness desired to be imparted to the article. The price amounts to very little—about fifteen centimes per litre, which is enough for about fifteen metres of tissue.

2. Mixture applicable to decorations already painted, to canvas already mounted, to wood, furniture, window casings, &c. It is applied at a temperature of 55° or 60° R., with a brush, like ordinary paint: chlorhydrate of ammonia, 15 parts; boric acid, 5; skin glue, 50; gelatine, 1; water, 100; lime to give it the requisite consistency.

For canvas already painted, it suffices to give a coating on the back of the painting, and to treat the frames to a like application.

3. Mixture for coarse cloths, cordages, or straw mattings, as well as wood. It is to be applied at a temperature of 100°, and the immersion must last fifteen or twenty minutes; wring lightly and let dry; chlorhydrate of ammonia, 15 parts; boric acid, 6; borax, 3; water, 100.

4. Mixture for paper, painted or not. This solution is used at a temperature of 50°: Sulphate of ammonia, 3 parts; boric acid, 3; borax, 2; water, 100.

A beautiful golden-yellow dye is now prepared from the young wood of various poplars. The young branches and shoots are cut off, crushed and brayed, then boiled in alum water in the proportions of ten pounds of wood and one pound of powdered alum to three gallons of water. The liquor is boiled from twenty minutes to half an hour, and then filtered. In cooling, it thickens and clears, throwing down a greenish-yellow deposit of resinous matter. When sufficiently clear, the liquid is again filtered and then left exposed to the air for three or more days, according to the weather and the atmosphere. It quickly oxidizes under the action of the light and air, and assumes a rich golden tint, and in this state can be used for dyeing fabrics of all descriptions. For yellow and orange-yellow shades, it is used alone; mixed with Prussian blue, it gives green; with oak bark, brown and tan, with cochineal, &c., orange and scarlet shades. The coloring thus produced is said to be of superior quality.

Wild cherry is a wood for which a large demand has sprung up in the United States. In supplying the place of walnut, cherry is a very valuable wood, and good care should be taken of the growing trees. It is used very extensively in making ebonized furniture. It has a very close grain, takes the best stain, and is capable of high polish. Besides its use in furniture, cherry is used largely in the internal fittings of cars and public buildings. The tree is common in Michigan and other timbered States, and is exported from the United States. The timber is probably as enduring as walnut.—*Lumberman's Gazette*.

Market Review.

OFFICE OF THE AMERICAN STATIONER,
WEDNESDAY, July 20, 1881.

THE MONEY MARKET. The money market is working easy under an increase of loanable funds indicated by the increase in our local bank reserves. Prime mercantile paper is scarce and wanted at the low rates of 3@5 per cent, and call loans range from 2 to 4 per cent. The depression of the stock market continues, with little prospect of a strong and well sustained rally while the war of rates between the great trunk line railways continues. Prices are quite generally lower than they were, but it is a significant fact that each decline has brought out strong buyers. Railway bonds are irregular, but have a better support than the shares. Governments are firm and fractionally higher. The market for foreign exchange was weak but dull. The posted rates of prime bankers' sterling are down to \$1.84 and \$1.85; the actual rates are \$1.83½@1.83¾ and \$1.85½@1.85¾. Cable transfers are \$1.85½@1.86¼, and prime commercial bills \$1.83½@1.82¼. The actual rates for Continental exchange are as follows: France, 5.22½ and 5 10/16@5.18¾; marks, 9¼ and 9½; and guilders 40 and 40½.

THE PAPER MARKET.—Business keeps along in the same moderate movement which we have noted for some weeks past. Although the jobbing trade report a light business in progress, yet we are quite generally informed that, taking the month of June through, the aggregate showed a more favorable exhibit than for the same month last year. There are some manufacturers seeking business who are willing to take orders, to give them employment throughout the summer months, at figures somewhat under the current quoted rates. The greater number of mills are believed to still have a fair amount of business in hand, with a good prospect of continuance for some weeks to come. We hear of one large manufacturer who visited the city this week not particularly to solicit orders, but who received one of 350 tons, thus giving one of his mills steady employment on this one order for nearly three months. We mention this instance to show that there are large orders in the market and that they are being given out, and that manufacturers have some reason to feel encouraged. Although all of the Eastern straw-wrapping mills have been nominally closed since the first of this month, it is reported that two large manufacturers withdrew from the combination a few days before the shutting down commenced, and have been running continuously, so it is said, up to the present time. There is some cutting in prices indulged in by the dealers and manufacturers of light weights, because of the accumulation in the market, but heavy weights are, if anything, scarce, and prices are fairly sustained. Some complaint is expressed at the low condition of some of the streams.

THE STATIONERY MARKET.—There is a more pleasing expression to be seen this week on the countenances of most of our dealers in stationery and fancy goods than we have been accustomed to observe since the holiday season. Buyers are beginning to come in from the South, West and Northwest in fair numbers, and very soon salesmen, as well as porters, bookkeepers and junior partners, will be compelled to work until the small hours of the morning. Trade with country dealers is said to be changing yearly, in respect to the manner of ordering goods. We were informed by a large blank book concern that only a few years before the extension of transportation facilities, it used to be a common occurrence for a number of very heavy buyers to come in and each give large orders on the same day, and all wanting their goods immediately. In this way the concern referred to was compelled to lose orders because it did not have the stock to fill them. It is a very common thing now for some of these same out of town houses to send on an order every week, and occasionally every day or so, and only to order a comparatively moderate quantity at any one time. We hope to be able to report a still greater improvement in business in another week. There can be no doubt that every indication at present points to a larger business being done by the trade this season than in any previous year. That the better class of goods are sought for this year affords one of the best proofs of prosperity throughout the country. We hear of no changes having been made in staple goods, but the probabilities are that the result of the meeting at Hartford to-day will be an advance in the prices of envelopes.

PHOSPHORESCENT SUBSTANCES.

Phosphorescence, or the emission of light without flame or sensible elevation of temperature, is a phenomenon exhibited in a greater or lesser degree by many substances—mineral, animal, and vegetable—and is developed under a variety of conditions. In a few substances the light is developed by chemical change or a process of slow combustion, as in the case of phosphorus, from which the name phosphorescence has been derived. In others the substance suffers no appreciable change, only requiring exposure to a strong light to shine themselves when taken into the dark. The diamond and many mineral substances develop light in this way, and it is supposed that these substances have the property of absorbing light in the same way they do heat, and of slowly parting with it when taken into the dark much in the same way that hot bodies part with their heat when removed from the source of heat.

With some of these substances the application of heat causes the development of a brighter light (though for a shorter time than would be otherwise required to exhaust the supply); and again, there are substances, such as fluorspar, that absorb light, but do not give it out until heated.

Many substances also become phosphorescent while crystallizing.

The color of the light developed by many of these substances varies with the nature and the degrees of heat to which they have been exposed. A certain scale of light and color may, therefore, be produced by grouping together different substances or samples of the same substances previously heated at different temperatures.

The following are methods for preparing some of these pyrophors:

BARIUM SULPHIDE.

Finely powdered barium sulphate, free from iron, is formed into balls with gum tragacanth; the balls are dried at a moderate temperature, then placed in a crucible with a luted cover and kept at a red heat for an hour. They are then allowed to cool slowly, and while still warm are transferred to glass stoppered bottles.

A better light is developed from the following charge:

Barium sulphate (C. P.).....	parts. 32
Magnesium carbonate (C. P.).....	1
Sulphur (C. P.).....	1
Gum tragacanth.....	q. s.

This is heated in the crucible as before described.

STRONTIUM SULPHIDE.

Strontium sulphate (C. P.).....	parts. 22
Sulphur (C. P.).....	1
Gum tragacanth.....	q. s.

Proceed as before.

CALCIUM SULPHIDE—(CANTON'S PHOSPHORUS).

Calcine clean oyster shells to whiteness in a crucible, separate the clearer portions, reduce these to a fine powder, and place in layers with intermediate layers of flowers of sulphur in a crucible, cover and heat to dull redness for about half an hour. Cover the crucible tightly and let it cool slowly in the crucible.

Another method of preparing this phosphorescent sulphide is to heat bisulphide of lime—obtained by boiling lime in a little water with twice its weight of sulphur—in a covered crucible at a low, red heat for one hour.

CALCIUM AND ANTIMONY SULPHIDES.

Calcined oyster shells.....	parts. 3
Flowers of sulphur.....	10
Antimonic acid.....	1

Mix intimately, in fine powder, and heat for

half an hour in a covered crucible at low redness.

CHLORIDE OF CALCIUM.

Fuse chloride of calcium in a crucible and pour it out on a clean iron plate. As soon as it becomes cold enough break it into pieces and transfer to well stoppered bottles.

CALCIUM NITRATE.

Dissolve chalk or marble dust in nitric acid, evaporate to dryness, and fuse in a porcelain crucible.

These substances, when properly prepared and exposed to any strong light for a short time, exhibit phosphorescence for some time after removing to a dark place. A calcium sulphide has been prepared that, after a short exposure to sunlight, will continue to give out light for ten hours in the dark. When, by keeping in the dark, one of these substances has ceased to give out light, it may be made to give a series of fresh exhibitions by heating it first with the hand, then over a water bath, and finally on a hot stone plate.

A remarkable phosphorescence is developed in quinia and some of its salts by heat. Spread quinia or its sulphate on a sheet of paper, and spread the paper on a plate of hot metal in a dark room—a strong phosphorescent light develops at the edges and spreads to the centre. A similar display is observed in sprinkling finely powdered fluorspar (calcium fluoride) over a plate of hot metal in the dark.

Boracic acid fused and allowed to cool breaks into small pieces, and along the cracks a phosphorescent light appears, which is sometimes strong enough to be visible even in daylight. Potassium sulphate fused with cream of tartar shows the same phenomenon.

PHOSPHORUS.

Phosphureted oil is the best means of exhibiting the luminous properties of phosphorus. A small piece of dry phosphorus, about the size of a pea, is placed in a test tube with a little pure olive oil. The test tube is held in the water bath until the oil becomes heated and the phosphorus liquefies; it is then shaken until the oil will take up no more phosphorus, and, after allowing the oil to become clear, it is poured off into a small glass vial provided with a glass stopper. Only a small quantity of this oil in the bottom of the vial is necessary. When it is shaken about so as to coat the sides of the vessel, and the stopper is removed so as to let the air get in, the oil-coated sides of the glass become at once luminous, and continue so as long as the stopper remains out. Characters written on paper with oil thus prepared (freshly), appear in the dark very brightly.

Phosphureted ether is prepared by digesting phosphorus in ether for some days in a tightly stoppered bottle. A piece of sugar dipped into this ethereal solution and then thrown into water makes the surface of the latter appear quite luminous in the dark.

Young experimenters must remember that phosphorus is very dangerous to handle when out of water, and often inflames spontaneously when exposed dry in the air.

The great cavern which was discovered last year in Colorado has been thoroughly explored. Forty rooms are accessible, and many of them contain a profusion of stalactitic formations, in some cases translucent, and in others varying in color from red to pure white. Shining crystals, tufts of satiny fibre, slender arms resembling growths of coral, rams' horns twisted in every conceivable way, pillars, pendants, statuettes, and grotesque shapes of life are among the curiosities of these walls.

SCHOOL BAGS.

"UNPARALLELED," and "O. W. BUSYBODY."

They are the best and cheapest in the market. Made in uniform shape by pressure, or flexible without pressure, as the buyers desire them. Warranted without starch.

An allowance of 10 per cent. cheaper than heretofore.

Also, I offer the trade all kinds of SLATE goods at low prices.

and Copying Ink.

THIS Ink combines the qualities of a Writing and Copying Ink in a manner unsurpassed by any other make in the market. As a Copying Ink it will make a distinct copy even several days after, and if required two clear copies can be taken. As a Writing Ink it excels for its intense blackness. It never fades, nor does it blur. It is used in all Government Offices on the Continent of Europe.
We are enabled to quote this Ink far below the prices of other Copying Inks.

628 Chestnut Street, Philadelphia.

A. S. Spence & Co., 537 Market Street,
San Francisco.

BE CAREFUL THAT THE NAME OF THE INVENTOR, D. MacKINNON, IS STAMPED ON THE PEN, AS THERE ARE CHEAP IMITATIONS POINTED WITH A SOFT METAL WHICH WEARS AWAY AFTER A FEW WEEKS' USE.

EXACT SIZE OF NEW "SOVEREIGN" PEN CLOSED FOR THE POCKET.

The new "Sovereign" is the most popular Pen made, having greater strength, greater ink capacity, and is more convenient for the pocket, than any now in use. The Manufacturers guarantee to keep every "MacKinnon" in good working order for three years, and if the point shows any sign of wear in that time to repoint it free of charge. Each Pen in handsome Morocco Case, with filler and directions complete.

MARCUS WARD & CO.

Invite the attention of the trade to their new

Christmas and New Year Cards and Calendars for 1881-82,

—WHICH ARE NOW READY,—

And Sample Books are in the hands of their Travelers, who will have pleasure in booking orders.

IN design, variety, and appropriateness, they greatly excel those of former seasons, for Marcus Ward & Co. have long recognized the fact that intrinsic merit alone can insure the increase and permanent success of high-class productions. To this end artists of acknowledged talent and mechanical skill of the highest order only are employed. An inspection of samples will convince the trade that, in the production of these beautiful souvenirs, they continue to be the leaders.

Orders should be placed early to insure timely delivery. All communications should be addressed

**BRAZING AND SOLDERING.**

The term soldering is generally applied when fusible alloys of lead and tin are employed for uniting metals. When hard metals, such as copper, brass, or silver are used, the term brazing (derived from brass) is more appropriate.

In uniting tin, copper, brass, &c., with any of the soft solders, a copper soldering iron is generally used. This tool and the manner of using it are too well known to need description. In many cases, however, the work may be done more neatly without the soldering-iron, by filing or turning the joints so that they fit closely, moistening them with the soldering fluid described hereafter, placing a piece of smooth tin-foil between them, tying them together with binding wire, and heating the whole in a lamp or fire till the tin-foil melts. We have often joined pieces of brass in this way so that the joints were quite invisible. Indeed, with good soft solder almost all work may be done over a spirit-lamp, or even a candle, without the use of a soldering-iron.

Advantage may be taken of the varying degrees of fusibility of solders to make several joints in the same piece of work. Thus, if the first joint has been made with fine tinner's solder, there will be no danger of melting it in making a joint near it with bismuth solder, composed of lead 4, tin 4, and bismuth 1, and the melting point of both is far enough removed from that of a solder composed of lead 2, tin 1, and bismuth 2, to be in no danger of fusion during the use of the latter.

Soft solders do not make malleable joints. To join brass, copper, or iron, so as to have the joint very strong and malleable, hard solder must be used. For this purpose, equal parts of silver and brass will be found excellent, though for iron, copper, or very infusible brass, nothing is better than silver coin rolled out thin, which may be done by any silversmith or dentist. This makes decidedly the toughest of all joints, and as a little silver goes a long way, it is not very expensive.

For most hard solders borax is the best flux. It dissolves any oxides which may exist on the surface of the metal, and protects the latter from the further action of the air, so that the solder is enabled to come into actual contact with the surfaces which are to be joined. For soft solders the best flux is a soldering fluid which may be prepared by saturating hydrochloric acid (spirit of salt) with zinc. The addition of a little sal-ammoniac improves it. It is said that a solution of phosphoric acid in alcohol makes an excellent soldering fluid, which has some advantages over chloride of zinc.

In using ordinary tinner's solder for uniting surfaces that are already tinned—such as tinned plate and tinned copper—rosin is the best and cheapest flux; but when surfaces of iron, brass or copper that have not been tinned are to be joined by soft solder, the soldering fluid is by far the most convenient. Rosin possesses this important advantage over soldering fluid, that it does not induce subsequent corrosion of the article to which it is applied. When acid fluxes have been applied to anything that is liable to rust, it is necessary to see that they are thoroughly washed off with clean, warm water, and the articles carefully and thoroughly dried.

Oil and powdered resin mixed together make a good flux for tinned articles. The mixture can be applied with a small brush or a swab tied to the end of a stick.

In preparing solders, whether hard or soft, great care is requisite to avoid two faults—a want of uniformity in the melted mass, and a

change in the proportions of the constituents by the loss of volatile or oxidable ingredients. Thus, where copper, silver and similar metals are to be mixed with tin, zinc, etc., it is necessary to melt the more infusible metal first. When copper and zinc are heated together a large portion of the zinc passes off in fumes. In preparing soft solders the material should be melted under tallow, to prevent waste by oxidation; and in melting hard solders the same object is accomplished by covering them with a thick layer of powdered charcoal.

To obtain hard solders of uniform composition they are generally granulated by pouring them into water through a wet broom. Sometimes they are cast in solid masses and reduced to powder by filing. Silver solders for jewelers are generally rolled into thin plates, and sometimes the soft solders, especially those that are very fusible, are rolled into sheets and cut into narrow strips, which are very convenient for small work that is to be heated by a lamp.

The following simple mode of making solder wire, which is very handy for small work, will be found useful: Take a sheet of stiff writing or drawing paper and roll it in a conical form, rather broad in comparison with its length; make a ring of stiff wire, to hold it in, attaching a suitable handle to the ring. The point of the cone may first of all be cut off, to leave an orifice of the size required. When filled with molten solder it should be held above a pail of cold water, and the stream of solder flowing from the cone will congeal as it runs and form the wire. If held a little higher, so that the stream of solder breaks into drops before striking the water, it will form handy, elongated "tears" of metal; but, by holding it still higher, each drop forms a thin, concave cup or shell. As each of these forms have their own peculiar uses in business, many a mechanic will find this hint very useful.

Hard solders are usually reduced to powder either by granulation or filing, and then spread along the joints after being mixed with borax which has been fused and powdered. It is not necessary that the grains of solder should be placed between the pieces to be joined, as with the aid of the borax they will "sweat" into the joint as soon as fusion takes place. The same is true of soft solder applied with a soldering fluid. One of the essential requisites of success, however, is that the surfaces be clean, bright and free from all rust.

The best solder for platinum is fine gold. The joint is not only very infusible, but it is not easily acted upon by common agents. For German silver joints (concludes the *Workshop Companion*) an excellent solder is composed of equal parts of silver, brass and zinc. The proper flux is borax.

Sponges are quite hard and gritty when first bought, but can be easily softened and made fit for use by first soaking in clear water, then squeezing them through several basins of cold water. Then put the sponge into a clean tin saucepan, cover with water, and boil fifteen minutes. Then plunge it into a bowl of cold water and squeeze well. Rinse the saucepan clean from all the sand that will have been dislodged from the crevices, return the sponge to it, fill up with clear, cold water again, and boil another fifteen minutes. Rinse and repeat the process three times or more, if the sponge still continues at all gritty. It must not boil more than fifteen minutes before being rinsed in cold water, or it will become tender and come to pieces. By this treatment all the sea sand will be removed and the sponge become very soft.

"THE GREAT ROCK ISLAND ROUTE"

Calls your attention to the following REASONS WHY, if about to make a Journey to the GREAT WEST, you should travel over it:

As nearly absolute safety as is possible to be attained. : close connections in UNION DEPOTS, at all important points. No change of cars between CHICAGO, KANSAS CITY, LEAVENWORTH, ATCHISON or COUNCIL BLUFFS. Quick journeys because carried on Fast Express Trains. Day cars that are not only artistically decorated, but furnished with seats that admit of ease and comfort. Sleeping cars that permit quiet rest in home-like beds. Dining cars that are used only for eating purposes, and in which the best of meals are served for the reasonable sum of seventy-five cents each. A journey that furnishes the finest views of the fertile farms and pretty cities of Illinois, Iowa and Missouri, and is afterwards remembered as one of the pleasant incidents of life. You arrive at destination rested, not weary; clean, not dirty; calm, not angry. In brief, you get the maximum of comfort at a minimum of cost.

That the unremitting care of the Chicago, Rock Island & Pacific Railway for the comfort of its patrons is appreciated, is attested by its constantly increasing business, and the fact that it is the favorite route with delegates and visitors to the great assemblages, political, religious, educational and benevolent, that assemble from time to time in the great cities of the United States, as well as tourists who seek the pleasant lines of travel while en route to behold the wonderful scenes of Colorado, the Yellowstone and Yosemite. To accommodate those who desire to visit Colorado for health, pleasure or business, in the most auspicious time of the year, the Summer season and months of September and October, the Company every year puts on sale, May 1st, at all coupon ticket offices in the United States and Canada, round trip tickets to

DENVER, COLORADO SPRINGS AND PUEBLO.

At reduced rates, good returning, until October 31st. Also to San Francisco, for parties of ten or more, good for ninety days, at great reduction from regular fares.

REMEMBER, this is the most direct route for all points WEST and SOUTHWEST. For further information, time-tables, maps or folders, call upon or address

R. R. CABLE,
Vice-President and Gen'l Man'gr, Chicago.

E. ST. JOHN,

KINGSLEY'S PAPIO-FLORA,

A Novel, Elegant, Brilliant, Clean, Cheap and Durable Substitute for Evergreen Festoons, and
Cambric Funeral Drapings.

FLORAL GARLANDS MADE OF PAPER, IN ALL THE COLORS OF THE RAINBOW.

Warranted to Stand Rain or Sun Better than Drapery or Evergreens.

ELEGANT DESIGNS, MONOGRAMS AND MOTTOES MADE TO ORDER. SAMPLES SENT ON APPLICATION.

After an experience of several years in Decorating and Draping Churches, Halls, etc., I have succeeded in producing an article which has been pronounced "the most elegant and effective article at the lowest price that has ever been offered for the purpose."

Combining as it does, Brilliancy, Lightness, Durability and Cleanliness with Cheapness, and the ease with which Devices, Monograms and Letters can be made, it offers an elegant and cheap substitute for Natural Flowers; a very effective article to take the place of Evergreens; a much more Brilliant Decoration than Cloth or Bunting.

It can be made of any Color, Shade or Tint, thereby allowing Combinations before unknown on account of the great expense attending the manufacture of such large Devices as are sometimes required.

With these Garlands they can be made at trifling expense, and by anybody.

These Garlands are made of Prepared Paper so arranged upon wire as to form Ruchings or Cables, round or flat, as desired, and of any size from 1 inch to 6 inches in diameter. One hundred yards weigh only 10 pounds.

The success of these Garlands is established by the fact that they have been used in preference to other material.

THE MYSTERIES OF METALS.

Notwithstanding the wonderful progress that has been made during the last half century in regard to the constitution and working of the useful metals, there is yet a vast deal to be learned. The metals when pure are commonly supposed to be simple elements, yet there are some reasons for supposing that it may yet be proven that at least some of them are compounds. Even the great Faraday gave utterance to the thought that the dreams of the alchemists might yet be realized—that gold and other metals might be found to be compounds and that means might be devised whereby those compounds might be separated, and afterwards so differently re-united that the baser metals might be converted into precious.

The changes which are wrought in iron and steel by converting, annealing and hardening processes, are far from being understood by the most advanced metallurgists of the present day. The mysteries of hydrogen gas and its intimate relations with iron are as much a puzzle as they were fifty years ago, and the theory advanced by Graham that hydrogen itself is a metal is still maintained by many chemists.

It is only a few years since that absolutely pure iron became known to scientists; and it is now shown to be a metal almost as "unstable as water," and still found only in the laboratory as a great curiosity. What had previously been known as pure iron, was shown by Jacobi to be a compound of iron and hydrogen. He first separated the two so called elements. During the process the iron, increased in volume, changed from a dark to a silver white substance, very ductile and so soft as to be nearly as readily cut as lead. This experiment proved that hydrogen played an important part in hardening and tempering steel—as much so as carbon,—but how or why none know to this day.

It is said that much more difficulty is found in rolling, and otherwise manipulating, gold in a factory where much electricity is generated by the action of machinery than in a room where no machinery is in operation, and where, consequently, frictional electricity is absent. The trouble is manifested in a disposition of the edges of the plates or thin bars to crack.

Many other peculiarities, already known, might be mentioned, and there is no doubt that closer observation will still largely increase the number of curious and as yet inexplicable phenomena connected with the working and general characteristics of the metals, both useful and precious.

HOW TO TELL GOOD FROM BAD GILDING.

You may find out whether gilding is genuine or not by the fact that, on the latter a weak solution of protochloride of copper produces a black precipitate, which it does not on the former. In the case of gilt paper, the simplest method consists in slowly burning the paper in a bright flame that gives out no smoke; in the incinerated remains of good gilt paper there are traces of the gold left behind, which are quite perceptible to the naked eye, in the shape of glittering spots, while vile metal on paper oxidises in burning, and leaves nothing but a sort of red spots behind. This method, however, is scarcely accurate enough; a very much safer test is to be found in the use of mercury, either in metallic shape or in solution of salts of mercury. The former test is performed by putting a few drops of pure quicksilver on the gilt article, and either rubbing it in or slightly heating it. If the gilding be genuine, though ever so thin, the

mercury combines itself with it, producing white spots on the surface. This does not occur in the case of sham-gilding, and in rubbing mercury in, no change of color whatever is to be noticed. Another test consists in the application of a watery solution of nitrate of mercury. In this case the exact opposite takes place as in the former, for genuine gilding remains intact, while a "duffer" at once takes a white color when brought in contact with the precipitate of mercury.

GEM PUZZLE IN ANCIENT INDIA.

A correspondent of the *Boston Transcript* forwards to that paper the following communication, published in the *Madras Mail*, from an officer of the Indian civil service:

To the Editor of the *Madras Mail*:

SIR—As the great American thirty-four puzzle is one which has occupied a good deal of attention of late in social circles, it may interest some of your readers to know that, four centuries ago, the peculiar property of the first sixteen figures, arranged in a square, was known to the Hindus, who carved it thus on an old temple in the Hill Fort of Gwalia:

16	9	4	5
3	6	15	10
13	12	1	8
2	7	14	11

The inscription is dated A. D. 1483. The temple is situated on the north side of the hill, and was once a very magnificent edifice. See "Journal of the Asiatic Society of Bengal," vol. xi., page 292. R. S.

Thus doth history repeat itself. Perhaps the soul of the American who devised the Gem Puzzle once pervaded the body of the Hindu who carved the symbols on the temple mentioned.

ACTION OF LIGHT ON METALS.—The remarkable property possessed by the metal selenium, of increasing its electrical conductivity as soon as it is submitted to the action of light, has given rise to several very ingenious inventions besides the photophone contrived by Professor Bell. One investigator has already been partially successful in transmitting drawings by telegraph, owing to an ingenious application of the principle; another has contrived an apparatus for regulating the intensity of the heat in furnaces used for baking stained glass; and a well known scientist, Professor Minchin, has discovered that other metals besides selenium may be made to possess this peculiar property. For instance, a galvanic cell made by immersing plates of tin-foil in acid carbonate of lime is exceedingly sensitive to light, and gives off far more electricity when exposed to daylight than when kept in the dark.

The director of public instruction, British Burmah, has offered prizes of from 200 to 300 rupees each for a history of Burmah in Burmese, vernacular readers, a Burmese grammar and geography, and a Burmese translation of the first three books and the sixth book of Euclid.

It is very well to talk poetically about the slender threads of fate, but the ugly truth is that a man's fate generally depends upon the number of hours of honest work he puts into every day.

— MANUFACTURERS OF —

BLANK BOOKS,

HAVE NOW READY

"THE PERFECTION" DUPLICATE COPYING TABLET.

This will be found a very useful combination of writing sheets and copying pad, by the use of which a perfect copy of either letter or order can be instantly obtained and preserved in permanent form with the use of ink or copying press. It is put up in neat tablets of the following sizes: POCKET, $4\frac{1}{4} \times 7\frac{1}{4}$, 50 sheets, price 30 cents; NOTE SIZE, $5\frac{1}{4} \times 8\frac{1}{4}$, 100 sheets, price 60 cents; LETTER SIZE, $8\frac{1}{2} \times 10\frac{1}{2}$, 100 sheets, price \$1. Subject to a liberal discount. PRINTED HEADINGS, on either the above, furnished to order.

Slates, Slate Pencils, Chalk, and School Supplies generally, at Lowest Prices.

CHARACTERISTICS AND USES OF ALUMINUM.

Aluminum is a white metal, of color between that of silver and zinc; is malleable and ductile, but requires repeated annealing during rolling or drawing into wire. Its specific gravity is 2.5 after casting, and becomes condensed to 2.7 after hammering. The melting point is between that of zinc and silver.

This metal, when pure, is not acted on by moist air, or sulphuretted hydrogen, and alloyed with silver or copper will retain polish and color better than pure copper or silver, or alloyed with other metals.

Cold nitric or dilute sulphuric acid has no perceptible action upon it, and but slowly in any of these acids in a heated state, but readily dissolves in concentrated muriatic acid.

The vegetable acids do not affect aluminum, and it is therefore well adapted for culinary or table utensils, for which purpose it is at present advantageously employed by French manufacturers.

The minerals from which the metal is extracted are not only very plentiful, but are more widely distributed than the ones of any other metal; its oxide forms the base of all clays, but is principally obtained from fluor spar, or cryolite, and mixed for extraction with salt and sodium.

The metal was first obtained by Sir Humphrey Davy, but in too an elementary form to be of any use; but Professor Wöhler obtained it for the first time as a gray powder in 1827, and after a series of experiments succeeded in preparing it in metallic particles in the shape of small globules.

For much of the knowledge of the present preparation of the metal, we are indebted to St. Clair Deville, and his improved process is patented by Rousseau Frères and Paul Morire, and worked by the Société Anonyme de l'Aluminium, in Paris, which sells the metals in bars at 130 francs—\$26 per kilogram—2 pounds. It is melted without any of the ordinary fluxes, and may be poured into the iron ingots for working, or into sand molds for ornaments.

The difficulty of soldering has hitherto impeded the application of this metal, as the solder cannot be got to run between the joints to be united, unless specially prepared, which, however, may be effected in a very simple manner by fusing some of the solder on each of the joints to be united, and then placing the soldered surfaces close together and exposed to the heat before the blowpipe, when the solders will unite, and the soldering will be effected. After soldering, the articles are placed in sulphuric acid, but not heated.

A good general solder is composed of 4 parts of copper, 5 parts of aluminum, and 90 parts of zinc; the copper is first melted, then the aluminum, with a little tallow added, and the mixture well stirred with an iron rod; then the zinc is carefully added, so as to avoid its oxidation as far as possible.

In the process of working, it requires to be repeatedly annealed, and may under this treatment be rolled to very thin plates or drawn into fine wire. In turning, it is advisable to cover the surface of the metal with a varnish of stearic acid in turpentine, and to dip the turning tool frequently into spirits of turpentine, which will prevent the tearing up of the metal.

The surface takes a fine polish, and the sheeted metal may be pressed and stamped into any shape.

A novel way of giving the finished article a pleasing appearance is to dip it into a mixture of

aqua fortis and fluoric acid, and rinse it well; it assumes not only an uniformly clean, but a bright and slightly frosted surface; the frosting can be increased by an excess of fluoric over the nitric acid.

Aluminum may also be deposited galvanically on any metallic substance in the following manner:

To a saturated solution of common alum is added gradually a saturated solution of sal-ammoniac or spirits of ammonia, which will form a precipitate of alumina. This precipitate is placed on a filter, washed and redissolved in a hot solution of neutral tartrate of potash, and the solution evaporated to dryness and then redissolved in sulphuric acid, and set by for crystallization and the crystals dissolved in water; it is then ready for depositing. No potash or cyanide is used. Any sort of battery may be used, and an anode of a sheet of aluminum or a bag of the above named alumina. The cleaning must not be done with potash or soda, as these substances act on the metal and dissolve it.

The great peculiarity of the metal is its low specific gravity, which specially adapts it for small weights in chemical laboratories; also its extreme sonorousness, for a small bar of the metal, when struck by a hard substance, will give the clear ring of glass.

Aluminum alloys readily with most of the metals, but is practically confined to the admixture with either silver or copper, or both combined; alloyed with a small percentage of silver, it yields an excellent metal for casting small ornamental articles, as it fills the mold well, and retains its lustre better than silver or any other white metal, with the exception of platinum, but is unfit for hammering, as the combination of these two metals makes it brittle; an addition of copper, or the using of silver alloyed with copper somewhat diminishes the brittleness, but impairs its white color.

Equal parts of platinum and fine silver realizes a very superior metal for electro-plating; articles plated with this alloy possess the color and lustre of silver and are not blackened by sulphuretted hydrogen. Alloyed with 90 per cent. of copper, it has the color of 18-karat gold, is extremely hard and takes a fine polish; is very malleable and possesses a tenacity equal to that of steel. This alloy is generally termed aluminum-bronze.

Articles made of aluminum or its alloys may be gilded or silver-plated in the same manner as any other metal.

Alum'nium is at present extensively employed for nautical, philosophical and optical instruments, for balances of fine scales for weighing small particles in laboratories, and especially for apparatuses and instruments requiring a low specific gravity. For the settings of the lenses in eye-glasses and opera glasses it affords a very pleasing appearance, and its use is contemplated for spectacles and eye-glasses.

The application of aluminum has been suggested as a very useful metal for watch-wheels, on account of its lightness, and as a pleasing contrast to the gilded plates and bridges.

In the shape of leaf it is extensively used, and offers special advantages for ornamentations of bookbindings and all kinds of fancy leather goods, and has for these purposes entirely superseded the application of silver. It is also employed for covering articles of wood or iron which are exposed to wind and weather, such as signboards, palings, ornaments on shop fronts, &c., as it retains its lustre without a covering of varnish far superior to silver. Made into powder, it is specially adapted for bronzing cast-iron or zinc goods, and lastly, for pyrotechnical purposes to produce a pale blue color for fireworks.

RUBBER HOLDER.

What Those That Use Them Say :

Judge R. F. Crowell, Post Office Department, Washington, D. C.:—"It fills the bill; is the best I have ever seen. Its use would be advantageous to the Treasury Department."

Hon. Ben. Butterworth, M. C.:—"A very superior office pen."

R. M. Reynolds, First Auditor Treasury Department, Washington, D. C.:—"Its simplicity and enduring qualities will commend it to public attention and confidence."

Hon. J. M. McGrew, Auditor Post Office Department, Washington, D. C.:—"Am much pleased with it. It fills a long-felt want."

Col. D. W. McClung, Collector of Customs, Cincinnati, O.:—"It works perfectly. The most convenient pen I have ever found."

From Rev. Wm. L. Harris, D. D., LL. D., Bishop M. E. Church, N. Y.; Rev. S. M. Merrill, D. D., LL. D., Bishop M. E. Church, Chicago, Ill., and John M. Phillips, Manager Methodist Book Concern, New York:—"We concur in the commendations herein given of Walke's Flexible Fountain Pen."

The only Fountain Pen made that is Flexible, and by which the flow of Ink can be regulated. No Blotting. No Soiling the Hands. The perfection of mechanics. Absolutely certain in its flow and action. Each Pen warranted.

From John Holland, Manufacturer of our Gold Pens, Cincinnati, O.:—"I consider it the simplest and best Fountain Pen I ever saw."

From Hon. Lewis D. Campbell, ex-M. C., Hamilton, O.:—"It is invaluable. Writes better than the ordinary Gold Pen. Is really wonderful. Always ready, always convenient."

FALL ANNOUNCEMENT.

POTSDAMER & CO.,

No. 321 Chestnut Street, Philadelphia, Pa.

Lithographic Art Publications.

Messrs. Potsdamer & Co. are pleased to announce that they have now under way a new set of folds,
COMBINING THEIR

CELEBRATED LITHOGRAPHIC ETCHINGS WITH CHROMO LITHOGRAPHY.

The first time this has been attempted, on account of the difficulty in registering Engraved with Color Work.
The numbers of these goods will be:

No. 125—Size 7×9¼.....4 Designs. | No. 126—Size 5×7¼.....5 Designs. | No. 127—Size 4½×6.....5 Designs.

FOLDING SINGLE ADVERTISING CARDS,

Equal in design and finish to and at less than one-half the price of the same grade of goods in steel. No tints or colors are used for the effects, but the work is engraved and etched similar to steel and printed in Black.

27 Sizes, 138 Designs, in Black Etchings.

NEW BLACK FOLDS, of patterns far excelling all our work heretofore produced:

No. 24—Size 7 × 9¼ 5 Designs.
No. 25—Size 6¼ × 7¼ 5 Designs.

No. 26—Size 4½ × 6 5 Designs.
No. 27—Size 5 × 5½ 5 Designs.

Seven Sizes. CHROMO CARDS, 30 Designs.

 These Goods will all be Ready for Sale by August 1, 1881, at

A. M. COLLINS, COPE & CO., Sales Agts, 171 William St., N. Y.

POTSDAMER & CO., No. 321 Chestnut Street, Philadelphia, Pa.

PICTURE FRAMES.

It is quite possible for an amateur to make a good job in gilding picture frames. Make some size by boiling buffalo hide cut in pieces, also known as "gilders' spetches;" then smooth down the flats with emery cloth. Now melt some size, and add enough pipeclay to make it nearly of the consistency of cream, adding also a very small piece of tallow. Apply this all over the parts to be gilded, and allow it to dry. Now melt some more size, and give the frame two coats. Then, when it is thoroughly dry, it is ready for the gold size; do not put on too much. Let it stand over night, and it will be ready for gilding. If the gold size be bought ready made, it will merely require thinning with boiled linseed oil.

VEGETABLE LEATHER.

The London *Mechanics' Magazine* states that there are very extensive works at Stepney Green, London, in which great quantities of artificial leather are manufactured. In appearance it resembles common leather, and it is only by a very close scrutiny that the distinction between them can be detected. It is manufactured in webs fifty yards in length and four and a half feet in breadth, and is now much used for book-binding and several other purposes for which tanned calf and sheep skin are employed by us. It is also used by saddlers for making harness, and it may be made of any thickness desirable, and is capable of being stretched or cemented. India rubber is the principal substance of its composition, but there are other ingredients mixed with it whereby its leather qualities are secured. The method of making it is not given, and it appears that this is kept secret; but that such a substance is manufactured, sold, and used in large quantities is a fact of too great importance to be overlooked.

A Frenchman named Duvochel has invented a compressed kind of nacre, or pearl, made of the pulverized shell of the halotis, solidified with gelatine. Thus prepared, it will serve for inlaying or mounting in cabinet work, cartonnage, tabature and other industries, and the manufacture of fans, buttons, &c. This product can be figured, stamped, molded by pressure, poured out in the liquid state, and, in fact, takes every kind of form desired. It can be dyed in any color, polished and varnished by the processes used for tortoise shell, mother of pearl and other analogous substances. To render the shells thin and friable, they are submitted to a strong heat, which separates them into thin scales; they are then pressed in the cylinders of a flattening roller, and afterwards pounded in a mortar. It is then sifted to get rid of the dust, and the powder is treated with gelatine and shaped into any form required.

FRENCH WOOD POLISHING.—Fill up the pores of the wood with plaster of paris and water. When dry, oil with linseed oil, then apply French polish (which can be purchased at oil and color shops), through the medium of a rubber made of wadding. Place over rubber when charged with the polish solution a piece of soft calico rag and apply it to the wood, working the rubber in a circular direction until the pores are filled and the surface of the wood is glazed by the cohesion of the resinous deposit aided by friction. To make the rubber work pleasantly, apply just a drop of linseed oil to the surface of same. Let the work stand to harden, then repeat as before, finishing off with alcohol.

STRONG GLUE.

A glue which will resist the action of water is made by boiling one pound of glue in two quarts of skimmed milk. To make a strong glue for inlaying or veneering: Take the best light brown glue, free from clouds and streaks; dissolve this in water, and to every pint add one half gill of the best vinegar and one half ounce of isinglass. For fire and water-proof glue, mix a handful of quicklime with four ounces of linseed oil; thoroughly lixiviate the mixture; boil it to a good thickness, and spread it on tin plates in the shade. It will become very hard, but can be dissolved over a fire, like common glue, and is then fit for use.

A new and probably the real cause of the difficulty often experienced in receiving clear transmissions of telephonic messages has been discovered by M. Gaiffe, although it does not altogether seem to account for the phenomena usually ascribed to induction. He cut two equal lengths of rods from the same bar of steel, and having strongly magnetized one of them, introduced both into a telephonic circuit. Both of the rods were then struck in the same way with the following result: The magnetized rod produced great noise in the telephone; the other rod very little. The practical meaning of this is that as iron is the substance usually employed in making the conducting wires of telephones, and is subject, therefore, when moved in the magnetic field of the earth to strong induction currents, copper or some such non-magnetic material should be substituted for iron.

A company comprising a number of the business men and capitalists of Cincinnati has been organized under the name of the American Iridium Company, with a subscribed capital of \$240,000 for buying, manufacturing and selling iridium.

BLEACHING IVORY.

A. H. Mason, in discussing the properties of peroxide of hydrogen, before the Liverpool Chemists' Association, said: "It is used in Sheffield to bleach the interior ivory for knife handles. The liquid is supplied by an ivory dealer in London, and consists of an aqueous solution of peroxide of hydrogen, of which it contains 2.9 per cent. of rather crude H_2O_2 . The mode of procedure is as follows: Place, say, two quarts of the liquid in a stone pot, adding four ounces liquid ammon. fort. 890°, immerse the handles, and put over a common shop-stove for 24 to 36 hours. The handles are then taken out and gradually dried in the air, not too quickly, or they would split. The deep color of the ivory is removed, and a beautiful pearly white ivory results when polished."

A rare American book was found in a collection recently sold in London. It was a copy of the Common Prayer, translated into the Mohawk language for the use of the Indians, and published at New York in 1715. Few copies of this edition survived the expatriation of the Mohawk tribes to Canada, for aiding the British in the war of independence.

PHOTO TRACINGS IN BLACK AND COLOR.

Two new processes for taking photo tracings in black and color have recently been published—"Nigrography" and "Anthrakotype"—both of which represent a real advance in photographic art. By these two processes we are enabled for the first time to accomplish the rapid production of positive copies in black of plans and other line drawings. Each of these new methods has its own sphere of action; both, therefore, should deserve equally descriptive notices.

For large plans, drawn with lines of even breadth, and showing no graduated lines, or such as shade into gray, the process styled "nigrography," invented by Itterheim, of Vienna, and patented both in Germany and Austria, will be found best adapted. The base of this process is a solution of gum, with which large sheets of paper can be more readily coated than with one of gelatine; it is, therefore, very suitable for the preparation of tracings of the largest size. The paper used must be the best drawing paper, thoroughly sized, and on this the solution, consisting of 25 parts of gum arabic dissolved in 100 parts of water, to which are added 7 parts of potassium bicromate and 1 part of alcohol, is spread with a broad, flat brush. It is then dried, and if placed in a cool, dark place will keep good for a long time. When used, it is placed under the plan to be reproduced, and exposed to diffused light for from five to ten minutes—that is to say, to about 14" of Vogel's photometer; it is then removed and placed for twenty minutes in cold water, in order to wash out all the chromated gum which has not been affected by light. By pressing between two sheets of blotting paper the water is then got rid of, and if the exposure has been correctly judged the drawing will appear as dull lines on a shiny ground. After the paper has been completely dried it is ready for the black color. This consists of 5 parts of shellac, 100 parts of alcohol, and 15 parts of finely powdered vine black. A sponge is used to distribute the color over the paper, and the latter is then laid in a 2 to 3 per cent bath of sulphuric acid, where it must remain until the black color can be easily removed by means of a stiff brush. All the lines of the drawing will then appear in black on a white ground. These nigrographic tracings are very fine, but they only appear in complete perfection when the original drawings are perfectly opaque. Half tone lines, or the marks of a red pencil on the original, are not reproduced in the nigrographic copy.

"Anthrakotype" is a kind of dusting-on process. It was invented by Dr. Sobacchi, in the year 1879, and has been lately more fully described by Captain Pizzighelli. This process—called also "Photanthrakography"—is founded on the property of chromated gelatine which has not been acted on by light to swell up in lukewarm water, and to become tacky, so that in this condition it can retain powdered color which had been dusted on it. Wherever, however, the chromated gelatine has been acted on by light, the surface becomes horny, undergoes no change in warm water, and loses all signs of tackiness. In this process absolute opacity in the lines of the original drawing is by no means necessary, for it reproduces gray, half-tone lines just as well as it does black ones. Pencil drawings can also be copied, and in this lies one great advantage of the process over other photo-tracing methods, for, to a certain extent, even half-tones can be produced.

For the paper for anthrakotype an ordinary strong, well sized paper must be selected. This must be coated with a gelatine solution (gelatine

SPRINGFIELD, MASS.

Best Eraser in the World. No School complete without them.

1, water 30 parts), either by floating the paper on the solution, or by flowing the solution over the paper. In the latter case the paper is softened by soaking in water, is then pressed on to a glass plate placed in a horizontal position, the edges are turned up, and the gelatine solution is poured into the trough thus formed. To sensitize the paper, it is dipped for a couple of minutes in a solution of potassium bichromate (1 in 25), then taken out and dried in the dark.

The paper is now placed beneath the drawing in a copying frame, and exposed for several minutes to the light; it is afterward laid in cold water in order to remove all excess of chromate. A copy of the original drawing now exists in relief on the swollen gelatine, and, in order to make this relief sticky, the paper is next dipped for a short time in water, at a temperature of about 28° or 30° C. It is then laid on a smooth glass plate, superficially dried by means of blotting paper, and lampblack or soot evenly dusted on over the whole surface by means of a fine sieve. Although lampblack is so inexpensive and so easily obtained, as material it answers the present purpose better than any other black coloring substance. If now the color be evenly distributed with a broad brush, the whole surface of the paper will appear to be thoroughly black. In order to fix the color on the tacky parts of the gelatine, the paper must next be dried by artificial heat—say, by placing it near a stove,—and this has the advantage of still further increasing the stickiness of the gelatine in the parts which have not been acted upon by light, so that the coloring matter adheres even more firmly to the gelatine. When the paper is thoroughly dry, place it in water, and let it be played on by a strong jet; this removes all the color from the parts which have been exposed to the light, and so develops the picture. By a little gentle friction with a wet sponge, the development will be materially promoted.

A highly interesting peculiarity of this anthrako-type process is the fact that a copy, though it may have been incorrectly exposed, can still be saved. For instance, if the image does not seem to be vigorous enough, it can be intensified in the simplest way; it is only necessary to soak the paper afresh, then dust on more color, etc.: in short, repeat the developing process as above described. In difficult cases the dusting on may be repeated five or six times, till at last the desired intensity is obtained.

By this process, therefore, we get a positive copy of a positive original in black lines on a white ground. Of course, any other coloring material in a state of powder may be used instead of soot, and then a colored drawing on a white ground is obtained. Very pretty variations of the process may be made by using gold or silver paper and dusting on with different colors; or a picture may be taken in gold bronze powder on a white ground. In this way colored drawings may be taken on a gold or a silver ground, and very bright photo tracings will be the result. Some examples of this kind that have been sent us from Vienna are exceedingly beautiful.

Summing up the respective advantages of the two processes we have above described, we may say that "nigrography" is best adapted for copying drawings of a large size; the copies can with difficulty be distinguished from good autograph, and they do not possess the bad quality of gelatine papers—the tendency to roll up and crack. Drawings, however, which have shadow or graduated lines cannot be well produced by this process. In such cases it is better to adopt "anthrako-type," with which good results will be obtained.—*Photographic News*.

OZONE.

Ozone was discovered by Schonbein twenty-five years ago. He gave it the name of ozone, which means smell, because he first ascertained its presence in his laboratory by its odor, which is something like that of phosphorus, noticeable sometimes immediately after very loud thunder and vivid lightning. Schonbein had observed the same odor some years before, in 1840, at the positive pole of a platinum battery, used in decomposing water by electricity, and the same afterward in the slow combustion of phosphorus and ether.

The presence of ozone in the atmosphere may be ascertained thus: Starch a piece of soft paper or muslin and dip it into a solution of iodide of potash, then expose it to the air; it turns brown first, and, when moistened, gives various shades of a pinkish blue, more or less deep, according to the greater amount of ozone contained in the air; a scale has been made of 10 degrees, showing the relative amounts of ozone with the accuracy of a thermometer measuring the degree of heat or cold. The principal European chemists consider that a more accurate and sensitive test of the presence of ozone in the atmosphere is made by saturating strips of paper with the tincture of guaiacum.

If the air contains one fifty thousandth part of ozone its odor is perceived, and yet so delicate is the test of the scale that four degrees lower its presence is manifest. If one five thousandth part of ozone is in the air breathed, insects die by being consumed—burned up; for, as oxygen is the great oxidizer in the universe, and ozone being an electric or more powerful or concentrated form of oxygen with greater freedom and perfectness, it may be considered the fire of fire to all insect life. Although so little ozone in the atmosphere is required for health, yet, as this proportion diminishes, epidemic diseases are sure to appear; this has been repeatedly noticed by scientific men, from which the inference may be safely drawn that the less ozone there is in the air, the more full it is of that kind of life which corrupts the blood; while the larger presence of ozone destroys this life, and we say "the air is so pure and lovely."

The *Paper Trade Journal* has for its motto, "The Consumption of Paper is the Measure of a People's Culture." This is true. Whether the paper is print, writing, wrapping or toilet paper. Perhaps the last mentioned, while as yet the smallest interest in value, is the best measure of them all. A few years only have elapsed since the introduction of "Gayety's," which was the pioneer brand. The consumption of toilet paper has almost doubled every year since, until now, when the probable consumption amounts to half a million dollars' worth per annum, showing that it only needs the introduction of improvements for the American people to "show the measure of their culture." The possibilities of this branch of the trade are very large, as may be seen when we reflect that seventy-five cents per annum will pay for as much toilet paper as any one individual—even if extravagant—can use. This shows that as yet scarcely one in a hundred of our population is a consumer. This may be accounted for by their not having had their attention called to the goods. If the old newspaper and other waste printed matter so hurtful for this use, was saved and sold to the "ragman" it would pay for all the toilet paper. This has been proved by one of our dealers. Among those who have helped to bring out these goods is C. C. White, of 38 and 40 Reade

street, whose advertisement appears in another column. He has introduced new styles of wrappers and strong wire hooks to suspend the package. Besides several low priced brands, his Witch Hazeline, actually medicated with extract of witch hazel, and his Sterling brands are meeting with much favor. He claims that any one once using "Sterling" paper, which is put up in a handsome tag paper box, will never after want

paper wrapped in any other manner. This box serves as a pocket on the wall, or it may be laid down anywhere, doing away with all scraps or corners of sheets flying about.

Truth is the bond of union and the basis of human happiness. Without this virtue there is no reliance on language, no confidence in friendship, no security in promises and oaths.

Since our introduction of Duck Bound Blank Books throughout the United States, we have added largely to our variety of bindings, and for the past two years have successfully introduced the NOW POPULAR SLATE COLOR.

MARK TWAIN'S

In New and Beautiful Embossed Designs, for the Holidays.

SCRAP BOOK.

CATALOGUES MAILED ON APPLICATION.

PERFECTED STYLOGRAFIC.

The original and genuine Pen. Warranted the best made. Thirteen Patents granted to **A. T. CROSS**, the last, June 20, 1880, being the most important and giving the name **Perfected**. All cuts are exact size.

MAXIMUM.—Holds most ink of any pen made; tires the hand less than smaller barrels. Fits Hamble's Pocket. Same price as Long.

LONG.—The famous Desk Pen. Extra long. Holds most ink, except the **Maximum**.

SHORT.—Most widely known and sold heretofore; but **Maximum** and **Long** are

much better for desk or Hamble's Pocket. So this will be largely superseded.

Thirteen patents granted; seven more applied for; more genuine improvements; better record; more styles; larger stock; more thoroughly protected by patents than all rivals combined.

See Descriptive Circulars.

GIANT, with Cord and Gold Ring, same price as **Short**.

Dealers and agents supplied with wood, glass and paper signs, placards, circulars, leaflets and cuts. We make both largest and smallest Pens, all of which will have the new improvements.

See Descriptive Circulars.

LITTLE GIANT, Plain, - \$3.00.

All Styles up to \$4.50.

BYRON WESTON

DALTON, MASS., U. S. A.,

HAS BEEN AWARDED THE

GRAND PRIZE GOLD MEDAL

AND RECOMMENDED THE

Medal of Honor and Perfection

At PARIS, 1878,

This being the **HIGHEST** and **ONLY** AWARD given for

LINEN RECORD & LEDGER PAPER.

—A SPECIALTY.—

THIS Paper has received THE HIGHEST PREMIUM over all others from the Cincinnati Industrial Exhibition, Massachusetts Charitable Mechanics' Association, Franklin Institute of Philadelphia, Louisville Exposition, Medal and diploma from United States Centennial Commission, Medal of Progress American Institute, 1877, and Medal of Improvement and Progress, Boston, 1878. Its

PRINCIPAL ADVANTAGES

are as follows:—1. It contains more LINEN than any other Ledger Paper, has a longer fibre, and is, consequently, tougher. 2. Having a harder and better body, it frays less in erasure, so that by simply using the rubber after the eraser, the ink is prevented from spreading. 3. It is more uniform in Weight Color and Finish. 4. It never cockles if properly bound. 5. Its chemical action upon ink is such that it both writes and rules up better. For proof of the foregoing, refer to a large number of Stationers, Bookbinders, Bookkeepers, and Recorders, who have given it, after a severe test, the preference over all others. This paper is *Double Sized*, and will stand any climate or the most acid of fluid inks.

Send for sample sheet, **ERASE** and **REWRITE FOUR TIMES** on same spot.
Each sheet is water-marked with name and date.

The American Stationer

A JOURNAL DEVOTED TO THE INTERESTS OF THE STATIONERY & FANCY GOODS TRADE

"The Stationer"—Every Thursday—\$2.00 Per Annum.

VOL. X.—NO. 4.

NEW YORK, JULY 28, 1881.

WHOLE NO. 318.

BOSTON NOTES.

[FROM OUR REGULAR CORRESPONDENT.]

BOSTON, Mass., July 25, 1881.

A very large volume of trade can hardly be expected in midsummer, still the stationers have no fault to find with the position. Although I have no special features to report, perhaps a generalization of the situation may suffice.

A "round" among the dealers was made this morning, and all were found doing more or less in a quiet way. The State street dealers, Thos. Groom & Co., Aaron Gay & Co., and Doane & Greenough, whose retail and jobbing business in part is confined to the vicinity of the banks and leading wholesalers in the city, say they have thus far enjoyed the best summer trade experienced in many years. The blank book trade has been unusually good.

Other dealers in heavy stationery also report the same story, although the aggregate is light compared with the regular busy seasons of the year. The Devonshire street dealers, Winkley, Thorp & Dresser, Lucien Sanderson & Co., and Ward & Gay, have all done a fair business during the past month; but each of these concerns is preparing for the fall trade on quite an extensive scale. Their correspondents, as well as those of other houses I might mention, advise them of a large prospective trade and a willingness on the part of dealers to purchase liberally.

On Arch street, Dennison & Co., Gunn, Bliss & Curtis, H. T. Johnson & Co., and King & Merrill, all report a very satisfactory trade for this season of the year. Dennison & Co., as intimated in a previous letter, expect to sell more goods next season than ever before in the history of their trade.

On Milk street the stationers have no fault to find, although they report no rush and crush of business, but a good, fair trade, usually characteristic of this season of the year. Lewis, Hooper & Co. never had a more seasonable stock than they have at the present time, and the facilities of this house are among those which are fully equal to any emergency. Page, Spaulding & Co., Philbrick, and Knight, Adams & Co. report considerable doing, and all expect to sell very liberally when the season fairly opens.

C. K. Darling, Exchange street, one of the oldest stationers in the city, keeps a full line of goods, especially blank books.

B. F. Trufont & Co., 105 Summer street, New England agents for Foye's folio file and binder, report a good trade for this season of the year.

Among the manufacturers of art novelties, J. H. Bufford's Sons report a remarkable activity in advertising cards; and this instance is a good thermometer of the drift of general business.

This firm report also a fair demand for other novelties. Their works at Harrison Square present a perfect beehive of industry.

The elastic bands and wigs manufactured by the Davidson Rubber Company are always in demand.

The Government fountain pen, sold by Lucien Sanderson & Co., manufacturers, 103 Devonshire street, is specially adapted for correspondence and bookkeeping, and must meet with an extensive sale.

Carter, Rice & Co., Alex. H. Rice & Co., and other paper manufacturers report a good feeling in the market.

In the line of specialties, Samuel Hano & Co. report an increasing demand for their manifold order and letter books; Ward & Gay are selling a good many fine papers and other goods in their special line; and L. E. Dunlap, the Boston agent for Livermore's new stylographic pen, reports increased sales of this indispensable article.

It will thus be seen that the stationery trade in this city is in a healthy condition; but dealers don't care how quick a rush comes. L.

BALTIMORE NOTES.

[FROM OUR REGULAR CORRESPONDENT.]

BALTIMORE, Md., July 26, 1881.

Your subscribers in this city were particularly well pleased with the last issue of THE STATIONER, and, owing to the midsummer dullness in business, they had ample time to peruse its interesting columns and note the announcements for the coming fall season. I told you some time ago all about our sesqui-centennial celebration, which gave an impetus for a time to all classes of business. We felt proud and happy over our success, and, as loyal Baltimoreans, were gratified at the little stir we then made in the country. And now we're at it again! Committees of merchants and business men in general have been formed to effect arrangements for a grand mardi gras merry-making in October. Why our papers insist on calling it mardi gras is a thing "no fellah can understand," except it be that it will contain all the tableaux and effects used in the Fat Tuesday celebration in New Orleans. Carnival would be a better name for it; but, carnival or mardi gras, it will do the city good, and the printer will reap the benefit even long before the fun commences. Our races and county fair will take place about the same time, and will add materially to the business boom engendered by the carnival.

Representatives of the trade in town during the past week were from the New York Blank Book Company, Baker, Pratt & Co., Anthony

& Co., the Pennsylvania Ink Company and Marcus Ward, the latter with a handsome line of Christmas and New Year's cards.

Many of our leading booksellers and stationers are away at the mountains or seaside. John B. Piet, Jr., and Stephen Tongue have just returned from a brief trip, and M. Weil, of Guggenheimer & Weil, is temporarily stopping at Magnolia, on the Philadelphia, Wilmington and Baltimore Railroad. Mr. Guggenheimer will shortly start for Cape May to cool off and recuperate for the coming season.

J. B. Piet's press room is busy turning out school books for the fall season, and will have a complete assortment ready by the time the vacation is over. Father Ryan, the poet priest, is a guest at Mr. Piet's hospitable home, at Luther-ville, Baltimore county, and will probably soon furnish sufficient copy for a second volume of his beautiful poems. W. P. M.

OHIO NOTES.

[FROM OUR REGULAR CORRESPONDENT.]

DAYTON, O., July 25, 1881.

Vennor's prediction of the hottest day of the season has not at ten A. M. been fulfilled by about twenty degrees; still, it is warm enough for any reasonable man.

Fall trade is just beginning with our jobbers, and indications point to a satisfactory trade. I don't look for an extra large amount of business through this section. Crops of every description are below an average; wheat at least 20 per cent. short. Corn does not show very well, but good weather may bring it out. Fruits of all kinds are very scarce, and that interest is a very important one in Southern Ohio. Tobacco does not promise well. As the amount of business done depends largely on the crops, you can draw your own conclusions as to the effect.

The Mead & Nixon Paper Company's mills were bought at auction by D. E. Mead and W. P. Levis, who will operate them under the firm name of the D. E. Mead Paper Company, with W. P. Levis as general superintendent. Mr. Levis has the reputation of being one of the best paper makers in the West, and has always made money in every mill with which he has been connected. He will proceed at once to remodel the mill and put it in first-class condition.

The failure of A. Hill & Sons, at Middletown, was a surprise to most of the trade. The general opinion is that wood pulp did it. Their chemical wood pulp works have been a continual loss to them, as they have burnt out twice and had to be continually repaired. I hope to hear of their being able to resume business at

once. I presume that some arrangement will be made so that the mills will not be idle.

C. V. Osborn is East buying goods, and incidentally would take in a few bluefish should they get in his way. C. J. Coffman is also in New York on a similar errand.

Mr. Brown, of Willy Wallach, carrying samples of Tuck's Christmas cards, was in our city last week. He has a very fine line of goods.

Mr. Guggenheim, of F. Bergner & Co., Baltimore, shows some very fine samples of picture frames and easels.

J. C. Hallenbeck, of J. Q. Preble & Co., was also around, and says that, despite the hot weather, trade has been good.

Lou Reynolds has recovered from the effects of his sunstroke, and finds some disadvantages in being six feet six; it brings old Sol entirely too close.

Reynolds & Reynolds are working sixteen hours a day in order to keep up with their orders. Trade was never better they say, as their sales are made all over the country. Local causes do not effect them to a very large extent.

R. A. Rogers has returned to the

MIAMI VALLEY.

THE LONDON EXHIBITION.

[FROM OUR REGULAR CORRESPONDENT.]

ARICULTURAL HALL, London, July 16, 1881.

The exhibition is at length open and in tolerable order. All the stands are up, but a few are still unfinished.

Taking it all round, I don't consider this year's Exhibition better or worse than last. It is of a somewhat different composition. Different people are here, and large firms who were here last year are absent, and firms absent last year are now exhibiting. Taking the whole thing into consideration, I can't see any great improvement or decline. There is not a single paper maker exhibiting, which is a powerful index of the feeling of the trade towards exhibitions. But paper machinists are here in full force, and some new things, especially in strainers, are to be seen. All the great firms—in fact, all the firms but three—are here, and make good shows. Raw materials are well exhibited—better than last year, but not a sheet of English paper is to be seen.

The stationery show is poor. There is a strong exhibit of pictorial and art things; but the backbone of the trade is not here. The colored almanac, poster, trade card, store ornament, valentine, Xmas card, and that species of work are here in abundance; but I don't think this specialty is a satisfactory index of the stationery trade. Goodsell & Son, De La Rue & Co., Marcus Ward & Co., Collins, Sons & Co., J. Walker & Co., the publishers, &c., are sadly missed.

The printing exhibit I don't understand; but it seems to be very adequately represented and very complete.

Journalism is here in more force, the *Graphic* and two "society" journals having large displays.

Paper Making is the only British paper trade journal present, and, I am glad to state, has done good business, as will be seen. The *Paper Trade Journal*, *AMERICAN STATIONER*, *American Mail*, *Lockwood's Directory*, &c., have a position here also.

W. F. C.

To remove the ink from copying pads it is best to employ a soft sponge dipped into water as hot as the hand will bear. Hold the collograph inclined over the basin, and wash without rubbing. Chill the surface by applying cold water. A great number of copies may be taken if the pad is dampened with a sponge dipped in cold water, when the print begins to get dim.—*Pharmacist*.

ARNHEM FAIENCE.

Little is known in America of this unique and beautiful ware, but all European collectors of Dutch and Belgium pottery are more or less familiar with the delicate jugs, elegant coffee pots, and graceful "corbeilles" and platters, decorated with "rocaille" ornaments and figures in Louis Quinze costume, marked with a blue cock under the glaze, and now generally called Arnheim faience. Being rare, these pieces are much sought after, and deservedly so; for their shapes are always of irreproachable taste, recalling those of old silverware, and their decoration, done by skillful hands, shows a lightness and a distinction rarely encountered in Dutch faience. Until very recently the origin of this beautiful ware was not exactly determined. M. Demmin, who is supposed to have been the first to investigate it, attributed the pieces for the most part to Amsterdam. "A German of Breslau," he says, "named Herzog, or in Dutch, Hartog, and known by the adopted name of Hartog van Laun, associated with a certain H. Brandeis, had established a faience factory in 1780 at Flake Field (?) near the Weesp gate. This factory ceased to exist about 1785, and the faience, generally heavy and in 'camaieu,' is no longer obtainable. It was marked with a cock in blue on the biscuit 'au grand feu.'" M. Demmin further says that he found a piece of the ware bearing this mark in the possession of Brandeis' son, who was then an old man of over eighty, but he gives no evidence concerning this alleged Amsterdam factory, beyond his own rather vague assertions, a fact the more to be regretted since Albert Jacquemard, upon the faith of M. Demmin's declaration, has also attributed this curious and interesting ware to Amsterdam.

An unexpected light has lately been thrown upon this question by the discovery of a ceramic treasure of special significance. This is the plaque now in the Evenepool collection at Brussels. Scalloped above, it is ornamented in soft blue with a group of ladies and gentlemen, attired in the picturesque style made popular by Watteau, at one side, while on the other, on the bank of a river flowing in the second plane, are houses, one much larger than the rest being supposed to represent a factory. A cock, the peculiar mark of of this ware, appears above, perched upon a scroll on which we read "Arnhemse Fabrique"—Arnheim Factory. The existence of this plaque being made known in 1872 to M. Demmin, he forthwith concluded that Hartog van Laun must have established a branch of his Amsterdam factory at Arnheim, which is a good-sized fortified town, situated about fifty miles southeast of Amsterdam on the right bank of the Rhine, the river shown on the plaque.

This inference, however, appeared quite unwarranted to Henry Havard, a well known author and authority on art matters. Seeing no real evidence that any of the ware marked with a cock was made at Amsterdam, he came to the conclusion that it was all the product of the Arnheim factory, whose existence was so clearly indicated by the curious plaque already described. To support this theory, he made a patient and eminently successful investigation, the results of which were published a year or two ago. Reasoning that there must be some mention of the existence of the "Arnhemse Fabrique" in the Arnheim archives, M. Havard visited that town in 1875, but the keepers of the local records could give him no information. Some time after he was fortunate enough to find in the archives of Delft, under date of 1784, a

reference to a porcelain factory which had existed at Arnheim in 1755, but had subsequently been abandoned. Armed with this clew, he returned to Arnheim and began a personal examination of the records of a century and a quarter ago. This time his search was abundantly rewarded. He found no trace of Hartog van Laun or Brandeis, M. Demmin's supposed manufacturers, but he discovered instead Johan (or Jan) van Kerkhoff, who was recorded in a town ordinance, dated February 6, 1761, as having opened a porcelain factory outside the Rhine gate, and as having obtained for himself, his children, associates and workmen the right of passing through the gate in question without payment of toll. About this time the factory was apparently flourishing, for the records of the following year show an application for increased accommodations for washing earth. In 1764, however, some financial embarrassment is indicated by an application for a remission of the tax on the wood used to heat his furnaces. This was granted, but the records are silent thereafter concerning the "Arnhemse Fabrique," and the town register shows that the proprietor died in 1773. M. Havard also discovered that Van Kerkhoff was born in 1716, in the town he was destined to make illustrious by his ceramic skill and enterprise, and that he was married in 1742 and had no less than ten children, one of his direct descendants being to-day a counsellor of the court of Arnheim.

Having recorded Havard's discovery of a forgotten but deserving potter, it remains to notice a little more particularly the characteristics of Van Kerkhoff's work, of which, so far as we know, there is not single piece in this country. Messrs. Evenepool, at Brussels, have undoubtedly the only complete collection of Arnheim faience in existence. Among noteworthy isolated specimens which may be mentioned in passing are the fountain owned by Paul Dalloz, the beautiful coffee-pot in the Van Romond collection, the coffee-pot, unfortunately broken, exhibited by M. de Liesville at the Paris Exposition of 1878, under the name of "faience of Amsterdam," and the platters of M. Fétis, of Brussels, and Mr. Reynolds, of London. The Messrs. Evenepool, after long experience as collectors of Delft ware, of which they have some three hundred admirable and well preserved specimens, turned their attention to Arnheim faience, and began to purchase every good example of this ware that they could find, the result being the present unique and beautiful collection.

Careful study of the Messrs. Evenepool's specimens shows that the Arnheim faience passed in its short career through three distinct periods. At first it was an imitation of the Delft ware, and, except for the mark of the cock, numerous pieces would certainly be taken for products of Delft. These are chiefly platters and "corbeilles," in polychrome and gilt, decorated with Chinese motives in light relief on a beautiful milk-white ground. After the first period the Arnheim ware seems to have occupied a field entirely original. The polychrome decoration was abandoned for "camaieu" and the Oriental forms of European models. Numerous pieces of this period seem to have been fashioned after the designs then in vogue for goldsmith's work, the amorous or pastoral scenes of Watteau and his compeers taking the place of the less pictorial but more decorative floral and geometrical designs of China and Japan. It is this period of the Arnheim faience that is the most rich and remarkable. The biscuit continues to be thick and a little heavy, and the groundwork is always the same beautiful milky-white. The "camaieu"

decoration is always blue—not the hard and dazzling blue of Delft, but a quiet, shaded blue, verging toward gray; sweet and harmonious rather than rich or brilliant. The drawing is always correct, elegant and delicate, and the shadows are transparent and soft. Most of these beautiful works are decorated under the glaze, which lacks the hardness and brilliancy of that of Delft, and presents a very different appearance. Indeed, the character of this period is so peculiarly individual that, after once carefully examining a specimen, it is easy to recognize the Arnhem faience at a glance.

During the third period of the manufacture, Van Kerkhoff appears to have applied himself to copying the porcelain of Saxony. This was natural enough, in view of the popularity of the wares of that country, which had given such a wonderful stimulus to ceramic industry.

Nevertheless, it was a grave mistake for Van Kerkhoff, for he could not, with the heavy clay of Arnhem, compete successfully with the delicate transparent pastes of Meissen and Berlin, nor could his Dutch artists, who had produced such broad, generous effects on the original Arnhem ware, counterfeit successfully the miniature decorations of the Saxon painters. To this degenerated period must be referred the "camaieu rose" coffee pots, the polychrome butter dishes, and all the specimens where the imitation of Saxon models has destroyed the originality characteristic of the second period. Throughout its career the Arnhem faience retained the mark of the cock, which still proudly figures in the coat-of-arms of the Van Kerkhoff family.—*The Art Amateur*.

ORIGIN OF THE MINUTE AND SECOND.—Why is one hour divided into sixty minutes, and each minute again into sixty seconds? This question is often asked by intelligent children, and the answer is this: We have sixty divisions on the dials of our clocks and watches because the old Greek astronomer, Hipparchus, who lived in the second century before Christ, accepted the Babylonian system of reckoning time, that system being sexagesimal. The Babylonians were acquainted with the decimal system, but for common or practical purposes they counted by *sossi* and *sari*, the *sossos* representing sixty, and the *saros* sixty times sixty—thirty-six hundred. From Hipparchus, that mode of reckoning found its way into the works of Ptolemy about 150 A. D., and hence was carried down the stream of science and civilization, and found the way to the dial plates of our clocks and watches.

Experiments on radiophony are still conducted by M. Mercadier. Lately he reflected light from a piece of silvered glass, behind which is a small reservoir of air, having a thin plate of mica or caoutchouc, which receives the sounds to be transmitted through a tube. At the place to which the light is sent one of the author's small glass tubes, with a smoked piece of mica, is used to receive the light, which is there concentrated by a lens or concave mirror. With this arrangement speech was distinctly, though faintly, heard at a distance of about twenty miles, although the windows of the room in which the speaker was stationed had been closed. It was also found that the solar rays gave the best effects when they were hottest, and that alum solutions and very thin plates of ebonite, zinc, copper and aluminum, when interposed, lessened the intensity of the sound.

Success is full of promise till men get it; and then it is a last year from which the bird has flown.

L. PRANG & CO.'S

Christmas and New Year Cards

ANNOUNCEMENT.

WE hereby beg leave to announce to the trade the completion of our line of Christmas and New Year Cards for this season, for which our agents are now soliciting orders. The extent of our list, the originality, and especially the American character of our designs, together with the great care taken in their execution, will, we have no doubt, secure for our goods the popularity which they have enjoyed heretofore. The efforts we have made to secure the highest excellence, is attested by the names of some of the artists whose designs have been reproduced. We would only name Elihu Vedder, C. C. Coleman, Thomas Moran, Miss Rosina Emmett, Miss Dora Wheeler, Mrs. O. E. Whitney, W. H. Gibson, F. S. Church, R. G. Birch, &c. That a due regard has been paid for the quality of the literary matter, in connection with these designs, is shown by the fact that many of the designs are accompanied by original poems from writers of note, such as Mrs. Celia Thaxter and Mrs. Emily Shaw Forman.

The great increase of our manufacturing facilities, secured by additions to our building nearly doubling our floor space and by the adding of new machinery, will place us in a position to fill orders promptly. Still we would request dealers to place their orders as early as possible, so as to still further enable us to make timely preparation for prompt deliveries.

Our Cards will, as heretofore, be put up in envelopes containing twelve Cards, unless otherwise stated on our price lists.

We furnish envelopes without extra charge for all our Christmas and New Year Cards, for which the list price is \$1.80 per set, and over. Our silk-fringed Cards will no doubt be in great demand this season. We have made ample preparation to furnish these in time and have made arrangements with our manufacturers for the best quality of silk fringes. We would call special attention to the excellence of our fringed Cards and the novelties in colors and style of fringes we offer for this season.

A marked and attractive feature of our cards are the elegantly ornamented backs.

All our fringed Christmas and New Year Cards are furnished with envelopes and protectors, so as to insure safe transportation in the mails.

It will be impossible to embody our whole list in the space of the advertisement, and we will therefore merely give a general outline of the variety offered.

PRANG'S PRIZE CHRISTMAS CARDS. COMPETITION OF 1881.

These are the Cards selected by the judges in the second competition for four designs of Christmas Cards, for which we offered \$2,000 in prizes of \$1,000, \$500, \$300 and \$200 respectively. At the recommendation of the judges, Messrs. COLEMAN, LAFARGE, and WHITE, the prize for third best Card was increased to \$500. Mrs. CELIA THAXTER has written appropriate verses for each of the designs.

- 1st Prize Card (\$1,000), by Elihu Vedder. Size, $6\frac{1}{4} \times 9$ inches; price \$1 each. Same card with silk fringe, cord and tassels, price \$1.50 each.
 2d Prize Card (\$500), by Miss Dora Wheeler. Size, 7×9 inches; price 75c. each. Same card with silk fringe, cord and tassels, price \$1.25 each.
 3d Prize Card (\$500), by C. C. Coleman. Size, 7×9 inches; price 75c. each. Same card with silk fringe, cord and tassels, price \$1.25 each.
 4th Prize Card (\$200), by Miss Rosina Emmett. Size, $5\frac{1}{4} \times 9\frac{1}{4}$ inches; price 60c. each. Same card with silk fringe, cord and tassels, price \$1 each.

The Prize Cards can also be had mounted on heavy board with gilt beveled edges.

We beg to call attention also to the following publications for New Year and Christmas:

- "Goddess Fortune" New Year Card, by Elihu Vedder. Size, $6\frac{1}{4} \times 8\frac{1}{4}$ inches; price 75c. each. Same card with silk fringe, cord and tassels, price \$1.25 each.
 "Christmas Dove." Size, $7 \times 9\frac{1}{2}$. This card is in the same style as the success of the last Easter season, the "Easter Dove." Price 60c. each. Same card with silk fringe, cord and tassels, price \$1 each.

Our Regular Line of Christmas Cards consists, among others, of the following Series:

- Nos. 901, 902, 903, 906, 909, 910. Floral designs ranging in price from 20c. to \$1.20 per set of 12.
 Nos. 904, 905. Humorous Cat and Frog Designs, 60c. per set.
 No. 907 is a new series of Horseshoe designs, 75c. per set.
 Nos. 920 and 929. Children's designs, at \$2.40 and \$3.00 per set.
 No. 922. Shells of Ocean, with figures, \$2.40 per set.
 No. 924. Fans with silk fringes, \$3 per set.
 No. 933. Bric-à-Brac designs, very rich, \$6 per set, and many others.

We offer a similar assortment of New Year Cards, but would call special attention to No. 1320, a new folding calendar, at \$2.40 per set. Most of the Numbers can be had with silk fringes ranging in price from \$2.25 to \$12 per set. Stock will be ready for delivery September 15.

Besides the above, attention is called to our New Birthday Cards, Scripture Texts Cards, New Panels, New Water Colors, by Thomas Moran, and other publications. Our line of Thanksgiving Day Cards will also be shown by our agents.

FOLEY'S Celebrated Gold Pens and Pencils THE FINEST AND BEST.

CIRCULAR.—To those engaged in mercantile pur-
suits, any invention that will facilitate their labor is
highly worthy of notice, as well as of extensive pat-
ronage. One of the most important inventions of
the present age is that of a pen that possesses the
necessary qualities of firmness in mark and durability
in use. Pre-eminently such are those of **JOHN**
FOLEY, Manufacturer of Fine Gold Pens and Pencils,
No. 2 Astor House. Their superior value is tested by
the long time he has been engaged in our city in their
manufacture. We, the subscribers, who know the
value of **FOLEY'S PENS** from constant use of them
for a number of years, cheerfully recommend them
to those who wish for the best and most perfect Gold
Pen ever made.

COMPOSITION BOOKS.

(Copyrighted, June, 1881.)

Something entirely new and attractive for the School Trade. One of the best selling books published. They are printed on our best manila paper, bound in heavy covers with rounded corners. At the head of each page is printed a cut of some simple subject for the children to write about. The name, "**Pretty Stories**," will cause almost every child to want it. The book is recommended by the best primary teachers in the country. **FIRST SERIES**, 6½ × 8 inches, 24 pages, per 100 books, \$8.00. Put up in packages of 25 books each.

We have added to our **Portfolio Tablets** a line of **Fine Linen Paper**, bound in Leatherette, with stamped covers, very handsome; and also are putting up a new style of Tablet in **Fine White Writing Paper**, bound in ornamental flexible covers, with stiff back, which we call our "**TOURISTS' TABLETS**," in Commercial and Packet Note, and Congress Letter Sizes.

STAFFORD'S UNIVERSAL WRITING INK!

A PERFECT BLACK WRITING FLUID.

It contains no gum, and flows very freely, making a smooth, even mark.

It positively will not corrode Steel Pens.

Writes darker than any known ink, and turns at once jet black.

Being a perfect chemical solution, it cannot thicken or deposit a sediment.

Never moulds in any climate. Freezing does not injure it.

Never changes in color or consistency while in use in the inkstand.

Resists Acids. Is more permanent than any other ink.

It will be found more economical than any other ink, as it can be used to the last drop.

One of the most valuable and remarkable features of this Ink is the extreme rapidity with which it dries on the paper, it being seldom necessary to use a blotter. This quality should recommend it to bookkeepers.

In the United States, this Ink has completely superseded the old fashioned pale black inks, and has to a great extent taken the place of the faint green writing fluids.

Mr. J. ADEE HEPWITH, the eminent English Chemist, says:

"I find S. S. Stafford's Universal Ink to be proof against all acids; and, from my knowledge of its ingredients, I believe it to be the most permanent ink in existence, as it cannot rust out like other inks that are prepared from galls and iron. As it seems to be entirely free from any tendency to thicken or corrode steel pens, and is **BLACK AT ONCE**, I cannot but regard its invention as a valuable discovery."

S. S. STAFFORD, Chemist, No. 218 PEARL STREET, NEW YORK.

Trade Gossip.

All new goods and designs which are not, strictly speaking, "Novelties" will be noticed under this head. The trade are requested to forward descriptions with samples in order to secure proper notice.

S. Jewett, bookseller and stationer, Wilmington, N. C., is closing out.

J. A. H. St. Andrews, publisher of the *Mercury*, Farmville, Va., is dead.

W. Brown, bookseller and stationer, Emlenton, Pa., has sold out to E. L. Fleming.

Cutter & Kelly, publishers of the *Tocsin*, Tehama, Cal., have dissolved partnership.

The Mead & Nixon Paper Company, Dayton, Ohio, has sold out to the Mead Paper Company.

The paper mill at Dock Haven, belonging to the Pennsylvania Pulp and Paper Company, has been burned out.

Agnew Welsh, bookseller and stationer, Ada, Ohio, has been burned out. Loss reported at \$3,700; insured for \$1,450.

Greaves & Loveland, dealers in paper hangings, Middletown, Conn., have dissolved partnership. William Greaves continues.

Ames & Stuart, printers, Boston, Mass., have dissolved partnership. J. A. Ames and J. A. Stuart continue under same style.

Siedenbach & Cohen, dealers in fancy goods, Philadelphia, Pa., have dissolved partnership. Abraham Siedenbach will settle all accounts.

Merrill & Culver, booksellers and stationers, Minneapolis, Minn., have dissolved partnership. Geo. N. Culver retires, having sold out to his partner.

S. Washington & Co. and the Worthington Paper Company, Holyoke, Mass., have consolidated under the style of Worthington & Judd Paper Company.

Thieves entered the store of D. D. Comes, on Broadway, some time between Saturday and Monday, and stole gold pens, pencils and penholders to the value of \$1,200.

The Mead & Nixon Paper Company, Dayton, O., has sold its mills and stock on hand to the Mead Paper Company. Claims against the company will be settled on presentation.

S. S. Dutton, of the late firm of Dutton & Withington, wholesale stationers, San Francisco, Cal., and John Partridge have associated in partnership under the style of Dutton & Partridge.

D. E. Mead and W. P. Lewis, Dayton, O., having purchased the assets of the Mead & Nixon Paper Company, will continue the business under the firm style of the Mead Paper Company.

Among the visiting members of the trade to the city during the week were Mr. Schmidt, of C. Speck & Co., St. Louis; A. Menicke, Jr., of Menicke & Co., Milwaukee; Louis Reinach, Chicago; Louis Schott, Chicago; Mr. Knost, of Knost Brothers, Cincinnati, and F. Eltzel, St. Louis.

A translation of "Monsieur, Madame and the Baby," by Gustave Droz, is soon to be published by T. B. Peterson & Brothers, of Philadelphia. It is said to be very popular in France, and is described as a Frenchman's treatment of the theme that forms the numerous basis of "Helen's Babies," and no doubt will have a large sale in this country, as it is spicy and entertaining, with a descriptive illustrated cover by a new artist.

Hildesheimer & Faulkner, London, have instituted a prize card competition, which will be judged by the artists W. P. Frith, J. E. Millais and Marcus Stone. There will be thirty prizes given, ranging in value from \$250 to \$1,000, and in addition to these Hildesheimer & Faulkner guarantee that they will select seventy sets of designs from those in competition, for which they will pay \$100 to \$125 each. The exhibition will open on August 8 and close on August 27. The firm of Hildesheimer & Faulkner is becoming favorably known in this country through the exertions of its agents, Appleton & Co., 294 Broadway, New York. Some of this firm's new designs for this year have been already received by Appleton & Co. They are among the finest in the market. The execution and coloring are excellent, and the designs are graceful and pleasing. The flower designs are particularly noticeable for their fidelity and delicacy. The cards come fringed, and in all of the different styles which are so generally fancied.

J. H. Bufford's Sons have now ready samples of their first series of New Year's calling cards. They include six designs, each of which is very handsome and entirely different in style, and far more attractive than those of last year, although the latter were highly approved of wherever offered. This house has also added to its line of Bristol folders eight new designs, four of which represent the Moorish and the other four the Grecian styles of architecture. The former are 5 by 7 and the latter 4½ by 5½ inches in size. The house has also introduced two new series of cheap chromo cards for advertising purposes, and also a series for the same purpose with likenesses of actresses neatly set in a floral border. Among other cards shown are five new sets of French cards representing respectively Scotch, Japanese, musicians, babies, and robins with babies. This firm claims that its so called French cards are superior to any other shown in this city of domestic manufacture. Several new lines of folding cards are in course of preparation.

J. D. Whitmore & Co. show a line of orders of dancing that are a departure from the usual styles. The designs are all original, and newly produced by some of the best artists in New York. They are bright and attractive, and further interest is added by the arrangement of the different series in sets, several designs in each. Space is left for monograms, &c., only, or for new printed matter, and there are also folds without designs, to be left for the printer's taste wholly. The different series are furnished on a variety of stock in different qualities and assorted tints; also all styles of edges, plain and gold, and plain and gold bevels. The gold bevel panel mounts so popular last season are shown in some of the series, both in those with designs and plain, in cream, white and duplex. The shapes are odd both in the design line and plain folds.

Charles J. Cohen, Philadelphia, has in press a complete price list of school stationery. It is expected to be ready for mailing by the first of August. Any member of the trade not previously on Mr. Cohen's books should make application for a copy of this list, which, it is stated, will be the best arranged and most valuable list of the series issued by the house. It will be known by the number "36."

Matthews & Co., Philadelphia, are preparing their Dickens calendar for 1882. It will be much handsomer than that of this year. The back will be steel engraved. This firm, which is making a great reputation with steel engraved New Year and folding cards, will have this year a selection of twenty-four new designs, which will be ready early in September.

George Palmer, stationer, Yale, B. C., has failed.

Mary Ebeler, dealer in fancy goods, Columbia, Cal., is dead.

Martineau & Gauvin, stationers, &c., Quebec, Can., have failed.

C. P. Davis, printer, Wapakonetta, O., has sold out to T. B. Boher & Co.

A. Weidmann & Co. are now receiving immense shipments from Europe.

A. Hill & Sons, paper manufacturers, Middletown, O., have made an assignment.

J. Keedwell, bookseller, Woodbridge, Ont., Can., has been burned out. Partly insured.

Gain Brothers & Miller, paper bag manufacturers, Hamilton, Ont., Can., are closing up.

Padden & Kinney, publishers of the *Enterprise and Sentinel*, Clyde, O., have dissolved partnership.

James Young, printer and publisher of the *Reformer*, Galt, Ont., Can., has sold out to Collie & McGivern.

Carroll & Wiethauper, paper manufacturers, New Milford, Conn., have dissolved partnership. T. G. Carroll continues.

Chandler Printing House (Joseph C. Ziegler), Philadelphia, Pa., is advertised to be sold out by the sheriff on the 28th inst.

E. L. Walrath, manufacturer of gold pens, Syracuse, N. Y., was burned out on the 19th inst. Loss, \$800; insured for \$200.

Reinhold & Sollenberger, publishers of the *Mahany City*, Pa., *Tribune*, have dissolved partnership. I. Y. Sollenberger continues.

McCarty & Hasberg are now ready for the trade. Their line of novelties is very large, and will be described fully in future issues of THE STATIONER.

G. A. Spooner, Leavenworth, Kansas, is about to open a general book, stationery and art store and asks the trade to send him catalogues, lists, prices and discounts.

Prior & Hilgenberg, Baltimore, have been compelled by the growth of their business to extend their warehouse facilities, and their premises now consist of Nos. 76, 78, 80 and 82 German street and 313 West Baltimore street. They are daily opening large importations of toys, fancy goods and novelties of all kinds.

Owing to the indisposition of Mr. Obpacher, of Obpacher Brothers, who has been ordered by his physician to take a trip to Europe, the firm's representative, Mr. Garre, will be unable to call on the Western trade. The house has therefore authorized the well known firm of Janentzky & Co., of Philadelphia, which has in former seasons so ably represented it, to do the same this season. Janentzky & Co.'s travelers are now on the road with a complete line of Christmas and New Year samples, and will call on the trade generally with them.

T. Sinclair & Son, Philadelphia, are getting up a very handsome line of advertising calendars suitable for all lines of trade. Among them are said to be some of the most elegant chromo lithographic designs ever produced in this country. Among those worthy of special mention is a novelty in the shape of a patent easel desk calendar, about 4 by 6 inches in size, which is a marvel of simplicity and cheapness. The first edition will be ready early in August, when samples will be furnished. This firm is preparing to print calendars on a large scale, and those thinking of getting anything of the kind for the coming year are invited to get estimates and

samples. There is also a handsome special design for stationers.

The stock of John Cone, wholesale dealer in notions, Detroit, Mich., has been attached.

The stock of T. G. Carroll, paper manufacturer, New Milford, Conn., has been attached.

Walter L. Richardson, of the firm of Walter L. Richardson & Co., booksellers, Boston, Mass., is dead.

Max Griebel, of L. Prang & Co., left Hamburg on Monday for this city, per steamship Wieland.

Sachs & Strassburger, wholesale dealers in fancy goods, San Francisco, Cal., have dissolved partnership.

Mr. Kiel, of Kiel Brothers, Fort Wayne, Ind., and W. H. Watson, of Aurora, Ill., were in town during the week.

C. F. Bradley, of Cincinnati, one of the oldest and best known stationers in the West, is at present on a visit to the city with his wife.

The elegant line of of stamped and illuminated papeteries placed before the trade some weeks ago by J. D. Whitmore & Co., are having an immense sale. It is said that nothing more bright, original and quick selling in the way of elegant stationery has been offered.

Samuel Raynor started on Monday night to take a much needed recreation, by making a trip to visit his timber lands in Western New York and his slate and marble quarries in Vermont. He will be gone about ten days.

P. P. McHugh, 51 Ann street, has issued a reduced price list of card stock, to conform to the present low prices of paper. Mr. McHugh claims to give the largest trade discount of any cardboard manufacturer in New York.

Ph. Hake, 155 William street, has just issued a scale price list of printers' cards showing some twenty-five different qualities and upwards, of thirty various sizes. Any color or tint can be found in his stock and, to judge by his price list, he is able to compete with any other concern in his line, quality considered.

Carter, Dinsmore & Co. have just received a good sized order from London for their inks and mucilage. This firm is enjoying a very fair export trade, and has recently made shipments to South America and Japan. Mr. Dinsmore starts on a trip West this week to visit the trade in that section and in the Northwest.

The Robinson Engraving Company, 25 Arch street, Boston, makes a specialty of fine work on steel and copper, and of illuminating, color stamping, &c. Its line of designs is said to be fine and novel, and fully in accord with the most exacting requirements of public taste and artistic execution. Attention is invited to advertisement in another column.

The latest novelty brought out by Charles T. Bainbridge's Sons is in the line of papeteries, which they have christened the "Olivette," in four lithographed designs. These designs represent a boy fishing out of a window and catching a goose; another represents a small boy being pulled out of a window in his attempt to catch a fish several sizes larger than himself; another is a juvenile minstrel serenading his lady love—the music from his guitar is seen floating up to her window in solid chunks; and another represents a boy setting a trap for sparrows and a cat anxiously waiting the boy's luck. This firm is arranging a very complete sample room in which to display its papeteries and other fine goods. It is partitioned off from the rest of the store, and the goods in it will be kept from the dust.

SOMETHING NEW.

THE IMPROVED STYLOGRAPHIC PEN OR FLUID PENCIL.

The only Pen that is as convenient as a lead pencil, and is so simple that it cannot get out of order.

THE STATIONER.

DEVOTED TO THE INTERESTS OF THE

Stationery and Fancy Goods Trades.

WEEKLY---\$2.00 PER ANNUM.

Single Copies - - - - 10 Cents.

NEW YORK, THURSDAY, JULY 28, 1881.

Advertisements cannot be received for insertion in the current week later than 12 m. on Wednesday. The charge for advertising is 25 cents a line, each insertion. Special terms for standing and displayed advertisements to be had on application.

This journal aims to be a medium of information for and a representative of the interests of every one connected with the stationery and fancy goods trades. It contains a full and trustworthy survey of the market for stationery in this country, in all cases giving the actual prices at which goods can be bought of importers and jobbers in this city, together with a detailed account of novelties in the trade, patents relating to stationery, and current items of interest. A review of foreign markets and accounts of movements abroad will also be furnished, and no pains will be spared to make THE STATIONER a thorough and complete exponent of the trade.

Subscription and postage for Great Britain, per annum..... 12s.
Any information our readers may wish to obtain shall be cheerfully given, and prompt replies will be made to all inquiries addressed to us on any subjects of interest to the trade.

Communications on all trade matters are earnestly solicited. Address

HOWARD LOCKWOOD, Pres. and Treas.

Subscribers to THE STATIONER can be supplied with the best cloth binder in the market. Deliverable at the publication office. Price, fifty cents.

Readers of this paper who avail themselves of the information obtained from its columns, by advertisement or otherwise, are requested to notify their correspondents of the source of their information.

THE American Paper Makers' Association met at Saratoga yesterday. We present an abstract of its proceedings. The meeting was well attended.

CINCINNATI's Exposition will open in September. It is an industrial fair which deserves the support of all manufacturers. The stationery and paper trade should be well represented at it.

PAPER makers and stationers should take advantage of every chance for entering into exhibitions, even if not for competition. The International Cotton Exposition will open at Atlanta, Ga., on October 5, continuing until December 31. At the outset this Exhibition was only intended as a fair for illustrating every detail of the cotton industry, but it has grown upon its managers until they have concluded to open their doors to every industry. This enhances the value and importance of the Exhibition, and the opportunity should not be lost sight of by manufacturers. The classification adopted at the Centennial Exhibition will be followed. Agents have been appointed in the principal cities to furnish information and promote the success of the Exhibition.

It is proposed to squarely test the right of States or municipalities to impose a special tax on commercial travelers. The movement to this effect has been started in Boston, and subscriptions are invited for the purpose of going into the matter systematically and securing an adjudication upon every form of special license which it is believed is illegal. We are glad to see that this issue has been taken up, and are only sorry that a city of the commercial importance of New York, with such large interests at stake, has been slothful and neglectful of this duty. Shall it be said that our merchants selfishly refuse to help this endeavor and wait to secure the benefits of the money or labor of other commercial centres? We hope not. Our different boards of trade and commercial organizations should lend their aid by making appropriations to the fund for employing counsel and paying other costs and legal expenses. Cannot the Stationers' Board of Trade make itself felt and help to sustain the fight which is to be made on special taxes?

Now, it appears that the envelope manufacturers fixed up an informal price list at Springfield prior to the Hartford meeting. At least we are told so, and the later occasion was a sort of confirmation ceremony. The advance is reported to be five to ten per cent., according to lines. An extraordinary amount of mystery was attempted, and a pledge was exacted, it seems, that no manufacturer shall tell just what the price list is. This may be inconvenient for the trade. Buyers will have to get figures from all of the manufacturers and then make a bargain. One house informs us that it is not concerned in this movement. This indicates weakness. We really wish that

manufacturers would put a fair price on their goods and hold to it. This would be satisfactory all round. Nobody denies that they are entitled to a decent profit, and consumers can afford to pay accordingly. The stationery trade, however, does not want to be slaughtered, and it is incumbent on the manufacturers to protect them.

ANSWERS TO CORRESPONDENTS.

A. B. M. asks where he can buy a copy of the report of the Commissioner of Agriculture for 1880?

Ans.—We do not know. Perhaps some of the Washington trade can supply you. We have made inquiry in a variety of directions in this city but cannot find a copy.

S. asks: Can you let us know where we can find a printed list of names of stationers and book-sellers—the kind to paste on price lists? They are gummed and perforated.

Ans.—We are informed that what you want can be had of the Business Address Company, 30 Vesey street, New York.

Among other visiting members of the trade in the city during the past week were Robert Gibson, Cincinnati; W. M. Osborn, of E. & W. M. Osborn, Burlington, Iowa; C. F. Bradley, Cincinnati; Robert D. Patterson, of R. D. Patterson & Co., St. Louis, Mo.; Mr. Crew, of Crew Brothers, Leavenworth, Kan.; Mr. Watson, of Aurora, Ill.; Mr. Bristol and Mr. Smith, of Bristol & Smith, Utica, N. Y., and A. A. Andrews, of Holyoke.

Fred. W. Barry, one of the most enterprising stationers of Boston, has sent to his friends in the trade this week a photograph of his well arranged store, at 108 and 110 Washington street, corner of Elm. The building, as shown by the photograph, presents a very handsome front. It is located on one of the principal business thoroughfares of the "Hub." As commodious as the building is, Mr. Barry has been compelled for the want of room to remove his miscellaneous book business to Cornhill. The latter branch he now keeps separate and distinct from the blank book and stationery department.

THE GREAT WHEAT FIELDS.

People traveling to the Northwest will be gratified at learning that the "Great Rock Island Route" opened a new line from Chicago to Minneapolis and St. Paul, July 17, running two through daily trains, leaving Chicago at 12:05 and 9:30 P. M. This new line is to be known as the "Albert Lea Route," and passes through the very best sections of the States of Illinois, Iowa and Minnesota, affording travelers a view of the great harvest fields of our country and a section peopled by the most progressive and prosperous of our Northwestern inhabitants.

Round trip excursion tickets, to points in the great wheat region of the Red River of the North and Missouri River valleys, will be immediately put on sale, good for forty days from date of issue. This will enable Eastern farmers to visit the greatest wheat country on the globe, and see harvesting done on the most gigantic scale.

No one who really desires to see the West will forego this opportunity to do so by ticketing over any other than the "Albert Lea Route," via West Liberty. The Great Rock Island depot is the most central of any in Chicago, being in the very heart of the city, close to the great hotels, post office and leading mercantile houses.

Obpacher Brothers have now ready samples of their fall line of Christmas and New Year's cards. The line includes over 150 series, which comprise fully 1,000 designs. Among the most notable, perhaps, are those numbered 477, 452, 461, 442, 450, 458, 456 and 430. No. 477 includes six designs, each representing a landscape as it appears in the night time. The work on each card is beautifully executed and has the appearance of an engraving. The cards of this series come either plain or with a border which shows tropical birds in all their beautiful plumage, fruit, flowers, &c. No. 452 includes six designs in cabinet size, principally floral in character. This number also contains the same designs in satin. No. 461 is in six designs, in plate shape, illuminated with cupids and gnomes. No. 442 is in three entirely new designs, each representing a book with the cover illuminated with flowers. No. 450 is in six designs, similar to 442. No. 458 is in six comic designs, and represents costumed fowls and animals, which have a very laughable appearance. These come either plain or embossed. No. 456 is also in six designs, in cabinet size, and represents oblique floral crosses. No. 430 is in four designs on a blue ground representing the sky, filled with silver stars, in the midst of which appears an angel, the designs differing mainly according to the position of the halo in each. All of the different designs come fringed, and it is asserted that the quality of the fringe is thicker and better than that used by any other concern in the city. In fringing, special care is taken to have the shades of fringe to suit the tints of the cards, and some of the shades are made specially for the cards they are intended to be used upon. This house also shows twenty fine styles of satin cards mounted on cardboard with gilt edges, and which it is said cannot be told from hand-painted goods.

As one of the results of the recent Exposition at Melbourne, Woolworth & Graham are in receipt of inquiries from Australia for American paper. The same firm is again receiving orders from Peru, the first since before the war with Chili, showing that business has been resumed. Buyers are ordering very cautiously, as becomes merchants of a country in the condition of Peru.

AMERICAN PAPER MAKERS' ASSOCIATION.

The American Paper Makers' Association held its annual meeting at the Grand Union Hotel, Saratoga, yesterday. President Wellington Smith, of Lee, Mass., after calling the meeting to order, spoke of the prosperous condition of the paper trade at this time and the benefits brought about by the tariff, which, he said, "causes a healthy competition among the manufacturers of this country rather than compelling them to compete with the pauper labor of Europe."

Secretary Chapin submitted a report in relation to the circulars sent out by order of the association last year requesting the mills to close at 6 P. M. on Saturdays and begin at 6 A. M. on Mondays, instead of stopping at 11 P. M. on Saturdays and beginning at 1 A. M. Mondays. But few replies had been received and these were uniformly against any change in the working hours.

C. C. Woolworth, from the Committee on Export Business, reported that 307 manufacturers had offered 897 tons for export, without limit as to price. The increase in the export of paper in 1880 over 1879 had been 16,500 tons. Mr. Woolworth recommended government subsidies to the steamship lines.

Warner Miller said that the output of the paper mills during the past year had been fully 20 per cent. over that of the previous year, and paper, he said, is sold in New York as low, quality for quality, as in London. Concerning the tariff, he said that while the average duty on all articles imported is 45 per cent., paper has a protection of only 20 per cent. on ordinary qualities and 35 per cent. on fine. He announced himself as in favor of aiding in the establishment of steamship lines to South America, so that American manufacturers can send their goods there directly, instead of by way of London. He thought it would be as well for the government to pay for prompt and perfect mail lines to foreign parts as for "star routes" in Western territories. In Germany a few years since he found a mill running on a peculiar kind of paper for Brazil. He found on his return that he could make that paper cheaper than the Germans could, but he could not put it down in Brazil as cheaply as the Germans did, solely because the only steamship lines to Brazil are from Europe. He believed that American manufacturers should be given facilities to secure the trade of this continent, and he would do what he could to secure that end.

Secretary Chapin reported on the recent decision of the Postmaster General construing the law of 1879 so as to make samples with "marks for identification" pay first class rates instead of fourth class. Mr. Miller said he had no doubt that the decision of Postmaster General Key was too liberal in construing the law of 1879, and that the government had suffered great loss through it.

The Committee on Nominations reported the following list of officers, who were elected: President, Wellington Smith, of Lee, Mass.; vice-presidents, O. H. Greenleaf, Springfield, Mass., and W. H. Chatfield, Cincinnati; secretary, Charles O. Chapin, Springfield, Mass.; treasurer, George W. Wheelwright, Boston. The following committees were appointed: Boston Division—George L. Wright, Mittineaque, Mass.; George E. Marshall, Turner Falls, Mass., and E. C. Taft, Holyoke, Mass. New York Division—W. P. Sheffield, New York city; George West, Ballston, N. Y., and H. Allen, Sandy Hill, N. Y.

Philadelphia Division—Charles Hamilton and W. H. Nixon, Philadelphia; J. A. Deshon, Baltimore. Cincinnati Division—A. E. Harding, Middletown, Ohio; N. W. Taylor, Cleveland; Cyrus Bremaker, Louisville. Chicago Division—George French, Three Rivers, Mich.; John T. Averill, St. Paul, Minn.; O. M. Butler, Chicago.

Enjoy the blessings of this day and the evils bear patiently and sweetly. For this day is ours; we are dead to yesterday, and we are not born to-morrow.

Market Review.

OFFICE OF THE AMERICAN STATIONER,
WEDNESDAY, July 27, 1881.

THE MONEY MARKET.—Money continues easy at 2@3½ per cent. on call, and 3½@5 per cent. discount of prime mercantile paper. The national finances are in exceptionally good shape. That part of our financial system which consists in providing for an early payment of the public debt is peculiar to this country. The tendency, in most nations, is to increase public debt, without making provision for payment, early or late. This difference tells immensely in our favor. The stock market declined heavily on Saturday, since when it has been in a more or less feverish condition, the free use which the "bears" are making of the deficiency of the wheat harvest and the railroad war being among the depressing influences, which the "bulls" find it most difficult to overcome. Government bonds are a trifle lower as are also railway bonds. Foreign exchange continues dull, with a further decline in rates and barely steady at the close. The posted rates for prime bankers' sterling are \$4.83¼ and \$4.85¼; the actual rates are \$4.82¼@4.83 and \$4.84¼@4.85. Cables are \$4.85@4.85¼, and prime commercial bills \$4.81@4.81¼. The actual rates for Continental exchange are as follows: France, 5.23¼ and 5.20@5.199; marks, 94¼@94¼ and 94½@94¼, and guilders 40 and 40¼@40¼.

THE PAPER MARKET.—There is an unusually good summer trade doing, the best that has been experienced for several years, and what is still more remarkable in this connection is the fact that prices, with one or two exceptions, have a fair support, notwithstanding the large production throughout the country. From present indications manufacturers will likely be hindered from running to their full capacity by the drought, as already some located on the small streams are beginning to complain very much. We have heard of some very large orders having been given recently for fine papers to be made up and delivered next month and, as far as we can learn, at satisfactory prices to the manufacturers. The business in straw boards is about starting up—some of the large dealers reporting business as fairly good. There is no great activity in straw wrapping. Taking a review of the prices of super-sized and super-calendered book paper and ordinary news for the past fourteen years, the average for this year is very nearly as low as in 1870, when the lowest quotations of any year since 1868 were made.

THE STATIONERY MARKET.—Business continues to gradually improve, but no very great activity is looked for until after the beginning of August. There are daily arrivals of out of town buyers, who seem to be doing a considerable looking around for goods, but it is noticeable that they are not as yet purchasing to any large extent. A number of them are taking advantage of the opportunity presented to combine pleasure with business by visiting Coney Island, Saratoga and other summer resorts, attending to the principal object of their visit, the purchase of stocks of goods, afterwards. There is the best of feeling both among buyers and sellers on the prospects for fall trade, all expressing themselves in the most encouraging manner. The only change we hear talked of is in connection with the envelope trade, who claim that they have been compelled to make an advance of from five to ten per cent. to meet the higher prices asked for some grades of envelope paper.

LOEB & BRO.,

604 Broadway, New York City,

Manufacturers of Fine Leather Goods.

CEMENTINE.

WE desire to call attention to a new article which we are just now introducing to the trade. It is a liquid glue, cement and mucilage combined. In our own business we experienced so much difficulty in finding an adhesive that would make our labels adhere to the tin cover of the Hektograph, that we gave a commission to one of our most distinguished chemists to compound for us an article which would answer our purpose. After months of labor the result has been the production of an adhesive so far superior to anything heretofore made, that we have decided to manufacture and offer it for sale, and are now ready to supply it in any quantity. It is without doubt the best article of the kind for family and general use ever offered to the public. For repairing China, Glassware, Furniture, Rubber, Leather, Books, Billiard Cues, or pasting labels upon tin or other metal or for any use where glue, cement or mucilage is required, it is unrivaled. For warm climates we make an article expressly adapted for use there. We supply it by the gallon or barrel, and for family use it is put up in bottles, with brush, at 25 cents. Samples will be sent free to large consumers.

LIBERAL DISCOUNT TO THE TRADE.

THE PAPER TRADE IN THE CITY OF NEW YORK.

[Continued.]

In the year 1848 Bradley R. Hard, then twenty-four years of age and clerk in a store at Albany, N. Y., in response to an invitation from Carson & Hard (who had established themselves in business the previous year at No. 281 Pearl street), came to the city of New York and entered their employ. Applying himself closely to his business, he soon became a valued employee and, in the year 1853, was admitted to a partnership in the firm. At about this period the business was removed from Pearl street to the new building, No. 44 Beekman street. Early in the year 1857, owing to some business disagreement between Mr. Hard and his senior partners, he withdrew from the firm of Carson & Hard and formed a new firm with Braman & O'Connor, who had been engaged in business for several years, in Burling Slip, in the coarse paper trade. The style of the new firm was Braman, O'Connor & Hard. They at once took the building, No. 47 Beekman street, at that time occupied by Wm. A. Wheeler as a paper warehouse, Mr. Wheeler retiring therefrom to reëngage in his former business, the stationery trade. Mr. Hard immediately added to the stock of the new firm a large assortment of fine papers, and materially increased the business. At the close of the year 1860 he retired from the firm of Braman, O'Connor & Hard, and taking the store, No. 34 Beekman street, started for himself. As 1861 was the year of the breaking out of the war, business for a time was in a most discouraging state. Starting, however, in a moderate way keeping his expenses, both business and private, at a minimum, and with the friendship and encouragement of customers and manufacturers his success even under the trying circumstances of the times was assured. In the fall of the same year business revived, and in the spring of the ensuing year, 1862, his brother-in-law, John F. Anderson, Jr., then twenty-two years of age, who was then and had been for about four years previously, working for J. Q. Preble & Co., entered his employ, and on January 12, 1864, was admitted as partner, the firm name being changed to Bradley R. Hard & Co. This firm continued in business successfully until August 1, 1872. Mr. Hard's health had been gradually failing for a year or more previously, but a severe attack of pneumonia in the month of February, 1872, resulted in a lingering illness, terminating his life on August 2, at the age of forty-eight years. He died deeply regretted by all who knew him. He was a man of untiring industry, and the strictest integrity.

Mr. Anderson subsequently formed the firm of J. F. Anderson, Jr., & Co. with William E. Conrow, who had been bookkeeper for the firm for nearly nine years previously, and Mrs. Hard (the widow of Bradley R. Hard), the latter as special partner. The new firm, by close application to business and observance of the same methods as characterized the business dealings of the previous firms, was successful. The limited copartnership with Mrs. Hard as special expired on January 1, 1876 and was not renewed, Mrs. Hard having retired. On January 1, 1879, Frank W. Anderson, brother of the senior partner and who had been in the employ of the house from the time of its foundation by Mr. Hard, entered the firm. The firm has built up a large business, which is still steadily growing. Its members are very conservative and are esteemed as men of integrity and capacity. The senior partner has had the advantage of a thorough business training. He entered a mercantile

house at the early age of twelve years and there obtained during six years a first-class business education, but in a line remote from that in which he now follows. The experience there received was of great service to him in his subsequent career. The firm has always made a specialty of flat writing papers. During the past year it has added book papers to its stock, and has been quite successful with them. It is sole agent in this city for the writing and bank note papers of Crane Brothers, Westfield, Mass., and one of the agents also for Byron Weston, of Dalton, Mass.; the L. L. Brown Paper Company, of South Adams; Crane & Co., of Pittsfield, and the Platner & Porter Manufacturing Company, of Unionville, Conn.

(To be Continued.)

The factory of the Elsey School Furniture Company, which is making the Triumph blackboards for the American Slate and Crayon Company, is at present compelled to work night and day to keep up with the orders it is receiving. This article seems to have become quite a favorite with the trade, and is said to combine every quality requisite for a perfect blackboard. The schools are calling for them and children are teasing their parents for them for use in the household.

TWELFTH YEAR OF PUBLICATION.

THE PRINTING TIMES AND LITHOGRAPHER,

An Illustrated Technical and Fine-Art Journal of
Typography, Lithography, Paper-Making,
and the Auxiliary Trades.

THE NEW SERIES COMMENCED JANUARY, 1875.

THE PRINTING TIMES AND LITHOGRAPHER is a high class journal, devoted to the Printing and Graphic Arts, in all their various forms. It derives its information from, and circulates in, all parts of the world. No pains are spared to insure the accuracy of its intelligence and to render it in every respect worthy of the support of Letterpress Printers and Lithographers, as well as Artists, Antiquaries, and Literary Men generally.

Published on the 15th of each month, 4to, in wrapper, price 6d. Annual subscription (payable in advance), 8s., post free to the United States. Rates of Subscriptions for foreign countries on application. Post-office orders to be made payable at the West Central District Post Office, High Holborn, to WYMAN & SONS, 74 and 75 Great Queen Street, London, W. C., England.

Headquarters FOR Steel Pens.

M. L. LEMANS,

(Established 1850.)

116 William Street, New York.

An extra cheap lot of other imprints now on hand.

CANCELING POSTAGE STAMPS.

The newspapers now announce that an Eastern inventor, employed by the Post Office Department, has produced a machine which, worked by hand, will easily cancel four hundred stamps a minute, but if worked by power can cancel at least one thousand a minute. The mechanism is so managed that the various pieces of mail matter are surely separated from each other, and the postal card as well as the letter is certain to come under the eraser.

The rapid increase of mail matter, and the fact that in our largest cities, where important mails close in the day time, there are thousands of pieces deposited in the Post Office just before the hour of closing, renders such a machine a very important one. The most experienced man canceling by hand has a difficult task in such an emergency, and the physical results of the severe strain oftentimes prove injurious.

W. Bartleet Langbridge, Auckland, New Zealand, invites the attention of American manufacturers and exporters to the fact that he makes a specialty of the introduction of novelties in fancy goods and stationers' sundries. He will be glad to receive catalogues, and the trade are asked to note his advertisement which appears in *THE STATIONER*.

Russia leather is made from the hide of two or three year old calves. The tanning material employed is willow bark, used either in vats or in the form of extract. The operation lasts five or six weeks. When this is completed the leather is well rubbed on the flesh side with birch oil and oil from sea calves, to which it owes its peculiar odor, and then it is passed through rollers that impress upon it a peculiar figure and roughness.

The jobbing line of leather goods shown by Jas. D. Whitmore & Co. this season should receive close attention from the trade. Their line of workboxes in leather and plush are leading styles this year. They show a line of cheap desks which are meeting with favor everywhere. In combination boxes their styles are thought to be unrivaled. Many of the patterns are not to be obtained elsewhere. The advance this house has made in the character of these goods is to be highly commended.

"The Exiles" is a Russian love story of great power and originality. The scene is laid in Siberia, just now a point of unusual interest because of the hosts of Nihilists who will undoubtedly be sent into exile there by the new Czar. The leading characters are Yegor Semenov, a political convict; Nadege Davidoff, his betrothed; Ladislav, a Polish boy; M. Lafleur, a liberty-loving French dancing master; and Yermac, chief of police of Yakoutsk. Yegor, Nadege and Ladislav, aided by M. Lafleur, undertake to escape across Siberia. They are followed by Yermac, but reach the polar regions, meeting with all kinds of exciting and perilous adventures. These points give but a slight idea of this interesting story; to fully appreciate it, it must be read. Its authors are Victor Tissot and Constant Amoro, two well known French novelists. The work of translation has been done by George D. Cox in his usual style of excellence, and the great romance is given to the American public in all its attractiveness. It is published in a large square duodecimo volume, paper cover, price 75 cents, in uniform style with Peterson's editions of Emile Zola's and Henry Greville's works, by T. B. Peterson & Brothers, Philadelphia, Pa.

WM. H. WOGLOM, Mfr., 239 Greenwich St., N. Y.**PRINTING INK.**

A few years ago the preparation of printing ink was considered a part of the printer's trade; now there are very few printers who have more than a remote idea as to the composition or preparation of the inks they use.

The manufacture of such inks has of late years developed into a distinct industry, employing hundreds of thousands of dollars' capital, and turning out hundreds of tons of ink annually.

The basis of all ordinary printing inks, from the cheap poster and news to the finer lithographic and plate inks, is a varnish prepared from oils, chiefly linseed, although nut oil is sometimes used, and resin oil frequently introduced in the cheaper grades.

When linseed oil is used, this varnish is practically anhydride of linoleic acid, the fatty constituents of the oil—glycerine, palmitine, &c.—having been volatilized by heat. For the better class of inks old oil is preferred. It is usually purified by heating it for several hours, by injected steam or otherwise, with oil of vitriol (sulphuric acid) diluted with about three times its weight of water. The acid solution having been drawn off, the oil is washed by agitation with boiling water and, after standing to allow the latter to separate, is run off into storing vessels. From these the oil is transferred to iron caldrons provided with stirring apparatus and covers. A moderate fire in a small furnace beneath gradually heats the oil, which only half fills the vessel (to prevent accident by foaming) and the stirring apparatus is set in motion. The moisture in the oil is gradually dissipated, and as the temperature approaches 570° Fahr. an inflammable vapor or smoke begins to escape from the boiling oil; a scrap of burning paper secured in the cleft of a long stick is then thrust into the smoke, which is thereby ignited. The fire below is drawn and smothered; the oil, or rather the gases given off by the oil, are allowed to blaze, the combustion being kept within bounds by partly covering the pot if necessary. Samples of the oil are taken out from time to time and tested by cooling a few drops on a plate of glass or tile. When the drops thus chilled glaze over quickly and draw out into strings of about half an inch between the fingers, the flame is extinguished by putting the cover tightly over the pot. The oil is then again heated over a moderate fire to the boiling point, and the heat and stirring kept up for several hours, small quantities of drier being introduced by some manufacturers.

Varnishes of several degrees of thickness—from greater or less boiling—are prepared in this way to satisfy the requirements of the different kinds or grades of ink and to modify their consistence to suit the climate where used, thinner ink being required in cold than in warm climates.

For black letter-press ink the color and character are usually imparted to the varnish by the incorporation with it of lampblack or carbon black, Prussian blue, indigo, resin and soap. The proportion of these varies according to the purpose for which the ink was intended. The following will serve as an illustration of the composition of a good letter-press ink: Varnish (prepared as above), 1 gallon; resin, 4 pounds; brown resin soap, 1 1/2 pounds; purified lampblack, 5 pounds; Prussian blue and indigo, each, 1 1/2 ounces.

In compounding the ink the resin is finely powdered and gradually stirred into the varnish, made hot enough to melt and dissolve it. The soap, previously cut into thin slices, dried, and rubbed into fine crumbs, is next introduced, a

very little at a time, as the moisture it still retains is apt to occasion a violent commotion as it is driven out by contact with the hot varnish. The addition of soap to printing ink increases the sharpness of the print and tends to prevent smearing or clouding of the work. The mixture, after cooling somewhat, is poured over the lampblack, and finely powdered blue pigments placed in the bottom of a suitable vessel, and the whole is well stirred together and then ground in a paint mill until reduced to a very fine, smooth and uniform paste.

The quality of such inks depends largely upon the thoroughness with which the pigments are incorporated with the paste by grinding.

Lithographic inks are simply very fine printing inks made somewhat more fluid than required for letter-press or cut work. The ink used for engraved or plate work is usually a heavy printing ink made with ivory black, or ivory and carbon blacks, instead of lampblack.

Colored printing inks are made from fine, clear linseed oil, boiled into a varnish as above described, and appropriate pigments. The pigments used are carmine, lakes, vermilion, red lead, Indian and Venetian reds, chrome yellow, chrome orange or red sienna, gallstone, Roman and yellow ochres, verdigris, indigo, Prussian blue, Antwerp blue, ultramarine, lustre, umber, sepia and various mixtures of these.

A very fine printing ink may be prepared without burning, and the risks attending boiling oil may be avoided by using the following receipt: Balsam of capivi, 9 ounces; resin soap, dry, 3 ounces; lampblack, purified, 3 ounces; Prussian blue, $1\frac{1}{4}$ ounces; Indian red, $\frac{1}{4}$ ounce; creosote, 3 drops. Grind all together, on a stone slab, with a muller, to a very smooth and uniform paste. Any of the colors above enumerated may be substituted for the lampblack and other pigments in the above formula to produce colored inks.

In Germany an ink, prepared as follows, has been used, and is said to yield a very clear and fine impression when properly prepared: Venice turpentine, $2\frac{1}{4}$ ounces; soap, in thick paste, $2\frac{1}{2}$ ounces; olein, rectified, 1 ounce; carbon black, $1\frac{1}{4}$ ounces; Paris blue, $\frac{1}{4}$ ounce; oxalic acid, $\frac{1}{2}$ ounce; water, $\frac{1}{4}$ ounce.

The three last ingredients are mixed into a paste. The turpentine and olein are mixed at a gentle heat, the soap and carbon then introduced, and, after cooling, the blue paste is added, the whole being ground beneath a muller to a very fine and smooth paste.

The following are patented inks: Colophonic tar, 14 pounds; lampblack, 3 pounds; indigo, 8 ounces; Indian red, 4 ounces; yellow resin soap, 1 pound.

The colophonic tar referred to is the residuum from the distillation of rosin for rosin oil.

Linseed oil, 40 gallons; litharge, 4 pounds; lead acetate, 2 pounds.

The oil is heated to about 600° Fahr. for from forty-eight to sixty-five hours, according to quality of varnish required, the lead salts being added as driers. To each gallon of this varnish, 4 pounds of gum copal is added and dissolved. For common news ink the proportions are as follows: Of the above varnish, 15 pounds; rosin, 10 pounds; soap, brown resin, 2 pounds; lampblack, $5\frac{1}{2}$ pounds.

A fine ink, suitable for use with rubber type, is prepared from nigrosine, soluble, 1 ounce; glycerine, pure, $4\frac{1}{2}$ ounces; soap, white curd, $\frac{1}{4}$ ounce; water, $q. s.$

The nigrosine, finely powdered, is mixed into stiff paste with the water, hot, and after standing a few hours this is mixed with the glycerine and soap, and the paste rubbed down with a muller on a hot stone slab.

For colored inks of this description the nigrosine may be substituted by almost any of the soluble coal tar dyes.

SOLE AGENTS FOR THE UNITED STATES OF

Aug. Leonhardi's (Dresden) Celebrated Alizarine Writing
and Copying Ink.

THIS Ink combines the qualities of a Writing and Copying Ink in a manner unsur-
passed by any other make in the market. As a Copying Ink it will make a dis-
tinct copy even several days after, and if required two clear copies can be taken. As
a Writing Ink it excels for its intense blackness. It never fades, nor does it blur. It
is used in all Government Offices on the Continent of Europe.

We are enabled to quote this Ink far below the prices of other Copying Inks.

Publishers of **SOUVENIR ALBUMS**, of all the large cities of the Union, of
Places of Summer Resort, and of Celebrated Sceneries.

GRAND PRIZE GOLD MEDAL

AND RECOMMENDED THE

Medal of Honor and Perfection

At PARIS, 1878,

This being the HIGHEST and ONLY AWARD given for

LINEN RECORD & LEDGER PAPER.

—A SPECIALTY.—

THIS Paper has received THE HIGHEST PREMIUM over all others from the Cincinnati Industrial Exhibition, Massachusetts Charitable Mechanics' Association, Franklin Institute of Philadelphia, Louisville Exposition, Medal and diploma from United States Centennial Commission, Medal of Progress American Institute, 1877, and Medal of Improvement and Progress, Boston, 1878. Its

PRINCIPAL ADVANTAGES

are as follows:—1. It contains more LINEN than any other Ledger Paper, has a longer fibre, and is, consequently, tougher. 2. Having a harder and better body, it frays less in erasure, so that by simply using the rubber after the eraser, the ink is prevented from spreading. 3. It is more uniform in Weight Color and Finish. 4. It never cockles if properly bound. 5. Its chemical action upon ink is such that it both writes and rules up better. For proof of the foregoing, refer to a large number of Stationers, Bookbinders, Bookkeepers, and Recorders, who have given it, after a severe test, the preference over all others. This paper is Double Sized, and will stand any climate or the most acid of fluid inks.

Each sheet is water-marked with name and date.

LOCKWOOD PRESS, 74 Duane Street, New York.

sheet, ERASE and REWRITE FOUR TIMES on same spot.

The American Stationer

A JOURNAL DEVOTED TO THE INTERESTS OF THE STATIONERY & FANCY GOODS TRADES

"The Stationer"—Every Thursday—\$2.00 Per Annum.

VOL. X.—NO. 5.

NEW YORK, AUGUST 4, 1881.

WHOLE NO. 319.

Correspondence.

BOSTON NOTES.

[FROM OUR REGULAR CORRESPONDENT.]

Boston, Mass., August 1, 1881.

Trade among the stationers begins to show signs of picking up, it being upon the edge of the fall campaign. An excellent feeling respecting the near future also prevails all around. The importers, the wholesalers, the jobbers and the manufacturers all share in this feeling.

The manufacturers of art novelties anticipate an unusually active season, and they have been preparing for it for months. Already L. Prang & Co. have made their annual early announcement of Christmas and New Year cards, and their agents are now soliciting orders. First come, first served, will be the rule in the way of filling orders. The American character of the designs of the cards of L. Prang & Co. renders them preferable to all others made in Europe, and the efforts they have made to secure the highest excellence is attested by many of the most acknowledged artists in the country. And not only the designs, but the literary matter accompanying them, has received special attention and has been provided for by several of the best known poets in this specialty in the country.

The prize Christmas cards of L. Prang & Co. will have an immense sale. They are elegantly mounted; while their regular line of Christmas cards, scripture text cards, panels, water colors, &c., will receive a due share of the attention of the trade.

Among the novelties in trade, the leatherette, a perfect imitation of leather on paper, furnished by the Shawmut Manufacturing Company, 45 High street, is having a good sale. The main concern has branches at New York, Philadelphia, Cincinnati, Chicago, Toronto and even San Francisco, where its leatherette can be obtained. The article comes in rolls thirty inches wide, imitating all colors and grains.

The "Economy" letter and bill file, one of the cheapest and simplest and at the same time one of the most economical and durable articles of its kind, is having a good sale, and it appears to be just the thing wanted. It is furnished by Lucien Sanderson & Co., 103 Devonshire street. This concern also has the government fountain pen for sale; and it is a very superior pen in its way.

John A. Cummings, Washington street, near State street, is a printer of fine stationery, and has a wide reputation among the Masonic and other secret societies, he doing work for them—and much of it of a complicated and delicate

character—all the year around. Mr. Cummings has also risen to the dignity of Mayor of Somerville.

Merchants from the interior have been in town in considerable numbers looking over the field with an eye to future purchases. When they begin to stock up with goods they will patronize the stationers quite liberally.

A run among the dealers finds them doing more or less business. The practice of the large dry goods stores in dealing in stationers' goods is growing more and more common; but the astonishingly low prices at which it is sold in most cases is what puzzles some people, especially dealers in the business who keep good goods and sell them at a reasonable profit. It is, however, for the most part, "cheap trash" that is sold outside of the regular trade.

Samuel Hobbs & Co., late with L. W. Lawrence, Adams & Co., have succeeded to the business at 169 Devonshire street and 30 and 32 Arch street. This firm of young men has an excellent stock, and is getting its share of the trade, and starts off in August with a goodly number of orders. F. C. Philbrick, late of the firm of F. C. Philbrick & Co., has recently associated himself with Hobbs & Co., and will give his entire attendance to all kinds of account books, lithographing and printing, and also special attention to outfits for mining companies.

Boston has had a week of fog, but has not experienced much "fun" in it. With genial sunshine things will be less sticky.

The retailers report a good trade. The numerous excursion parties from the country en route to the beaches help the stationers in more ways than one.

The printers report an excellent business for the season.

Our dealers are awaiting the usual raid of traveling salesmen just before the fall trade sets in earnestly. L.

CHICAGO NOTES.

[FROM OUR REGULAR CORRESPONDENT.]

WESTERN OFFICE LOCKWOOD PRESS.
8 LAKESIDE BUILDING, CHICAGO, ILL., July 30, 1881.

The season of pleasant evenings has returned and with them have come the affable tribe of drummers from the four quarters of the earth. So, from the looks of things at home and the reports of the sojourners among us, this fall will be probably a lively one. This, indeed, might have been inferred from the ponderous proportions of THE STATIONER of last week, and from the extensive announcements therein; and these hints are verified by tradereports.

Many of the summer tourists are back, and others are expected daily. Among the recent

arrivals are my friends Taylor & Kimball, who return with strength and color renewed for the coming season. Taylor still has a longing for the "fleshpots" of Providence, but another week like the present—the busiest since the agency has been established—will cure him of that. His only trouble in that case will be to get the Livermore pens fast enough. Mr. Kimball brings with him samples of stationery novelties that will make the trade hum this fall, and of which I shall have more to say later.

Brown, Pettibone & Kelly, with commendable energy, are still "widening their borders." Their last move is the purchase of the exclusive right to manufacture and sell Grave's commercial order files and order blanks, a very useful invention, which if "the boys" want to save time and have their orders promptly filled they should examine and recommend to their respective houses. These convenient blanks are already commanding a fine sale, and they need no other recommendation than the fact that they are being exclusively used by such houses as the Meriden Cutlery Company, Meriden, Conn., and the Biddle Hardware Company, of Philadelphia, and by almost all of the hardware houses of the West. They are particularly useful in the case of long orders, as with the hardware, grocery, and wooden ware trades, saving the labor of re-copying orders.

John J. McGrath is going to show the trade next month a line of wall paper that "will make them weep for joy."

Farwell, Bradley & Co.'s inks and mucilages have been long known to banks and railroads, who have bought them for years by the barrel; but now the firm intends pushing them before the trade. Here is a chance for stationers to secure a good thing new to the retail trade, and it is an opportunity not to be slighted. They are manufactured at 45 Eldridge Court.

Wells B. Sizer has bought out W. W. Miller, the cheap book man. He will continue the business at the old stand, 152 Dearborn street.

A. J. Spalding & Brother report a large increase in this year's business over that of last year. They will soon have a lot of fall novelties ready for the inspection of the trade. I shall have occasion to mention them probably in my next.

Before it has been fairly offered to the trade, Farnham's arm rest is already receiving attention. I believe the only public mention yet made of this useful device was that in my last letter, yet he is already receiving inquiries regarding it. This is as it should be, for it shows that THE STATIONER reaches the eyes for which it is intended. I may now add that the arm rest will soon be ready for general sale, and stationers

cannot do better than to satisfy themselves as to its merits by addressing the inventor, E. W. Farnham, room 6, American Express Building, Chicago. G. B. H.

CINCINNATI NOTES.

[FROM OUR REGULAR CORRESPONDENT.]

CINCINNATI, O., August 1, 1881.

Wm. L. Mark, of the Dixon Pencil Company, Jersey City, remarked to-day that he had been in the granger country, west of the Father of Waters, in Iowa, Kansas and Nebraska, and had traversed the country intervening between Cincinnati and the trans-Mississippi West, and had marked the situation well, "and," added he, "you may say that it shows a better prospect for trade in the stationery line than has been experienced for years." He said for five years, but five wouldn't fit well in the sentence, so I tell that off to itself. "How are stocks?" I asked, meaning stocks of stationery goods. "Low," said he.

That sufficed, and I turned to W. B. Carpenter forthwith and demanded that he should drop his customers, a swarm of whom were buzzing him, and give me a catalogue of the commercial visitors who have recently invested this place (don't print it infested), seeking to induce dealers to buy their wares. He stood not upon the order. He never does. He has been too well drilled. Here's a list: Charles Small, representing B. Lawrence & Co., New York; Wm. L. Mark, Dixon Pencil Company, Jersey City; Frank Coffin, representing the J. G. Shaw Blank Book Company, New York; Mr. Phillips, representing B. Illfelder & Co., New York; Mr. Lipman, of Boorum & Pease, who remained here several days and inspected the suburbs with Carpenter. Now, if there is a name misspelled charge it to Carpenter.

I have Billy O'Neil's testimony that trade visitors have not been very abundant. It is not quite time for them yet. Their time is after the latter rain. This is the critical period in Ohio for the making of corn—the final crisis. It needs rain during the first half of August to give it vigor for its last effort to develop into the full ear. The season has been unusually dry.

All dealers and manufacturers in this city report the straws showing that the wind blows fair for a prosperous fall trade. They are unanimous in this testimony; and the growl has not been eradicated from their human nature, so you may know for certain that the promise is very flattering.

Stewart is doing a booming business, but for special reasons I'm afraid to go near him for a while.

Chatfield & Woods find matters brisk, and are exceedingly sanguine and hopeful.

Pounford is pounding away at his business, and making it tell.

C. F. Bradley has all of his presses rattling off work.

C. T. Woodrow's name is found on some fine printing work.

Russell, Morgan & Co. have not put any playing cards on the market yet, but they have all the appliances in place for turning off every variety of that article. They have secured the services of Victor E. Mauger to manage the putting of the article in the market, and those who know do know what that means.

John Holland has in the market now twelve sizes of barrel pens, the largest of which weighs four pennyweights. There is a rage for that article just now. John Holland is at this date rustivating at Cape May.

The publishing business—book publishing I

mean—is looking up in Cincinnati. Robert Clarke & Co. have just published the "Proceedings of the Society of the Army of the Cumberland" at their twelfth reunion at Toledo, Ohio. It is 8vo., and has fine steel portrait of General Jeff. C. Davis. The same firm has issued "How to Take Care of Babies," the "Physiological Arrangement of the Cranial Nerves," by Edward Rives, M. D.; the second edition of Professor J. W. Lloyd's "Chemistry of Medicines;" "Abbott's Primitive Industry," an archaeological work; Rushton M. Dorman's "Primitive Superstitions;" Dr. James A. Henshall's "Book of the Black Bass," an angler's vade mecum, "Housekeeping in the Blue Grass," a book by a Kentucky woman; an Ohio law book, by Clement Bates, of Cincinnati, attorney at law; "The Doctor's Puzzle," a novel, by an ex lady teacher in one of the city high schools; "Prose Miscellanies," by Horace P. Biddle, of the Supreme Court of Indiana. In September Clarke & Co. will publish "Miami Woods, a Golden Wedding, and other poems," by William D. Gallagher, of Louisville, Ky.; "Thomas Corwin: a Sketch," by A. P. Russell, author of "Library Notes;" "The Discovery of the Northwest in 1634 by John Nicolet, with a sketch of his life," by C. W. Butterfield; "The Shakespearean Myth; or, William Shakespeare and Circumstantial Evidence," by Appleton Morgan. In December they will publish the "Correspondence of General Arthur St. Clair," of which I have already spoken in this correspondence. This is only one batch of books published here. The business is growing. You know we have here the greatest school book publishing house in the nation. The job and book printing in the higher grades of work is keeping abreast of the age. The trans-Appalachians must look to their laurels. PRINCE WILLIAM.

TORONTO NOTES.

[FROM OUR OWN CORRESPONDENT.]

TORONTO, Ont., July 29, 1881.

In a former letter I mentioned the formation of a company for the manufacture of fine paper in this province. The promoters have had several meetings, and have visited a number of places, but have not yet decided where they will locate. Several localities are bidding for it, and it looks a good deal just now as though the managing directors were more anxious to get a good bonus from some municipality than the most suitable place for the manufacture of the better class of paper. The company is abundantly able, and the first consideration should be suitability of the site for the purpose desired. It would be a pity after all the trouble if the matter of a few thousand dollars should gravitate the new mill to the wrong place. A meeting was held at the Rossin House here on Wednesday, at which parties from different places laid their claims before the promoters, and it was decided that the directors, accompanied by an expert from Holyoke, Mass., should proceed to inspect the several places most favorably thought of.

N. Ure, late of Dawson Brothers, of Montreal, has bought the business of Hart & Rawlinson at fifty cents on the dollar, and is now in possession. Mr. Ure's long connection with the Montreal firm, one of the oldest and best known establishments in the Dominion, is a guaranty of his competency, and it is to be hoped that his venture will prove eminently successful.

S. Hart, of the late firm of Hart & Rawlinson, will open in a short time in the same line, a few doors west of the old premises, under the

title of Hart & Co. Mr. Hart goes to New York in a day or two.

Mr. Rawlinson, late of the above named firm, has bought Chandler's business, of St. Thomas, and expects to be in possession in a few days. Mr. Chandler, I am told, goes to Montreal.

Mr. Ellis, of Barber & Ellis, has recently returned from Europe, and is highly gratified with his trip. He says they can do better with English than American papers.

Woolworth & Graham have announced that they are certain of getting the contract from our government for the manufacture of some millions of postal cards, and are to be congratulated; but it is not the first time chickens have been counted on before they were hatched.

Robert Marshall says his summer trade has been considerably above the average. He is selling a better class of goods and getting better prices, and anticipates a first-rate fall business.

Buntin, Brother & Co. report business as first rate, and they anticipate a large fall trade.

I noticed in some of our news dealers' windows lately the life of Guiteau. "Some are born great; some achieve greatness," &c., and other some are born with an inward "cussedness" which develops in some horrible act like the recent one in Washington. But why the life of such a wretch should find either a biographer or a reader is marvelous, and does not say much for modern advancement. Byron said he awoke one morning and found himself famous. Here is a man of the worst type who, by a couple of pistol shots, has his name carried to the ends of the earth in a few hours. If he sought notoriety he has won it, and its finis should be a few yards of rope and a drop. There have been men in all the ages who have turned to "ways that are dark" to be heard from; but when the craze takes a murderous shape, it should merit a murderer's fate, and oblivion in Hades or some other sphere suited to spirits of this stamp. Your President has the sympathy of our people, and many a fervent prayer is offered daily for his speedy recovery.

The pulp mill mentioned some time ago as being erected at Campbellford, Ont., by Mr. Keeler, is completed, and manufacturing operations have been commenced.

The weather has been much pleasanter for a few days past, with frequent showers. A great many of our citizens are out of town, very many of whom are rustivating in Muskoka, the attractions of which as a summer resort are becoming more and more popular. C. H.

IMITATION GROUND GLASS THAT STEAM WILL NOT DESTROY.—Put a piece of putty in muslin, twist the fabric tight, and tie it into the shape of a pad; well clean the glass first, and then putty it all over. The putty will exude sufficiently through the muslin to render the stain opaque. Let it dry hard, and then varnish. If a pattern is required, cut it out in paper as a stencil; place it so as not to slip, and proceed as above, removing the stencil when finished. If there should be any objection to the existence of the clear spaces, cover with slightly opaque varnish. In this way very neat and cheap signs may be painted on glass doors.

To be free from desire is money; to be free from the rage of perpetually buying something new is a certain revenue, to be content with what we possess constitutes the greatest and most certain of riches.

It may seem paradoxical, but the best way to float a loan is with a heavy sinking fund attached.

OLD BERKSHIRE MILLS

DALTON, MASS., U. S. A.

One party writes: "The two hundred RECORD BOOKS, for 83 of the 99 Counties, now on exhibition at the Iowa State Fair, at Des Moines; and all, but four (!) of them, made from your 'OLD BERKSHIRE MILLS LINEN LEDGER' Medium, 40lb., make a splendid show."

MANUFACTURED BY
CARSON & BROWN CO.
DALTON, MASS.

[The above cut is a fac-simile of the wrapper used on the Linen Ledger Paper.]

We will pay for any book rejected on account of fault in the paper. Send for Samples, test them in comparison, and see that your books are made from paper thus water-marked.

The J. W. Stoakes Automatic Shading PEN.

FOR PLAIN, FANCY AND ORNAMENTAL
LETTERING.

WASHINGTON, D. C., March, 1880.

I desire to say that the "Shading Pen" invented by
Mr. STOAKES meets a want long felt by penmen.
The work done by it is perfect in line and shade. The
rapidity with which lettering is done, aside from the
beauty of the work, is enough to recommend it for
general use.

W. ROBINSON, Agent.

**MUCILAGE.**

TO find a Mucilage manufactured from good Gum Arabic, that will dry quickly and stick fast, present a fine bright appearance, deposit no sediment, keep in perfect condition any length of time in any climate, that can be sold at a low figure, is something that has puzzled dealers and consumers to find.

CONWAY & CO. are prepared to furnish, in any quantity, a Mucilage guaranteed to stand any or all of the required tests. Samples and prices given to dealers on application to

L. PRANG & CO.'S

Christmas and New Year Cards

ANNOUNCEMENT.

WE hereby beg leave to announce to the trade the completion of our line of Christmas and New Year Cards for this season, for which our agents are now soliciting orders. The extent of our list, the originality, and especially the American character of our designs, together with the great care taken in their execution, will, we have no doubt, secure for our goods the popularity which they have enjoyed heretofore. The efforts we have made to secure the highest excellence, is attested by the names of some of the artists whose designs have been reproduced. We would only name Elihu Vedder, C. C. Coleman, Thomas Moran, Miss Rosina Emmett, Miss Dora Wheeler, Mrs. O. E. Whitney, W. H. Gibson, F. S. Church, R. G. Birch, &c. That a due regard has been paid for the quality of the literary matter, in connection with these designs, is shown by the fact that many of the designs are accompanied by original poems from writers of note, such as Mrs. Celia Thaxter and Mrs. Emily Shaw Forman.

The great increase of our manufacturing facilities, secured by additions to our building nearly doubling our floor space and by the adding of new machinery, will place us in a position to fill orders promptly. Still we would request dealers to place their orders as early as possible, so as to still further enable us to make timely preparation for prompt deliveries.

Our Cards will, as heretofore, be put up in envelopes containing twelve Cards, unless otherwise stated on our price lists.

We furnish envelopes without extra charge for all our Christmas and New Year Cards, for which the list price is \$1.80 per set, and over. Our silk-fringed Cards will no doubt be in great demand this season. We have made ample preparation to furnish these in time and have made arrangements with our manufacturers for the best quality of silk fringes. We would call special attention to the excellence of our fringed Cards and the novelties in colors and style of fringes we offer for this season.

A marked and attractive feature of our cards are the elegantly ornamented backs.

All our new Christmas and New Year Cards are furnished with envelopes and protectors, so as to insure safe transportation in the mails.

It will be impossible to embody our whole list in the space of the advertisement, and we will therefore merely give a general outline of the variety offered.

PRANG'S PRIZE CHRISTMAS CARDS. COMPETITION OF 1881.

These are the Cards selected by the judges in the second competition for four designs of Christmas Cards, for which we offered \$2,000 in prizes of \$1,000, \$500, \$300 and \$200 respectively. At the recommendation of the judges, Messrs. COLEMAN, LAFARGE, and WHITE, the prize for third best Card was increased to \$500. Mrs. CELIA THAXTER has written appropriate verses for each of the designs.

- 1st Prize Card (\$1,000), by Elihu Vedder. Size, $6\frac{1}{4} \times 9$ inches; price \$1 each. Same card with silk fringe, cord and tassels, price \$1.50 each.
 2d Prize Card (\$500), by Miss Dora Wheeler. Size, 7×9 inches; price 75c. each. Same card with silk fringe, cord and tassels, price \$1.25 each.
 3d Prize Card (\$500), by C. C. Coleman. Size, 7×9 inches; price 75c. each. Same card with silk fringe, cord and tassels, price \$1.25 each.
 4th Prize Card (\$200), by Miss Rosina Emmett. Size, $5\frac{1}{4} \times 9\frac{1}{4}$ inches; price 60c. each. Same card with silk fringe, cord and tassels, price \$1 each.

The Prize Cards can also be had mounted on heavy board with gilt beveled edges.

We beg to call attention also to the following publications for New Year and Christmas:

- "Goddess Fortune" New Year Card, by Elihu Vedder. Size, $6\frac{1}{4} \times 8\frac{3}{4}$ inches; price 75c. each. Same card with silk fringe, cord and tassels, price \$1.25 each.
 "Christmas Dove." Size, $7 \times 9\frac{1}{2}$. This card is in the same style as the success of the last Easter season, the "Easter Dove." Price 60c. each. Same card with silk fringe, cord and tassels, price \$1 each.

Our Regular Line of Christmas Cards consists, among others, of the following Series:

- Nos. 901, 902, 903, 906, 909, 910. Floral designs ranging in price from 20c. to \$1.20 per set of 12.
 Nos. 904, 905. Humorous Cat and Frog Designs, 60c. per set.
 No. 907 is a new series of Horseshoe designs, 75c. per set.

- Nos. 920 and 929. Children's designs, at \$2.40 and \$3.60 per set.
 No. 922. Shells of Ocean, with figures, \$2.40 per set.
 No. 924. Fans with silk fringes, \$3 per set.
 No. 933. Bric-à-Brac designs, very rich, \$6 per set, and many others.

We offer a similar assortment of New Year Cards, but would call special attention to No. 1320, a new folding calendar, at \$2.40 per set. Most of the Numbers can be had with silk fringes ranging in price from \$2.25 to \$12 per set. Stock will be ready for delivery September 15.

Besides the above, attention is called to our New Birthday Cards, Scripture Texts Cards, New Panels, New Water Colors, by Thomas Moran, and other publications. Our line of Thanksgiving Day Cards will also be shown by our agents.

REGULAR DISCOUNT TO THE TRADE. PRICE LISTS AND CATALOGUES SENT ON APPLICATION.

Just Out! Something Entirely New. BIRTH ANNOUNCEMENT CARDS. To be used by parents to announce the birth of a child to their friends.

Trade Novelties.

[We will be glad to receive samples of all novelties issued in the trade, and will notice all such which possess merit free of charge. It is desirable to accompany descriptions with cuts whenever possible.]

STEREOSCOPES AND GRAPHOSCOPES.

E. & H. T. Anthony & Co. are constantly getting out something new, and among their latest additions are the "Popular" stereoscope and the grapho-stereoscope. The "Popular" stereoscope is an entire novelty in the scope line. It has black walnut head piece and cross bar and heavy wire shaft and handle, and is a light, compact, cheap and good article. The new patent grapho-stereoscope is made in several sizes and styles. By utilizing the extension part and attaching a folding handle (of which they have a new pattern) they show several styles of folding scopes.

AUTOMATIC WIRE STITCHING MACHINE.

Hasbrouck & Watson expect before long to have ready their automatic wire stitching machine, which will cut, form, drive and clinch a staple, fed from a continuous wire wound on a spool, all in one operation. It will fasten from two sheets to a thickness of three-sixteenths of an inch of paper. A boy can insert from 8,000 to 12,000 staples in a day, according to the character of the work.

The spool contains wire for 3,500 staples, so that at a fair calculation, a lot of 5,000 pamphlets or pass-books can be bound, two staples in each, in a day. It is said to be the only machine in the world, working by hand, that will do this work.

All of the working parts are made of hardened steel, and the whole machine is substantial and durable. It is about twelve inches high and six by ten base, and may be used on a table or anywhere.

The best plated steel is used for the wire. The machine will be largely used by binders, printers, manufacturers, lawyers, railroad and other corporations, and in government offices and courts.

NEW PATENTS.

No. 241,106. Book Rest.—Joel Swartz, Camden, N. J.

No. 244,329. Lead and Crayon Holder.—Claes W. Boman, New York, N. Y., assignor to Jos. Reckendorfer, same place.

1. In a lead and crayon holder, the combination of an expansible lead-clamp and a compressing collar of elliptical or equivalent form. 2. The combination of the sheath or handle, the tip or nozzle provided with compressing faces, and the lead holding tube arranged to have rotary movement with respect to the tip, and carrying expansible lead clamping jaws extending between the compressing faces. 3. The combination of the sheath or handle, the tip provided with compressing faces, the rotary lead containing tube mounted in the sheath and provided with lead clamping jaws extending between the said compressing faces, the longitudinally movable pressure cap connected with the lead tube, so as to impart rotary movement thereto, and the retracting spring.

No. 244,433. Toy Horse and Wagon.—Francis W. Carpenter, Haddonfield, N. Y.

No. 244,440. Vignette Board.—Charles W. Earle, Elkhart, Ind.

No. 244,452. Machine for Stringing Beads.—Wilhelm Halstenbach, Barmen, Prussia, Germany. Patented in Germany, August 20, 1880.

No. 244,469. Revolving Calendar.—George F. McIndoe, Everett, Mass.

GRAPHO-STEREOSCOPE.

No. 244,483. Paper Bag.—Léon Planche, Salins, France. Patented in Italy, January 9, 1880; in Austria, January 8, 1880; in Spain, January 8,

"POPULAR" STEREOSCOPE.

1880; in France, May 25, 1880; in England, May 31, 1880; and in Belgium, June 1, 1880.

The combination, with a paper bag, of a strap or band of paper permanently attached to the

bag, does not interfere with the folding and packing of the bags in the bundles or packages.

No. 244,485. Envelope Machine.—Abram A. Rheutan, Worcester, Mass., assignor to Wade H. Hill, same place.

No. 244,503. Manufacturing Wall Paper.—W. Charles Walter, New York, N. Y.

1. A method of making wall papers by printing the design in colored varnishes and spreading over the same colorless transparent flock. 2. In the manufacture of flock wall paper, spreading upon the varnished ground colorless transparent flock. 3. A method of manufacturing flock wall paper, consisting of the following steps: First, laying upon the tinted surface of the paper a ground of uncolored varnish and transparent uncolored flock; secondly, printing thereon the design in colored varnishes, and lastly, spreading thereon colorless transparent flock. 4. As a new article of manufacture, a flock wall paper, covered with colored varnishes and colorless transparent flock. 5. The combination, with a flock wall paper, of raised ornaments secured thereto at the meeting edges and upon the body of the same.

No. 244,508. Combined Scissors and Pencil Holder.—Jno. H. Woodward, New York, N. Y., assignor to Joseph Reckendorfer, same place.

A spring on the under side of one of the handles has an inclined projection on its free end, which bears against the edge of the opposite handle to throw the handles apart and at the same time bring the cutting edges of the blades in close contact.

No. 244,530. Die.—Robt. A. Bacon, New York, N. Y.

1. Dice provided with pictorial representations appropriate to the game being played. 2. A die having on its faces pictorial devices representing the faces of the cards used in playing poker. 3. The combination, on a die, of the usual spots on each face with pictorial representation of the cards used in playing another game.

No. 244,559. Newspaper Wrapping and Addressing Machine.—Luther C. Crowell, Brooklyn, N. Y.

No. 244,574. Canceling Device for Postage, Revenue, and other Stamps.—John P. Farmer, Penn Yan, N. Y., assignor of two-thirds to David J. Farmer and Samuel Farmer, same place.

No. 244,586. Hobby-Horse.—Albert Goodspeed, Hubbardston, Mass.

No. 244,634. Type-Setting Machine.—Wm. A. Lorenz, Brooklyn, N. Y., assignor, by mesne assignment, to Edward N. Dickerson, trustee.

No. 244,646. Toy Savings Bank.—John Murray, New York, N. Y.

No. 244,658. Toy Furniture.—George N. Pierce and Michael Bernhard, Buffalo, N. Y.; said Bernhard assignor to said Pierce.

No. 244,663. Toy Watch.—John G. Powell, Philadelphia, Pa.

No. 244,678. Temporary Binder.—Albro F. Shorey, Boston, Mass., assignor to Lucien Sanderson, same place.

No. 244,682. Printer's Adjustable Chase.—Danl. Synder and Ellwood Ivins, Philadelphia, Pa.

REISSUES.

No. 9,800. Paper Cutting Machine.—Edwin R. Sheridan, Brooklyn, N. Y. Original No., 227,999, dated May 25, 1880.

No. 9,815. Manufacture of Boxes.—Wm. H. Allen, Brooklyn, N. Y., assignor to Samuel M. Bixby, New York, N. Y. Original No., 182,543, dated September 25, 1876.

Passionate men are like men who stand on their heads; they see all things the wrong way.

AUTOMATIC WIRE STITCHING MACHINE.

bag, and adapted to extend across the mouth thereof when closed, a paper bar secured at the ends to the bag, and under and around which the free end of the strap or band may be passed and doubled, and a second bar, under which the free end of said strap or band is passed and returned backward or upward upon itself, providing a simple and cheap fastening, which cannot get displaced, as it is permanently attached to the bag, and which, being made of paper, like the

COMPOSITION BOOKS.

(Copyrighted, June, 1881.)

Something entirely new and attractive for the School Trade. One of the best selling books published. They are printed on our best manila paper, bound in heavy covers with rounded corners. At the head of each page is printed a cut of some simple subject for the children to write about. The name, “*Pretty Stories*,” will cause almost every child to want it. The book is recommended by the best primary teachers in the country. *FIRST SERIES*, 6½ × 8 inches, 24 pages, per 100 books, \$8.00. Put up in packages of 25 books each.

We have added to our *Portfolio Tablets* a line of *Fine Linen Paper*, bound in Leatherette, with stamped covers, very handsome; and also are putting up a new style of Tablet in *Fine White Writing Paper*, bound in ornamental flexible covers, with stiff back, which we call our “*TOURISTS’ TABLETS*,” in Commercial and Packet Note, and Congress Letter Sizes.

"THE GREAT ROCK ISLAND ROUTE"

Calls your attention to the following REASONS WHY, if about to make a Journey to the GREAT WEST, you should travel over it:

As nearly absolute safety as is possible to be attained. Sure connections in UNION DEPOTS, at all important points. No change of cars between CHICAGO, KANSAS CITY, LEAVENWORTH, ATCHISON or COUNCIL BLUFFS. Quick journeys because carried on Fast Express Trains. Day cars that are not only artistically decorated, but furnished with seats that admit of ease and comfort. Sleeping cars that permit quiet rest in home-like beds. Dining cars that are used only for eating purposes, and in which the best of meals are served for the reasonable sum of seventy-five cents each. A journey that furnishes the finest views of the fertile farms and pretty cities of Illinois, Iowa and Missouri, and is afterwards remembered as one of the pleasant incidents of life. You arrive at destination rested, not weary; clean, not dirty; calm, not angry. In brief, you get the maximum of comfort at a minimum of cost.

That the unremitting care of the Chicago, Rock Island & Pacific Railway for the comfort of its patrons is appreciated, is attested by its constantly increasing business, and the fact that it is the favorite route with delegates and visitors to the great assemblages, political, religious, educational and benevolent, that assemble from time to time in the great cities of the United States, as well as tourists who seek the pleasantest lines of travel while en route to behold the wonderful scenes of Colorado, the Yellowstone and Yosemite. To accommodate those who desire to visit Colorado for health, pleasure or business, in the most auspicious time of the year, the Summer season and months of September and October, the Company every year puts on sale, May 1st, at all coupon ticket offices in the United States and Canada, round trip tickets to

DENVER, COLORADO SPRINGS AND PUEBLO.

At reduced rates, good returning, until October 31st. Also to San Francisco, for parties of ten or more, good for ninety days, at great returning from regular fares.

REMEMBER, this is the most direct route for all points WEST and SOUTHWEST. For further information, time-tables, maps or folders, call upon or address

R. R. CABLE,
 Vice-Pres't and Gen'l Man'gr, Chicago.

E. ST. JOHN,
 Gen'l Ticket and Pass'r Agent, Chicago.

Full Descriptive Price List may be had on application to

THOS. DE LA RUE & CO.,
Wholesale Manufacturing Stationers, Printers, Publishers, Card Makers, &c., &c.
BUNHILL ROW, LONDON, ENGLAND.

Letters may be addressed to their American Representative, MR. A. J. PULSFORD (P. O. Box 1590), New York.
N. B.—To prevent delay, all applications for Pattern Books should be made to Mr. Pulsford, as above.

Trade Gossip.

All new goods and designs which are not, strictly speaking, "Novelties" will be noticed under this head. The trade are requested to forward descriptions with samples in order to secure proper notice.

A. Crawford Green, printer, Providence, R. I., is dead.

John H. Bly, fancy goods dealer, Manchester, N. H., has failed.

S. Saunder, publisher, Neligh, Neb., has sold out to Beechman & Co.

A. J. Steele, publisher of the *Star*, Wolfville, Nova Scotia, has left the country.

The stock of Mary Ebeler, dealer in fancy goods, Columbia, Col., has been attached.

D. M. Armor, of Armor, Gillespie & Co. (Limited), lithographers, Pittsburg, Pa., is dead.

Leake & Welman, publishers, Neligh, Neb., have sold out to J. Greaves, of Vermilion, Dak.

Ellwood T. Paxson, of E. T. Paxson & Brothers, dealers in notions, Philadelphia, Pa., is dead.

O. A. Porter has been admitted to the firm of J. J. Weisenburger, publisher of the *Tribune*, Truckee, Cal.

The R. E. Johnson Paper Bag Company, Middletown, O., has been incorporated, with authorized capital of \$30,000.

Myers Brothers say that they will show the most exquisite cabinet papereries that will be placed on the market this year.

Wiltshire & Clement, 78 Nassau street, New York, handle a full line of Obpacher Brothers Christmas cards and other goods.

E. B. Eshelman, of the firm of E. B. Eshelman & Co., publishers of the *Democrat*, Wooster, O., has sold out his interest to H. P. Gravitt.

Patrick & Wilson, wholesale and retail book-sellers and stationers, Evansville, Ind., have dissolved partnership. A new firm continues under same style.

John M. Drew, representing Wiltshire & Clement, is on the road. He carries Obpacher & Brothers' goods, and will visit the trade through Pennsylvania and New Jersey.

Ellison R. Cook has withdrawn from the firm of Robinson, Campbell & Cook, Atlanta, Ga., and has taken a position with F. G. Hancock, of the same place. He will sell Mr. Hancock's goods, consisting of paper boxes of all kinds, paper and paper bags, blank books, and staple stationery generally.

B. E. Pike, with M. A. Reay, has returned from Cape Cod, where he has been spending his vacation, and will soon start on a Western trip. He will carry samples which will consist of many novelties, including new wedding goods, new sizes for correspondence, menus, and Lowell's Christmas and New Year cards. Mr. Pike says the line is the best the house has ever showed.

H. C. A. Gibbs, with Willy Wallach, returned about ten days ago, and owing to sickness and death in his family he will be a little late in starting out on his fall trip. He trusts his many customers will make allowance for his tardiness, in view of his misfortunes, and will wait his coming. Jacob H. Brown, also with Mr. Wallach, has been meeting with good success in the sale of Tuck's Xmas and birthday cards. He is now in the West working homeward. C. S. Adams starts out in a few days on his Southern trip.

John Gibson has completed the improvements at his establishment, 82 and 84 Beekman street, noticed a short time ago, and wishes it to be understood that he has no partner, the style of the firm still being John Gibson. Mr. Gibson is doing a good trade, and all of his salesmen, including Messrs. Thomas, Schmook and Aikenhead are on the road, and are sending in very large orders, which in spite of his increased facilities keeps his establishment hard run to execute.

A. M. Collins, Cope & Co. show new designs in folding cards, representing the four seasons, designed by a Philadelphia lady. No. 234 is a new set of floral cards in five designs, which this firm claims is the finest American florals ever produced. These goods are handled exclusively in Chicago by George H. Taylor & Co., in Cincinnati by Chatfield & Woods, and in Boston by Carter, Rice & Co. The No. 295, in four designs, is a set of grotesque musicians, drawn by J. C. Beard.

Boorum & Pease have just brought out several new lines of celluloid covers for autograph and photograph albums, embossed, and hand-painted in a number of very beautiful designs. This firm has just issued its annual catalogue and price list of fine leather goods. The catalogue contains sixty-four illustrations, and will enable those not visiting New York and who cannot be visited by the firm to order as intelligently as from samples.

The "No. 36" price list of school supplies, just published by Charles J. Cohen, Philadelphia, is received. It is neatly printed and well indexed, with space for memorandum of orders on each page. This is a great convenience to intending buyers, enabling them to make their notes as to quantities, &c., in connection with each article required. The list embraces a full variety of goods most in demand at this special season.

Among the visiting members of the trade to the city during the week were Mr. Hackney, of Jansen, McClurg & Co., Chicago; Henry Snider, of Louis Snider's Sons, Cincinnati; Mare Holmes, of Snider & Holmes, St. Louis; E. L. Davis, of Bailey, Banks & Biddle, Philadelphia, and Mr. McPherson, of Woolworth & Colt, St. Joseph, Mo.

The indefatigable E. B. Green, of A. S. Barnes & Co., one of the best known salesmen in the stationery and book trade, is taking his usual vacation, and at present is enjoying the beauties of the Adirondacks. Edward Holmes, a genial gentleman also connected with the same house, has just returned from a tour of recreation.

O. H. Greenleaf, of the Holyoke Paper Company, was in town this week. He was at Manhattan Beach, Coney Island, on Tuesday, and will probably stop there with his wife and daughter during the remainder of the week.

Agnes Gertrude, only daughter of W. H. Hill, of Worcester, Mass., died very suddenly on the 28th ult., of diphtheritic sore throat. Mr. Hill's many friends in the trade will sympathize with him in this sad affliction.

John D. Yost, of H. S. Crocker & Co., San Francisco, arrived here this week, but left for the East. He is now in Springfield, and will be away a week or two before he returns.

The stock, &c., of N. B. Williams & Co., book-sellers and stationers, Providence, R. I., has been sold out at assignee's sale to H. Gregory.

Barnes & Simmons, publishers of the *Shasta County Democrat*, Redding, Cal., have dissolved partnership.

Hill & Adams, publishers, Morrison, Ill., have dissolved partnership. A. D. Hill succeeds.

A. Goldstein, dealer in notions, Council Bluffs, Iowa, is closing up.

Brower & Connor, printers, Salinas, Cal., have dissolved partnership.

C. L. Johns, dealer in fancy goods, Lebanon, Tenn., has been burned out.

Charles D. Rubel & Co., printers, Chicago, Ill., have dissolved partnership.

W. L. Arnold, publisher of the *Marion County Republican*, Salem, Ill., has sold out.

Marrs & Thomas, publishers of the *Kentucky Advocate*, Danville, Ky., have sold out.

Davis & Forrest, publishers of the *White Pine News*, Hamilton, Nev., have dissolved partnership.

The stock of Gidley & Wheeler, dealers in fancy goods, Ann Arbor, Mich., has been attached.

O. P. L. Spencer has retired from the *New Era Steam Printing Company*, Saybrook (Deep River), Conn.

It is asserted that there is not a more varied or handsomer line of card cases to be seen than that shown at J. D. Whitmore & Co.'s.

That line of elegant holiday boxes just shown by J. D. Whitmore & Co. should be seen by the trade whether they intend to buy or not.

H. Conroy & Son, fancy goods dealers, St. John, N. B., have been sold out, for benefit of creditors by trustee sale.

The pocketbook makers of Philadelphia, went to Atlantic City on July 22, and had a splendid time. The whole affair was a success. A ball is contemplated for next winter.

R. G. Hutchinson has made a great improvement in his already popular "Novelty" bill holder, which is now claimed to be the best on the market. The trade should see it in order to appreciate it.

W. A. Wheeler, Jr., although comparatively a young man in the stationery business, with a fair showing of government contracts and a good patronage from some of the large corporations and mercantile houses, is said by some of his friends to be getting his barrel of money rapidly filled, and bids fair to rank among the most solid men of the trade.

Koch, Sons & Co., New York, have issued their catalogue for the season 1881-82. It is well printed, neatly gotten up, and comprises fifty-four pages, which are full of items of information for the trade. Photograph and autograph albums, binders, scrap books, portfolios, desks, chess and backgammon, and many other other things are accounted for in this price list.

R. Fideau, 16 Beekman street, has made a contract for one hundred gross of school bags to supply a large notion house in this city. Mr. Fideau has bought another loom, which will enable him to fill his orders for school bags with more promptitude. He is also kept very busy in filling orders for school slates and hammocks, and for the latter the trade keeps up remarkably well.

L. C. Styles, who is well and familiarly known throughout the trade, and who until recently was prominently connected with McCarty & Hasberg, has formed a connection with Nathaniel Bloom, 473 Broadway, in the capacity of salesman, and will be glad to see his old friends and patrons at the firm's warerooms, where he will show them lines of fancy goods adapted to the stationery trade, and which are said to be equal if not superior to those offered by any other house in this city. Mr. Styles says that those who may not have an opportunity to visit the warerooms, or person-

ally see him, will be extended every courtesy by communicating with him.

John McLaughlin, of McLaughlin Brothers, printers, Philadelphia, Pa., is dead.

H. McKelvey, stationer, &c., Parker City, Pa., has sold out to D. S. Wakenyhr.

T. J. Hoffman, bookseller and stationer, Leipsic, O., has sold out to A. D. Young.

J. Frank Howe, fancy goods dealer, Seneca Falls, N. Y., has made an assignment.

M. X. Carr, bookseller and stationer, Thorold, Ont., Can., has been succeeded by W. Bicken.

Geo. W. Arms & Co. have bought out Kennedy & Arms, stationers, &c., Philadelphia, and will continue the business at 321 Chestnut street.

McCarty & Hasberg have had more customers so far this season than at the same time in any previous year. They expect to be very busy soon.

Owen & Axtell, booksellers and stationers, Franklin, Pa., give notice that they have "repurchased" their store and that they "will conduct the business as usual."

Among the members of the trade who visited the city during the week were R. Crampton, Rock Island, Ill.; W. E. Seymour, of Seymour & Stevens, New Orleans; Mr. Shepherd, of Shepherd & Co., Portland, Me., and W. Seymour Alden, Middlebury, Conn.

The uses of paper board have recently been multiplied, and its durability greatly increased, by the following improvements in its manufacture: When a sheet of paper is immersed in an ammoniacal solution of copper and then dried, it is found to be quite impregnable to water, and does not lose this quality even though the water be boiling. Two sheets of paper thus prepared and passed through a cylinder adhere to each other so completely as to be quite inseparable; if, then, a considerable number of sheets so prepared be cylindered together, boards of great thickness are obtainable, the resistance and cohesion of which may be increased by interposing fibrous matters or cloths. Thus prepared, the substance is quite as hard as the closest grained wood of the same thickness. The ammoniacal solution of copper is prepared by treating plates of copper with ammonia of the density of 0.880, in contact with the atmosphere.

The demand for elegantly stamped stationery, both from private dies and that sold by all first-class stationers, being more in demand than ever before and increasing, several of the manufacturers have undertaken to meet that demand with workmanship and designing of more or less artistic taste and merit. The placing upon the market of a line of these goods entails no small amount of labor, concentration and artistic thought, and when parties are unscrupulous enough to pirate designs and styles that have won deserved popularity, or undertake to make use of designs from a line that, as a whole, has met with success, it becomes necessary for the manufacturer to use immediate and effective means to prevent further abuse in this respect. J. D. Whitmore & Co. are busily engaged in filling orders for this class of goods, having sold largely from the sample line shown in the last few weeks. They have put in additional facilities to be fully prepared to meet all demands made upon them. Their designs have been prepared with great care by workmen under their supervision, and all work is done wholly and only on their own premises. They have taken measures to protect their designs and style of manufacture, and no infringement will be tolerated.

THE STATIONER.

DEVOTED TO THE INTERESTS OF THE

Stationery and Fancy Goods Trades.

WEEKLY—\$2.00 PER ANNUM.

Single Copies - - - 10 Cents.

NEW YORK, THURSDAY, AUGUST 4, 1881.

Advertisements cannot be received for insertion in the current week later than 12 M. on Wednesday. The charge for advertising is 25 cents a line, each insertion. Special terms for standing and displayed advertisements to be had on application.

This journal aims to be a medium of information for and a representative of the interests of every one connected with the stationery and fancy goods trades. It contains a full and trustworthy survey of the market for stationery in this country, in all cases giving the actual prices at which goods can be bought of importers and jobbers in this city, together with a detailed account of novelties in the trade, patents relating to stationery, and current items of interest. A review of foreign markets and accounts of movements abroad will also be furnished, and no pains will be spared to make THE STATIONER a thorough and complete exponent of the trade.

Subscription and postage for Great Britain, per annum..... 12s.
Any information our readers may wish to obtain shall be cheerfully given, and prompt replies will be made to all inquiries addressed to us on any subjects of interest to the trade.

Communications on all trade matters are earnestly solicited. Address

HOWARD LOCKWOOD, Pres. and Treas.

American Stationer Association,

74 DUANE STREET, NEW YORK.

Subscribers to THE STATIONER can be supplied with the best cloth binder in the market. Deliverable at the publication office. Price, fifty cents.

Readers of this paper who avail themselves of the information obtained from its columns, by advertisement or otherwise, are requested to notify their correspondents of the source of their information.

PITY the poor editor!

TRADE is beginning to simmer.

SOMETHING ought to simmer this summer.

OUR Philadelphia correspondent notifies us privately that it is warm.

BUT this is not news. The trade, however will be surprised to learn that, in Philadelphia, eggs when laid are found to be cooked.

SOME latitude must be permitted for the expression of editorial feeling, particularly when it is known that the editor has just received a pressing invitation from the aforesaid correspondent to visit Philadelphia—this at a time when, by some misdirection of atmospheric currents, the editor has secured such a "crick" in the neck that he cannot even wilt.

WE are not talking of the weather. Perhaps some of the trade would like to know what all this has got to do with stationery. Not much, if anything. Our only excuse lies in the fact that we are stationary—can't get away, in fact, just because we have to give the trade the news, tell them what and where to buy, and lecture them generally, provided we can find anything to lecture them about. But we can't.

THE daily newspaper says that the thermometer marks 88°. The only instrument that we can rely on says 92°, and it seems to want to go higher. These are pleasant days. Only imagine the Arctic regions, where people have too much ice and have to suck icicles to allay their thirst. It doesn't cost them anything either. Refrigeration is conducted on costlier principles here—and a man doesn't want to be seen going after it.

BUT to talk seriously. Much depends upon the crops. There has been a great effort to run down the harvest results, and all sorts of estimates have been made for the purpose of prejudicing the grain markets in the interest of speculators. It has been asserted that there will be a shortage in wheat, a great deficiency in corn, and we don't know how many other stories to induce distrust, and to make farmers withhold deliveries, with other attempts to unsettle trade for the benefit of gamblers. Commercial interests, outside of the grain and flour trades, must combat every effort to spread false reports and overcome whatever impressions may be excited to the disadvantage of general business. Every day we find that revised estimates of the harvests are in order, and we are apologetically told that the crop in some State or locality turns out better than was expected. We do not believe that there is to be any crop deficiency—at least to an extent that trade will be unpleasantly affected. All of our

correspondents report the most encouraging news, and say that the trade in various sections feel confident of an active season. This is a better commercial barometer than the produce markets, where everything is moved by alternations of fictitious statements. Wherever and whenever any of the trade get the opportunity, they should not omit to give their help to encourage the doubting, and to dispel the anxieties of those who feel uncertain as to the crop returns. Don't "boom" the business, but let us have the truth told.

RETURNS of the foreign commerce of the United States, for the fiscal year ended June 30, are very satisfactory. The Treasury Department's twelfth monthly statement, for the fiscal year 1880-81, of imports and exports, shows an excess of merchandise export values of \$4,541,931 for the month and of \$259,726,254 for the year. We are taking in quite a respectable amount of money therefore, and the balance of trade shows heavily in our favor. The success of the Treasury in reducing the interest charge on our bonds is another big feature, which will be felt in the course of the coming year's transactions. Again, we decreased our public debt more than \$100,000,000 during last year, and for the first month of this year a decrease of over \$10,000,000 is noted. Facts, such as these, point to a prosperous condition of business in all of its ramifications, and ought to encourage everyone who has permitted his faith to be shaken by the prophecies of habitual doubters or the insinuations of pessimistic or interested individuals. But these are only some of the remarkable features of our national prosperity, which we hope will increase under a vigorous administration which will root out abuses and enforce the power and authority of the people. If we will but think how, in connection with the immense sums of money which are flowing through the national treasury, there is comparatively little speculation going on, we have further reason to congratulate ourselves as a people upon the splendid results achieved in administration. The internal revenue bureau affords a remarkable example of efficiency and economy. We learn from the report of the Commissioner of Internal Revenue that the annual examinations of the different collection offices, made at the close of the fiscal year ended June 30, 1881, have been completed and show that the records have been accurately kept and that the accounts are correct. The sum of \$135,229,902.12 was collected and duly paid into the Treasury. The sum collected during the past five fiscal years is \$602,310,787.22, the entire amount of which, without any loss or defalcation, has been paid into the Treasury. The expenses of the Internal Revenue service during the past fiscal year will be shown, upon the final adjustment of the accounts, not to exceed \$5,063,330. It is difficult to add encomium to this showing. It tells its own story, and we are sure that the people will appreciate it.

THE SUN ELECTRIC LAMP.

La lampe soleil, as it is termed, is a new French electric lamp of considerable promise and some novelty. The light is formed by boring two converging holes into a small block or brick of marble, and inserting into these two carbon rods. The rods are separated at their points by a partition of the marble, and they nearly penetrate through the block. Their upper ends are connected to the dynamo-electric machine, and the current in traversing the wall of marble between their points makes it white hot. The carbons are slowly consumed, the gas escaping by the bore-holes, which are wider than the rods, and they are fed to the arc by their own gravity. The light is emitted by the bottom of the brick, which becomes calcined, and is of a mellow lustre like the sunshine. The cost is said to be only a sou per hour, the carbons consuming at the rate of a centimetre in that time. Already *la lampe soleil* has been introduced into several places in Paris, including the mayor's residence, and it will form a feature of the forthcoming exhibition. It is the invention of MM. Clerac and Bureau; but it reminds us of the electro-calcic lamp patented by Wentworth L. Scott in 1878, wherein a block of lime or other earth is interposed between the electrodes of the arc. Mr. Scott did not arrange his apparatus like the sun lamp, but his intention was, we understand, to heat a piece of lime white hot by the current, just as it is heated by the mingling gases in the Drummond line light.

Among the visiting members of the trade in the city this week were J. L. Pratt, of Fairbanks & Co., Boston; John D. Yost, of H. S. Crocker & Co., San Francisco; Mr. Walker, of Maurice I. Loeb & Co., Baltimore; Mr. Greve-meyer, of Elder, Greve-meyer & Bentley, Philadelphia; Mr. Prior, of Prior & Thompson, Scranton, Pa.; T. M. Praigg, Gainesville, Tex., a representative of George E. Cole & Co., Chicago; Mr. Hart, of Hart & Co., and W. C. Campbell, of the Canada Publishing Company, Toronto, Canada; Mr. Brown, of Brown Brothers, Sedalia, Mo., and H. Lehman, Chicago.

ANSWERS TO CORRESPONDENTS.

A. B. M. asked last week about Department of Agriculture reports.

Ans.—We are now told that J. D. Milaus, 603 Seventh street, Washington, D. C., will supply them.

Subscriber wants address of "Favorite" files.

Ans.—Cooke & Cobb, 10 Broadway, New York.

P. has seen the words "Incunabula" and "Tornography," and not finding them in his dictionary wants to know what they mean.

Ans.—"Incunabula" is the term used to refer to early printed books, especially those printed anterior to A. D. 1500. The word "Tornography" has not reached our vocabulary, and we are doubtful of its meaning.

John W. Lovell, book publisher, 14 and 16 Astor place, New York, has become financially embarrassed and has placed his affairs in the hands of his creditors in order to obtain an extension until December 31. He has been doing a very large business on a moderate capital, and when the dull season arrived he became cramped for ready money to meet maturing obligations. He had a large amount of stock in the hands of the printers and binders in this city, Boston and Chicago, which he was unable to get out of their hands for want of money to pay the amounts due thereon. Notes fell due very fast, and on one for \$480, which was not paid, judgment was obtained, but execution was not issued. The chances of other creditors' pressing their claims to judgment determined him to present the condition of affairs to the large creditors and ask an extension of the general liabilities until December 31, by which time he hoped to realize by the fall and holiday trade and be enabled to extricate himself from his embarrassment. A meeting of the principal creditors was held a few days ago at his office, when a full statement was presented to them, from which it appears that the general liabilities were about \$150,000 and mortgage liabilities \$75,000, making a total indebtedness of \$225,000. The nominal assets aggregated \$350,000, consisting of stock on hand and in process of manufacture, stereotype plates, fixtures and machinery and real estate. He owns an establishment at Rouse's Point, where he reprinted English books, which, with the machinery and fixtures, cost \$150,000. It is mortgaged for \$22,000. The creditors finally determined to arrange the extension and extricate him from the present embarrassments. An advisory committee of five was appointed to supervise the business, Mr. Lovell agreeing to act under their instruction in the management of the business. The committee have undertaken, with the other creditors, to see that the arrangements are carried out. A member of the committee said that all the large creditors had joined in the arrangement granting the extension. The amount on which the extension was asked was \$125,000, besides which there were about \$25,000 due to a large number of small creditors, which the committee advises Mr. Lovell to pay as they mature. The large creditors would advance \$100,000 in material and work in order to carry out the arrangement. The binders and printers joined in the agreement, and would give up the goods in their hands, and the committee would see that these goods were properly handled and all the work paid for. In regard to the assets, he thought that they were sufficient under the arrangements provided to pay all the claims in full by January 1, and have a good surplus left; but if he had been pressed and the goods sacrificed in the unfinished state, the assets would not begin to pay all the claims.

Other creditors said they had signed the agreement for the extension, and felt sure that Mr. Lovell would be extricated by the end of the year. It was also learned that Mr. Lovell carried a life insurance of \$52,000, and was interested in the Manhattan Book Company, which was run during the holidays on Fourteenth street, near Fifth avenue.

The *Traveler's World* is the name of a bright, well printed and sparkling newspaper, which has just made its debut. It is intended to enlighten and amuse the traveling public.

Market Review.

OFFICE OF THE AMERICAN STATIONER, I
WEDNESDAY, AUGUST 3, 1881.

THE MONEY MARKET.—Money continues abundant and easy at 2 @ 3 per cent. on call, 3 @ 5 per cent. on time stock loans, and 3 @ 5 per cent. for prime commercial discounts. The activity and buoyancy of stocks during the latter part of last week proved to be transitory, the market having since relapsed into a dull and depressed condition. The railway war has given no sign that the managers of the trunk lines are disposed to settle their differences, and the low rates of transportation are operating in the interest of the bears in stocks. Railway bonds have also shown weakness, in sympathy with the share list. Government bonds remain steady and firm, with some advance in the four per cents. The foreign exchange market is quiet and steady. Rates are nearly down to the point for profitable imports of gold, yet the possibility of decreased produce exports renders the current of gold in the immediate future uncertain. Prime bankers' sterling bills were nominally \$4.83 and \$4.85, and actually \$4.82½ and \$4.84½@4.84½, with cable transfers \$4.84½@4.85 and prime commercial \$4.80½@4.80¾.

THE PAPER MARKET.—The volume of trade keeps up good summer proportions, and prices of most of the leading grades have a fairly good support. Stocks in the hands of dealers are not as large as usual at this time of the year, and while store trade may not be called active, large orders for goods to be made up and delivered, during the next and succeeding months, give promise of a large distributive movement during the autumn season. Manufacturers, as a general thing, show less disposition to cut prices to secure orders than they did a month ago, and if we should have any prolonged drought, such as that of last year, an advance in prices would be probable. As the situation is at present, the demand and supply are so equalized that there is very little probability of any shrinkage in values during the remainder of the summer. The Eastern straw wrapping mills which were shut down during the month of July, started up again the first of this week. Some of them, in consequence of the dry state of some of the streams, will not be able to run their full capacity. There is a scarcity of heavy weight paper, which may be supplied by the mills getting to work again. The Western mills were shut down from July 18 to 31, and it is probable that they have resumed running.

THE STATIONERY MARKET.—Trade improves with the advance of the season, and most of our city dealers report a better business in progress than is usual at this time of the year. Quite a number of Southern and Western buyers have been in this week, and accessions are being made daily. Our reporters have conversed with members of the trade from different sections of the country, and all without exception express in the most glowing terms their belief in the favorable prospect for trade in their respective localities. A healthy feature of trade this season is the disposition shown by buyers to either buy on shorter time, or to pay cash for what they buy, and receive the benefit of the discount by so doing. There is no probability that anything will turn up to be a drawback upon commercial prosperity in the near future, everything at present giving such a favorable outlook. Prices remain steady and firm.

THE GERMAN FANCY GOODS TRADE.

The fancy goods trade, which in Germany is a very comprehensive one and includes a vast assortment of articles, has not lately been by any means in a prosperous condition. At the same time there has not been noticed any lack of inventive faculties as regards the production of novelties; in fact, the number of novelties brought out appears to be greater than ever, but there is one chief difficulty experienced in connection with them—the difficulty of selling them.

According to special reports on trade in Germany, the state of affairs there has lately been far from satisfactory. Thus we read that the people have become so much accustomed to dull times that the term “unsettled” is no longer applicable to the condition of the trades and industries of the country. The wages of all employees continue to show a diminishing tendency, while the cost of living, and most of the necessities of life are, in consequence of the operations of the new imperial tariff and other causes, considerably higher. The American Consul at Stuttgart (Mr. Potter), reporting specifically on the sale of American goods in Wurtemberg, gives some interesting information concerning fancy goods manufactured in that locality, as well as those imported thither. With regard to “jewelry and fancy goods,” he states that it is a surprising fact that goods of this description are now imported from the United States in large quantities by dealers in Germany who, until a recent date, have been chiefly engaged in supplying America with similar articles of luxury and utility. Fancy rubber goods in great variety, gold and aluminum pencils, gold pens, lockets and rings, chains, cast iron in combination with glass, ink stands, and many other specialties may be found in nearly every possible size, style, and dress. In this latter branch of the toy trade the business of Sonneberg centres. The female population takes an important part in the industry, especially in the hair-dressing and robing of dolls; and in the division of labor, through which alone all these articles can be cheaply produced and prepared for market, there are employed smiths, tin-workers, bookbinders, pasteboard makers, furriers, coopers, carpenters, and cabinet makers, and other craftsmen, in the preparation of the various parts. Many materials which are needed in the manufacture have to be obtained from distant places, although they might be very well produced at Sonneberg. Among such materials may be named paper, leather, twine, glue, varnish, colors, wax, paraffin, gold and metal leaf, &c. The goods are packed for shipment in wooden cases, which are generally lined with zinc if destined to cross the sea. There are about one hundred persons engaged at Sonneberg in making wooden packing cases, and complaint is made that the prices for this necessity of the trade are too high in comparison with those of other neighborhoods. Three other important branches of industry in this district take rank with that of toy-making, and are intimately connected with it, viz., the manufacture of glass ornaments and beads, stone marbles, and china ware. In the neighborhood of Lancha, a village about fifteen miles distant from Sonneberg, some eight hundred persons are employed in the glass works and in glass-blowing at their own homes. The principal productions are apothecaries’ glassware, marbles, beads, ornaments for Christmas trees, thermometers, and eyes for dolls and animals. Artificial human eyes are also produced, at Lancha, of so perfect a quality that they have gained a world-wide reputation, and received a premium at the Philadelphia Exhibition. Stone marbles

are made from a shell limestone found in the hills between Sonneberg and Eisfeld. The stones split easily into cubes under the hammer, and are ground into shape by water power. The colored polished marbles are also prepared in the mills. A large number of persons are employed in breaking the stone for these marbles, but their earnings are miserably small. During recent years large quantities of crude marbles have been shipped to France and there made ready for market. Low duty and favorable freight conditions have rendered it possible for the French in this way to compete with the finished German article. The average quantity of marbles produced annually in this district exceeds one hundred millions. There are twenty or more china factories in the district, each of which employs from two hundred to eight hundred hands. The principal articles manufactured in these establishments are table services, figures, dolls, fancy ware, pipe bowls, and toys of various kinds. The clay used in these factories is mainly obtained in their immediate vicinity, only the very finest sort which is needed being imported from Bohemia and France.

COLOR PHOTOGRAPHS.

A recent communication to the French Academy of Sciences announces a new method of taking photographs in color, which, although it is not a solution of the prime problem for photographers, how to photograph nature in her own hues, is at least some mechanical approach to it. It is the invention of Ch. Cros and J. Carpentier, and consists in taking three separate photographs of the red, yellow, and blue tints, then combining them. Three negatives of the object are first taken, one through a screen of orange liquid, one through a screen of green liquid, and one through a screen of violet liquid. The varying opacities and transparencies of these negatives indicate the relative quantities of red, yellow, and blue tints in the object. The proofs are taken on plates of glass coated with coagulated albumen which has imbibed bichromate of ammonia. A transparent negative, or first photograph, is applied to one of these and exposed for some minutes to a diffused light, so that the transparencies and opacities of the negative shall imprint themselves on the sensitive albumen. The proof plate is then plunged into a coloring bath, and in the parts protected by the opacities of the negative the coloring matter spreads and fixes itself. By repeating this operation with the three different negatives the three colors are combined on one glass plate and a fair imitation of the original object is the result. Of course, for the image obtained through the green screen the coloring bath is red; for that through the orange screen, blue; and for that through the violet screen, yellow. The same screens and pigments serve to reproduce all sorts of polychromes. The screens hitherto used are glass vessels filled with solutions of chloride of cobalt, chromate of potash, and sulphate of copper. When the electric light is used the screen is put before the lamp, so that the object will be illuminated by a monochromatic light and photographed in the ordinary way.

When a man speaks the truth you may count pretty surely that he possesses most other virtues. And if he is found to be untruthful most other vices are near at hand.

You must not splutter or be "fussy" over your work. The fussy fellow can waste time in his haste as well as the dawdler in his slow trifling.

LUCKHARDT'S PROCESS OF PHOTO-ENGRAVING.

This process, which has been rightly called a "Columbus' egg," like so many others owes its origin to chance. Being requested, at a few hours' notice, to draw a portrait for a circle of friends, I intended to use as a guide a photograph, the printing of which was, however, delayed. The idea then occurred to me to coat the negative, which was at hand, with yellow varnish, and to etch the portrait with the needle on that ground. As I wished to make a caricature, the salient characteristics of the negative were retained as a foundation, the transparent parts etched out, and the clothing altered. In this way the photo-engraving was produced, the further use of which, I believe, is not to be undervalued. In view of the circumstance that the drawings and wood cuts of portraits which appear in the illustrated papers have frequently lost the likeness of persons whom they represent, and that notwithstanding they are costly and require a long time to produce, would it not be advisable to use engraved photographs instead, even when the original negative, taken from nature, is not to be had, but only a negative reproduced from it?

The yellow varnish—consisting of common negative varnish to which a suitable quantity of aniline yellow has been added until it has assumed a dark sherry color—may be graved very well for a few days; but the older the varnish film the more brittle it becomes, and, therefore, a few drops of castor oil are added to it to render it elastic. The action of light upon sensitive paper placed beneath the negative is effectually suspended by the yellow varnish, so that only the transparent lines, produced by the graver, print. When once the principal lines of the original picture have been faithfully laid down, even an untaught draughtsman may produce an engraving of the portrait that shall at least have some resemblance; while a draughtsman skilled in cross-hatching or a xylographer should furnish a work which, placed beside a good wood cut, should exhibit a superiority recognizable even by the unprofessional eye. Besides the rapidity with which the engraving can be made, the possibility of the utmost correctness is offered, since lines which have been too deeply graved or wrong lines may be filled up again with yellow varnish and engraved anew, a printing frame and silvered paper offering a convenient method of watching and controlling the process of the work.

Where broken lines are desired a pencil may be passed over them, and then they may be pricked and so on. By transfer paper an impression from an engraved, yellow varnished negative plate may be transferred to zinc, and in this way a plate suitable for printing with the letter-press printing press will be produced.

The portrait of Dr. Emil Hornig, the president of the Photographic Society of Vienna, issued with the current number of the *Photographische Correspondenz*, was engraved in about an hour, the faultless zinc cliché being produced in a surprisingly short time, in the chemigraphic establishment of Herren Angerer and Goschel, so that in a single day a negative, the engraving, and the cliché, ready for printing from, may all be produced with ease.

As I never before made a drawing for a wood-cut nor engraved a portrait, I must add that I by no means consider the portrait of my honored friend as a work of art; but my first attempt having attracted some attention in the Vienna Photographic Society, I was induced to prepare the present portrait for its organ. I hope the

process may soon meet with extensive application at the hands of capable artists.—*Fritz Luckhardt, in Photographische Correspondenz.*

A compound is described for the preparation of what are termed safety envelopes. That part of the envelope covered by the flap is treated with a solution of chromic acid, ammonia, sulphuric acid, sulphate of copper, and fine white paper. The flap itself is coated with a solution of isinglass in acetic acid, and when this is moistened and pressed down on the under part of the envelope a solid cement is formed, entirely insoluble in acids, alkalies, hot or cold water, steam, etc.

WM. H. WOGLUM, Mfr., 239 Greenwich St., N. Y.**REGISTERING THERMOMETER.**

A want long felt by meteorological observers has just been supplied by Edmund T. Spitta, L.R.C.P., London, in the shape of a mercurial thermometer which correctly registers the extremes both of heat and cold. The thermometer, when mounted, is about 13 inches long by $3\frac{1}{2}$ inches broad. The bulb is composed of two legs or limbs, and the stem of three. There is a graduated scale on one part of the stem for the *maximum* reading and on another part for the *minimum* reading. The bulb, which is filled with mercury, consists of two limbs of extra thin glass connected by an intermediate bend or elbow, which is strengthened to avoid risk of fracture and also to afford a means of supporting the lower part of the instrument. The limbs of the bulb are about half an inch in sectional diameter; so that, taken as a whole, the instrument is conveniently sensitive. The stem, nearly 30 inches long, is twice bent upon itself, so as to present three parallel portions or limbs—the ascending, the descending, and the second ascending, or compensating. The first, or ascending limb, commences at the bulb, and is continued upwards for about nine inches, when it makes a turn downwards and becomes the descending portion. This is continued to the level of the bulb, from whence it again ascends as the compensating portion; and is carried up as far as the first bend, above which it terminates in a counter-pressure bulb. The ascending limb is graduated for the *maximum* readings and the descending for the *minimum*. The second ascending limb is not graduated, its functions being solely to control the action of the instrument as a compensating agency. The mercury of the bulb, at ordinary temperatures, rises about two inches and a half in the ascending limb. At this point it meets spirit, which is continued round the first bend into the descending limb, to about the level at which it commenced in the ascending. Here mercury is again introduced, filling the lower part of the descending limb, and being continued round the second bend to about half the height of the compensating limb. Above this there is more spirit which fills the rest of the compensating limb, and which partly fills the counter-pressure bulb at its summit.

The registered *maximum* readings are indicated by the height to which the mercury in the ascending limb has pushed an ordinary steel indicator into the spirit above, and the *minimum* readings by the height to which the mercury in the descending limb has pushed up a similar indicator. The peculiar characteristic of the thermometer, in addition to the advantage of its being a registering mercurial *maximum* and *minimum*, is due to the compensating arrangement, by which each limb is caused to act regularly and correctly, and the effect of which may be shown by a simple experiment. If the bulb of the instrument be immersed in water, say at 120 degrees Fahrenheit, the *maximum* side will act nearly correctly, while the *minimum* side will show from four to six degrees of error. If the whole instrument be now immersed, bulb, limbs, and all, the compensating limb and the counter-pressure bulb at once come into play, the ascending and descending limbs are instantly brought into harmonious working, and their indications become absolutely the same.

The instrument has been subjected to a careful examination by Mr. Whipple, at the Royal Observatory at Kew. He states that "its action is highly satisfactory, and that both tubes indicate the temperature to which the instrument is subjected with great accuracy. The arrange-

ment of the counter-pres-ure tube at the back, termed the compensating limb, appears to answer its purpose most efficiently. The instrument will enable meteorologists to register low temperatures without feeling the uncertainty which is always attached to a common Sixe's thermometer or an ordinary alcoholic Rutherford minimum, due to the volatility of the spirit and to its sluggishness of action. The bulb being so constructed as to expose a considerable surface to the air, its indications follow the fluctuations of atmospheric temperature with great rapidity, almost equal to that of an ordinary standard mercurial thermometer."—*Ec.*

IMITATION EBONY.

To turn oak black so as to cause it to resemble ebony, the wood should be immersed for forty-eight hours in a hot saturated solution of alum, then brushed over several times with a logwood decoction, prepared as follows. Boil one part of best logwood with ten parts of water, filter through linen, and evaporate at a gentle heat until the volume is reduced one-half. To every quart of this add from ten to fifteen drops of a saturated solution of indigo, completely neutral. After applying this dye, rub the wood with a saturated and filtered solution of verdigris in hot concentrated acetic acid, and repeat the operation until a black of the desired intensity is obtained.

Neutrality in things good or evil is both odious and prejudicial; but, in matters of an indifferent nature, is safe and commendable.

A FIRST-CLASS Book and Stationery Business FOR SALE.

THE largest Book and Stationery business in a City in Pennsylvania that has a population of forty-five thousand inhabitants, is situated in the midst of a rich mineral and agricultural district, is a large manufacturing city, also a great railroad centre (there being seven different railroads running into the city and another road being surveyed), but four hours' ride from New York and two hours from Philadelphia, is offered for sale at a bargain on account of ill health.

It is centrally located in the best business square in the city, and has been established for more than thirty years—the stock of goods is fresh and clean,—and doing a large wholesale and retail business. The business for the year 1880 amounted to \$20,000.

This is a splendid opening for any person wishing to engage in the above-named business, and will bear a thorough investigation.

For particulars address W. A. R., care of American Stationer, 74 Duane St., New York City, N. Y.

THE "WATER-MARK" IN PAPER.

A recent number of the *Printer's Register*, of London, England, gives the following interesting information in an article condensed from a lecture on "Paper and Paper Making," by Henry Pitman:

One feature of paper remains to be noticed, namely, the "water-mark," the origin of which explains some of the names by which papers are known. In the days when few persons could read, pictures and symbols were commonly used as signs or emblems of employment, such as the harber's "pole," the woolstapler's "fleece," the "checkers," on the tavern and inn signs generally. Every trade had its "trade mark." The new trades of printing and paper making naturally followed the custom by inventing emblems for different makes of paper and the title pages of books. The marks on paper used by the early printers consisted of an ox head and a star, a dog's head and collar, a crown, a shield, a jug, etc. The last mark originated the name of "pot" paper. The picture of a fool's head, with caps and bells, gave the name of "fool's cap," often shortened into "cap" paper. "Post" and "Bath post" are supposed to have originated from the mark of a posthorn. A figure of Britannia or a lion rampant supporting the cap of liberty has replaced the fool's cap and posthorn. The term "Imperial" is supposed to have been derived from the ancient name given to the finest specimens of papyri. Modern water marks are conspicuous on the paper used in printing the *Times*, bank notes, checks, bills and postage stamps. The marks can be seen distinctly when the paper is held up to the light. The commonest marks are the paper maker's name and the date. Ingenious water marks have been contrived as preventives of fraud and forgery. Bank and legal paper is sometimes treated chemically, so that any tampering with the ink can be instantly detected. The Shakespearian forgeries of Ireland and Chatterton's pretended discoveries of old poems would not have imposed so long upon the learned had not cunning been displayed in the use of ancient looking paper. The mode of Ireland's deception is disclosed in his "Confessions." He says: "I discovered that a jug was the prevalent water mark of the reign of Elizabeth, in consequence of which I inspected all the sheets of old paper in my possession, and having selected such as had the jug upon them, I produced the manuscript upon these." Caxton's "Game of the Chess" was printed on paper bearing an old English letter surmounted by a star. This book was reprinted some years ago as a tribute to Caxton's memory, and paper was made expressly for the purpose, imitating the original even to the water mark. An old method of producing the water marks was to fix a strong wire on the gauze of the hand mold in the form of the object to be represented. The numbered water marks on bank of England notes are produced by a more complicated process. Any person who can afford so distinctive a luxury, may have paper made expressly for him, bearing his name, crest or any device in the form of water marks.

FOUR AWARDS!

All of them the Highest Given, at the Australian World's Fair, Melbourne, 1880-81

THREE AWARDS OF FIRST DEGREE OF MERIT—for Copying,
Black and Colored Inks, respectively.

ONE AWARD OF THIRD DEGREE OF MERIT—for Mucilage.
This last, although of the Third Degree, was the Highest and **ONLY**
Award made for Mucilage.

No other American Inks received a higher award than the Third Degree of Merit.

CARTER, DINSMORE & CO., Boston and New York.

BYRON WESTON

DALTON,

DISTRICT of
COLUMBIA
Library of U S Pat-
ents Office X A.,

HAS BEEN AWARDED THE

GRAND PRIZE GOLD MEDAL

AND RECOMMENDED THE

Medal of Honor and Perfection

At PARIS, 1878,

This being the **HIGHEST** and **ONLY** AWARD given for

LINEN RECORD & LEDGER PAPER.

—A SPECIALTY.—

THIS Paper has received THE HIGHEST PREMIUM over all
others from the Cincinnati Industrial Exhibition, Massachusetts
Charitable Mechanics' Association, Franklin Institute of Philadelphia,
Louisville Exposition, Medal and diploma from United States Centennial
Commission, Medal of Progress American Institute, 1877, and Medal of
Improvement and Progress, Boston, 1878. Its

PRINCIPAL ADVANTAGES

are as follows:—1. It contains more LINEN than any other Ledger
Paper, has a longer fibre, and is, consequently, tougher. 2. Having a
harder and better body, it frays less in erasure, so that by simply using
the rubber after the eraser, the ink is prevented from spreading. 3. It is
more uniform in Weight Color and Finish. 4. It never cockles if properly
bound. 5. Its chemical action upon ink is such that it both writes and rules
up better. For proof of the foregoing, refer to a large number of Sta-
tioners, Bookbinders, Bookkeepers, and Recorders, who have given it,
after a severe test, the preference over all others. This paper is *Double*
Sized, and will stand any climate or the most acid of fluid inks.

Send for sample sheet, **ERASE** and **REWRITE FOUR TIMES** on same spot,
Each sheet is water-marked with name and date.

"The Stationer"—Every Thursday—\$2.00 Per Annum.

VOL. X.—NO. 6.

NEW YORK, AUGUST 11, 1881.

WHOLE NO. 320.

Correspondence.

BALTIMORE NOTES.

[FROM OUR REGULAR CORRESPONDENT.]

BALTIMORE, Md., August 9, 1881.

The book and stationery trade has brightened up since I last wrote you, and a good free business in all branches is expected. Guggenheimer & Weil, W. L. Stork & Co., and others say that trade has opened as satisfactory as could be expected. The school book and school stationery business with Cushings & Bailey, John B. Piet, W. J. C. Dulaney & Co., J. W. Bond & Co., J. H. Medairy & Co., and the rest of the book trade are much pleased at the manner in which the schools and academies are sending in their orders for the fall supplies.

Many members of the trade are still out of town on vacation, among them being John B. Piet, Sr., who, with his wife, is enjoying the sea bathing at Ocean City.

The well known traveler of Daniel Slote & Co., Harry Phillips, is in town, with a full line of the house's goods (blank books), and pushing the Mark Twain scrapbook. Many new designs have been added to the line; for the Mark Twain is well liked in Baltimore and is used in almost every counting room and household.

Among the representatives of the trade who have been here the past few days are Will Kurtz, of J. B. Lippincott & Co., Philadelphia; Walter Baldwin, of Baker, Pratt & Co., New York; Z. A. Devoll, of the Nescocahague Manufacturing Company, Philadelphia; Chas. Small, of B. Lawrence & Co., New York; W. C. Horn, of Koch, Sons & Co., New York; George A. Roberts, of Charles J. Cohen, Philadelphia; Samuel M. Simons, of Charles H. Sherman & Co., Philadelphia, and Messrs. Owen, of Wirth Brothers & Owen; H. Birrell, Jr., of Iverson, Blakeman, Taylor & Co.; J. H. Hamburger, and a representative of Hard & Parsons, all of New York. The last named gentleman had a full line of samples of new and novel designs for box papers. They are considered the finest exhibited in the Baltimore market this season.

W. P. M.

CHICAGO NOTES.

[FROM OUR REGULAR CORRESPONDENT.]

WESTERN OFFICE LOCKWOOD PRESS, 8 LAKESIDE BUILDING, CHICAGO, ILL., August 6, 1881.

After a week of almost intolerable heat, during which the fishes came boiled from the lake and the cattle came roasted from the stock yards, capricious Æolus has given at last another turn to the weather vane, and as I write

a refreshing breeze from the cool lakes of Manitoba fans my brow and flutters the pages of this manuscript.

As I say, it has been hot—so hot, indeed, that the lake warped, and in such a state of affairs, of course, but little business has been doing; but we hope that this is the end of "dog days," and that trade will soon take its anticipated start.

But, hot weather, you see, does not interrupt mental pursuits, so I have several new books to notice. Martindale's "Commercial and Legal Guide," cloth, 4to, is the twenty-seventh semi-annual edition of a justly esteemed book of reference. The author, J. B. Martindale, himself an experienced attorney, founder of the Martindale Law Association, and author of the large legal directory, which bears his name, has given in this book a valuable aid to the business men of the country. The plan is simple and complete, giving in round numbers the population of every town containing over five hundred inhabitants in the United States, with the name of a prominent lawyer and a responsible bank; giving also lines of transportation, post office, telegraph, express—in fact every manner of information desirable to business men. Price, \$2. "Secret Power," by D. L. Moody; "Twelve Select Sermons," D. L. Moody, 12mo, neatly bound, cloth, 60 cents each, paper, 30 cents each; "Ruth, the Moabitess," Henry Moorhouse, 16mo, flexible cloth, 40 cents, paper, 20 cents; "Symbols and System in Bible Reading," by Rev. W. F. Crafts, second edition, paper, published by F. H. Revell.

E. P. Donnell & Co., 182 Monroe street, have just issued a complete catalogue of bookbinders' and paper box makers' tools, machinery and materials, including their own manufactures and others supplied by them. They claim this to be the first complete price list of the kind ever published in this country.

S. S. Scott, Western agent for the MacKinnon Pen Company, reports sales to his New Orleans agent of 100 pens on May 1, 75 on August 1, and an order for 175 additional, to be delivered on September 1. The success of the pen at that point is due principally to the efforts of Mr. Scott himself, who sold 400 pens at retail in that city during the four months he was located there. The pen must be a good thing or it would not sell in the South during the summer, when it is "duller than a Dutch brickbat."

H. A. Unz, my genial-faced friend who does the honors here for Remington's type writer department, has just returned from a two weeks' visit to the factory, with face flushed from the "kisses of the ardent sun," and better natured than ever.

It is difficult at this late day to invent anything new in the way of advertising cards; but Chas. H. Knapp & Co., 70 State street, have succeeded in producing not only a novelty, but a cheap as well as tasteful one. The cards, while not more expensive than the ordinary chromo cards, have all the effect of a finely finished photo, and as they are copies of celebrated figure and other paintings, will be admired by all and ought to sell everywhere. Their advertisement appears in these columns.

Mr. Adams, of Adams & Kimball, will not be able to take the road until his hair grows again. Some mysterious freak of law, nature or necessity, deprived him while East of that manly covering, so that he will have to await a new crop before venturing into Joliet and other country towns.

The United States Ticket and Tablet Company has just issued a neat book containing a full line of its fancy cut cards in all shapes and designs, from leaves to fishes. It will be sent on receipt of fifty cents. As these cards sell well wherever exhibited, stationers and printers will do well to send for the sample book and keep it on their desks.

G. B. H.

OHIO NOTES.

[FROM OUR REGULAR CORRESPONDENT.]

DAYTON, O., August 8, 1881.

A fall of 20° in the thermometer has made life worth living again and given a little energy to meet the rush of business.

The fall trade is fairly on now and promises to be fairly large. Among goods selling well are the better grades of photograph and autograph albums. The demand for better goods in these lines increases every year. I think it about time that, at least, the better grades should be made in this country, and home industry encouraged to that extent. I believe that enterprising manufacturers can make money now in the business, and that better goods than the German albums can be made at the same price in America.

Among new enterprises in our city is the blank book factory of Kipp & Hamrock. They were both formerly in the employ of Reynolds & Reynolds, and in their new venture on their own account will make a somewhat similar line of goods.

The United Brethren establishment is doubling up the size of its retail store, and when all of its improvements are done it will have the finest room for display of stationery and books in the city.

The commercial travelers are not very numerous. Beach, of the New York Blank Book

Company, was here the other day; Franklin Hill, of the Chapin Paper Company, also put in an appearance; both report a good trade.

Dealers in the West have been notified of the advance in envelopes, but do not take very much stock in prices being maintained. There are too many back orders at old figures.

The Mead Paper Company shut down its mills this week to make extensive alterations in its property. It expects to make 15,000 pounds of paper daily, when it starts up.

Geo. H. Friend & Son, at Carrollton, this county, are partially stopped by the bursting of one of their rotary bleachers, but will soon get in full headway again.

At Middletown the two manilla mills of A. Hill & Sons are stopped awaiting the action of the creditors. This large decrease in manufacture, is making manilla paper scarce in this market. It is expected that arrangements will speedily be made, by which both mills will start up again.

The Dayton Journal expects in a few months to occupy its new quarters that are rapidly approaching completion. It will have much better facilities for job work than in the old.

Refreshing rains have added much to the comforts of living throughout the

MIAMI VALLEY.

MONTREAL NOTES.

[FROM OUR OWN CORRESPONDENT.]

MONTREAL, P. Q., August 8, 1881.

The general fall trade is commencing and there have been quite a number of drummers here during the past week, and some of the members of the trade are taking their much needed vacation.

George Bishop, the well known lithographer, has been lately compelled by pressure of business to erect a large three-story building in the rear of his present place, and is doing a rushing business at present.

J. T. Henderson is very busy at present getting ready his samples of Xmas cards for the jobbing trade. He has already large orders from the leading houses in the Dominion, and will place them with leading dealers in the States. As I have seen the outlines I can only say they are new and novel in design, while the designs are such that they will only have to be shown to insure large sales. The designs represent leading Canadian scenes, true to nature, and all are mounted in the best manner.

J. L. Gurd reports business very fair, and as he does a large business in American paperies, he has a steady run.

The very warm weather of the past week has been felt here, and nobody seems to exert himself any more than is necessary; but the American tourists, who arrive here now daily in large numbers and "do" the city in a day or less, are not purchasing as much as usual, for they find now there is not so much difference in prices as there was a few years since.

Advertising city notices in daily papers is cheap here, for the corporation only pays three cents a line, and I hardly think the papers in New York would care for the job.

The government organs, having denied repeatedly that the letters were written to Woolworth & Graham, now deny that the mail bags belonging to "Uncle Sam" are ever used in the Dominion, and there is likely to be quite a dispute over the ownership, although I have heard through good authority that mails are very often shipped from some cities in this province to other cities here in American bags.

Samuel Hano, of Boston, was at the Windsor

on Sunday and went to Chicago. He reports business first class, and is daily receiving large orders for his manifold books. F. H. R.

THE FIRST BIBLE PRINTED IN AMERICA.

Philadelphia has a reputation for publishing Bibles, and that it is not newly acquired is shown from the following statement: The Philadelphia Ledger, of August 1, says that a representative of the Ledger was on Saturday shown a copy of the first Bible printed in English in America. It is a rare book, much sought by bibliographers. The British Museum recently offered \$900 for a copy, and finally succeeded in obtaining one. This old book is printed in brevier type, is contained in two small duodecimo volumes, bound in calf, and bears the imprint of 1782. There is not a trace of John Bull about it. The title page bears the coat of arms of Pennsylvania, and at the foot of the page the reader is informed that it was "Printed and sold by R. Aitken, at Pope's Head, three doors above the Coffee House, in Market street, 1782."

Robert Aitken was a Philadelphia printer, who flourished during Revolutionary times. He was born in Scotland, and learned the trade of bookbinding in Edinburgh. He was a thrifty, industrious and enterprising man. He arrived in this city in 1769, and published many books, both before and after the Revolution. In 1775 he published the *American Magazine*, and, among other publications made by him, were the "Transactions of the American Philosophical Society," in three quarto volumes. Aitken died in 1802, and his daughter, Jane Aitken, continued the printing business after his death. Three of his great-granddaughters are still living in Philadelphia.

His most ambitious production was the publication of the Bible referred to, and it is said that there was not such a demand for the edition as was anticipated, and the venture was not a successful one in a pecuniary sense. Printed as an introduction to the book is a statement giving a brief history of the publication. It was first suggested by Aitken in a memorial by him to Congress, dated January 21, 1781. The memorial was referred to a committee, of which James Duane was chairman. In 1782, the committee reported, saying that Mr. Aitken had, at great "expence," now finished an American edition of the Holy Scriptures in English, and they commended it to the attention of the two chaplains in Congress, the Rev. Dr. White and the Rev. Mr. Duffield. Upon examination the chaplains reported that, having "selected and examined a variety of passages throughout the work, we are of opinion that it is executed with great accuracy as to the sense, and with as few grammatical and typographical errors as could be expected in an undertaking of such magnitude." They expressed the hope that the publication would "prove as advantageous as it is honorable to the gentleman who has exerted himself to furnish it at the evident risque of private fortune." In consequence of this flattering estimate, Congress passed a resolution approving the pious and laudable undertaking of Mr. Aitken, recommending the edition to the inhabitants of the United States.

Among other publications made by Aitken, which are now exceedingly scarce, was "Aitken's General American Register and the Gentlemen's and Tradesmen's Complete Annual Account Book and Calendar, for the pocket or desk, for the year of our Lord 1773." The copy of this production, in the hands of the same gentleman who has possession of the Bible, exhibits

a faded and battered specimen of the olden-time books, bound in calf, with a flap on the cover to protect the edges. It is a combination of a diary and a latter-day newspaper almanac. It contains the changes of the moon, the time of the rising and the setting of the sun, appearance of the planets, &c. A list of the Mayors, Record-ers, Aldermen, and Common Councilmen is given, together with a table of the Kings and Queens of England, House of Peers, and the reigning monarchs of Europe. The military and civil list in America is also noted, and is followed by a statement of the various customhouse and post office officials here at the time. Silk culture had evidently engaged the attention of people in these days, for it is learned from this old book that a Society for Promoting the Culture of Silk then existed; that £1,000 was raised by subscription, and an additional £1,000 was voted by the Assembly of the Province. It is stated that "since the establishment of the filature near 400 pounds of silk have been reeled from purchased cocoons, besides large quantities reeled for individuals, and the silk thus reeled and sent home has been declared as good in quality as any that come to the London market, and brought the price accordingly."

ABOUT A FAN.

Clara Belle, writing from Saratoga to the Cincinnati Enquirer, says: "An interesting story of a fan is told here, and the heroine, the fan, a pair of stockings, and an artist—the persons and properties of the narrative—are pointed out at one of the hotels in corroboration. It is now fashionable for the society girl to knit fancy hose (the new kink is to say "hosen") for her own wear, putting a vast amount of skill, work and costly material into the dainty productions. The heroine is clever at this sort of thing. She spent two weeks making a pair of stockings out of light pink and blue satin thread, with all sorts of intricate meshes done with all sorts of crochet and knitting needles, and a wealth of the finest gold thread embroidery. They were the wonder and envy of her set while in process of construction. The processes and progress were watched with great interest, not only by the girl's friends in her own set, but by the few men who were privileged with an insight. Malicious rivals whispered that she would wear the heels in the hollow of the foot, because the feet of the stockings were far shorter than her own; and that, though they were too small in the feet, there was a waste of space in the calves. Well, the wondrous stockings were at length completed, and the proud belle wore them of an afternoon. The parlors and verandahs of her hotel are furnished with willow foot-rests, which are rather high for modesty, yet are used quite commonly. On one of these she placed her gorgeously caparisoned feet. Her slippers were so low and her skirts so high that a fair sample of each stocking was in view. While thus exhibiting them an enamored artist came along. She shrewdly complained of the heat, and fell to fanning her feet and ankles. That, by the way, is one of the newest Saratoga mannerisms.

"To cool feet so beautifully dressed as those," said the artist, "you should have a finer fan than that shabby one."

"Then paint me a suitable one," she replied.

He did; and now, with satin on her feet and an original painted fan in her hands, she lounges with immense success.

The greater the difficulty the more glory in surmounting it; skillful pilots gain their reputation from storms and tempests.

OLD BERKSHIRE MILLS

DALTON, MASS., U. S. A.

One party writes: "The two hundred RECORD BOOKS, for 83 of the 99 Counties, now on exhibition at the Iowa State Fair, at Des Moines; and all, but four (!) of them, made from your 'OLD BERKSHIRE MILLS LINEN LEDGER,' Medium, 40th., make a splendid show."

[The above cut is a fac-simile of the wrapper used on the Linen Ledger Paper.]

We will pay for any book rejected on account of fault in the paper. Send for Samples, test them in comparison, and see that your books are made from paper thus water-marked.

L. PRANG & CO.'S

Christmas and New Year Cards

ANNOUNCEMENT.

WE hereby beg leave to announce to the trade the completion of our line of Christmas and New Year Cards for this season, for which our agents are now soliciting orders. The extent of our list, the originality, and especially the American character of our designs, together with the great care taken in their execution, will, we have no doubt, secure for our goods the popularity which they have enjoyed heretofore. The efforts we have made to secure the highest excellence, is attested by the names of some of the artists whose designs have been reproduced. We would only name Elihu Vedder, C. C. Coleman, Thomas Moran, Miss Rosina Emmett, Miss Dora Wheeler, Mrs. O. E. Whitney, W. H. Gibson, F. S. Church, R. G. Birch, &c. That a due regard has been paid for the quality of the literary matter, in connection with these designs, is shown by the fact that many of the designs are accompanied by original poems from writers of note, such as Mrs. Celia Thaxter and Mrs. Emily Shaw Forman.

The great increase of our manufacturing facilities, secured by additions to our building nearly doubling our floor space and by the adding of new machinery, will place us in a position to fill orders promptly. Still we would request dealers to place their orders as early as possible, so as to still further enable us to make timely preparation for prompt deliveries.

Our Cards will, as heretofore, be put up in envelopes containing twelve Cards, unless otherwise stated on our price lists.

We furnish envelopes without extra charge for all our Christmas and New Year Cards, for which the list price is \$1.80 per set, and over. Our silk-fringed Cards will no doubt be in great demand this season. We have made ample preparation to furnish these in time and have made arrangements with our manufacturers for the best quality of silk fringes. We would call special attention to the excellence of our fringed Cards and the novelties in colors and style of fringes we offer for this season.

A marked and attractive feature of our cards are the elegantly ornamented backs.

All our fringed Christmas and New Year Cards are furnished with envelopes and protectors, so as to insure safe transportation in the mails.

It will be impossible to embody our whole list in the space of the advertisement, and we will therefore merely give a general outline of the variety offered.

PRANG'S PRIZE CHRISTMAS CARDS. COMPETITION OF 1881.

These are the Cards selected by the judges in the second competition for four designs of Christmas Cards, for which we offered \$2,000 in prizes of \$1,000, \$500, \$300 and \$200 respectively. At the recommendation of the judges, Messrs. COLEMAN, LAFARGE, and WHITE, the prize for third best Card was increased to \$500. Mrs. CELIA THAXTER has written appropriate verses for each of the designs.

- 1st Prize Card (\$1,000), by Elihu Vedder. Size, $6\frac{1}{4} \times 9$ inches; price \$1 each. Same card with silk fringe, cord and tassels, price \$1.50 each.
 2d Prize Card (\$500), by Miss Dora Wheeler. Size, 7×9 inches; price 75c. each. Same card with silk fringe, cord and tassels, price \$1.25 each.
 3d Prize Card (\$500), by C. C. Coleman. Size, 7×9 inches; price 75c. each. Same card with silk fringe, cord and tassels, price \$1.25 each.
 4th Prize Card (\$200), by Miss Rosina Emmett. Size, $5\frac{1}{4} \times 9\frac{1}{4}$ inches; price 60c. each. Same card with silk fringe, cord and tassels, price \$1 each.

The Prize Cards can also be had mounted on heavy board with gilt beveled edges.

We beg to call attention also to the following publications for New Year and Christmas:

"Goddess Fortune" New Year Card, by Elihu Vedder. Size, $6\frac{1}{4} \times 8\frac{3}{4}$ inches; price 75c. each. Same card with silk fringe, cord and tassels, price \$1.25 each.
 "Christmas Dove." Size, $7 \times 9\frac{1}{2}$. This card is in the same style as the success of the last Easter season, the "Easter Dove" Price 60c. each. Same card with silk fringe, cord and tassels, price \$1 each.

Our Regular Line of Christmas Cards consists, among others, of the following Series:

- | | |
|---|--|
| Nos. 901, 902, 903, 906, 909, 910. Floral designs ranging in price from 20c. to \$1.20 per set of 12. | Nos. 920 and 929. Children's designs, at \$2.40 and \$3.60 per set. |
| Nos. 904, 905. Humorous Cat and Frog Designs, 60c. per set. | No. 922. Shells of Ocean, with figures, \$2.40 per set. |
| No. 907 is a new series of Horseshoe designs, 75c. per set. | No. 924. Fans with silk fringes, \$3 per set. |
| | No. 933. Bric-à-Brac designs, very rich, \$6 per set, and many others. |

We offer a similar assortment of New Year Cards, but would call special attention to No. 1320, a new folding calendar, at \$2.40 per set. Most of the Numbers can be had with silk fringes ranging in price from \$2.25 to \$12 per set. Stock will be ready for delivery September 15.

Besides the above, attention is called to our New Birthday Cards, Scripture Texts Cards, New Panels, New Water Colors, by Thomas Moran, and other publications. Our line of Thanksgiving Day Cards will also be shown by our agents.

REGULAR DISCOUNT TO THE TRADE. PRICE LISTS AND CATALOGUES SENT ON APPLICATION.

Just Out! Something Entirely New. BIRTH ANNOUNCEMENT CARDS. To be used by parents to announce the birth of a child to their friends.

EXACT SIZE OF NEW "SOVEREIGN" PEN CLOSED FOR THE POCKET.

The new "Sovereign" is the most popular Pen made, having greater strength, greater ink capacity, and is more convenient for the pocket, than any now in use. The Manufacturers guarantee to keep every "Mackinnon" in good working order for three years, and if the point shows any sign of wear in that time to repoint it free of charge. Each Pen in handsome Morocco Case, with filler and directions complete.

MARCUS WARD & CO!

Invite the attention of the trade to their new

Christmas and New Year Cards and Calendars for 1881-82,

— WHICH ARE NOW READY, —

And Sample Books are in the hands of their Travelers, who will have pleasure in booking orders.

IN design, variety, and appropriateness, they greatly excel those of former seasons, for Marcus Ward & Co. have long recognized the fact that intrinsic merit alone can insure the increase and permanent success of high-class productions. To this end artists of acknowledged talent and mechanical skill of the highest order only are employed. An inspection of samples will convince the trade that, in the production of these beautiful souvenirs, they continue to be the leaders.

Orders should be placed early to insure timely delivery. All communications should be addressed

MARCUS WARD & CO., 611 and 613 Chestnut St., Phila.

ALFRED IRELAND, Manager.

Trade Novelties.

[We will be glad to receive samples of all novelties issued in the trade, and will notice all such which possess merit free of charge. It is desirable to accompany descriptions with cuts whenever possible.]

UNIVERSAL TRICYCLE.

The cut illustrates what is known as the new universal tricycle for girls and boys. This is a new patented girls' and boys' velocipede, and is said to have the simplest and most effective motive power ever applied. Girls from six to sixteen years can ride them with little effort. They are made strong, durable and highly finished. The best quality of malleable iron is used, and all parts and connections are handsomely turned and finished. The wheels are of best quality; the woodwork is highly painted, striped and varnished. The seat is upholstered with fancy colored enameled cloth, with a finished seat rail. A feature of the machine is the reversible handle, which can be used to steer or draw with. A parasol top can be applied to the machine if desired. It is made in four sizes, Nos. 1, 2, 3 and 4. Lyman & Curtis, New York, are the agents.

NEW PATENTS.

No. 244,690. Hammock.—Vincent P. Travers, New York, N. Y.

No. 244,721. Type Distributing Machine.—Louis K. Johnson, New York, N. Y., assignor, by mesne assignment, to Edward N. Dickerson, trustee.

No. 244,722. Pocket Book and Purse.—Lorenz Knittel, Offenbach, Hesse, Germany. Patented in Germany December 22, 1880.

No. 244,723. Machine for Arranging Type in Lines.—William A. Lorenz, Brooklyn, and Louis K. Johnson, New York, N. Y., assignors, by mesne assignment, to Edward N. Dickerson, trustee.

No. 244,724. Carrier for Type-Distributing Machines.—William A. Lorenz, Brooklyn, N. Y., Edward G. Parkhurst, Hartford, Conn., and Louis K. Johnson, New York, N. Y.

No. 244,725. Type-Distributing Machine.—William A. Lorenz, Brooklyn, and Louis K. Johnson, New York, N. Y.

No. 244,979. Perforator for Printing-Presses.—John J. Clause, Chicago, Ill.

No. 244,980. Folding Machine.—John J. Clause, Chicago, Ill.

No. 244,981. Sheet Delivery Apparatus.—John J. Clause, Chicago, Ill.

No. 245,008.—Paper-Cutting Machine.—Leonard W. Morse, Jr., Mystic River, Conn.

No. 245,014.—Printing-Press.—George W. Prouty, Boston, Mass., assignor to the Prouty Press Company, Hartford, Conn.

In combination with the platen and bed of a printing-press, an operating crank, a toothed segment provided with a wedge or cam shaped projection, a suitable pitman connecting the segment to the operating crank, a second toothed segment provided with a radial arm carrying a wrist pin and with an anti-friction roll adapted to engage at proper times with the wedge or cam

shaped projection, and a draw bar connecting the wrist pin with the platen.

No. 245,043. Moist Pad and Paper Weight.—Edwin W. Archer, Boston, and Daniel B. Fessenden, Everett, Mass.

No. 245,064. Stereotype Block.—Joseph P. Ellacott and Frederick K. Tracy, Chicago, Ill.

An improved stereotype block having double rows of cavities, and arranged so that the ends of the cavities in one row will overreach or break joints with the ends of the cavities in the other row.

No. 245,065. Writing Desk Attachment to other Furniture.—Samuel M. Furman, Henderson, Ky.

UNIVERSAL TRICYCLE.

No. 245,127. Toy Safe.—John H. Brown, New York, N. Y.

A toy money box provided with a registering mechanism, whereby the number of coin introduced into the box can be registered and indicated.

No. 245,141. Toy or Spinning Top.—Max Dannhorn, Nuremberg, Germany.

In a toy, the combination of a swivel case or shell adapted to be rotated and having an open top, and a central spindle which is longitudinally movable, a doll or image fitting upon the spindle, a spring for imparting an upward movement to the doll or image, and a catch for holding the latter within the case or shell and adapted to be released by the upward movement of the spindle.

No. 245,157. Cribbage Board.—William E. Good-enough, Newark, N. J.

A cribbage board composed essentially of two side sections or blocks provided with a double row of axial-working marking-pins or counters arranged in groups, and a central section or block provided with end axial working pins to mark the termination of the game, and axial working pins to designate the number of games played.

No. 245,161. Printing-Press.—John E. Grumbach, Jersey City, N. J.

No. 245,164. Machine for Metallizing Electrotype Molds.—Charles H. Hanson, Philadelphia, Pa.

In a metallizing machine, the combination of an air tight case, rotating perforated table,

vibrating brushes, and mechanism for operating the table and brushes.

No. 245,173. Sheet Delivery Apparatus.—Gustav L. Jaeger, New York, N. Y.

No. 245,186. Scissors.—Boyd Lowe, Nashville, Tenn., assignor of three-fourths to Everett B. Bigley, Edward B. Bigley, and Francis L. Ezell, all of same place.

No. 245,208. Pocket Toilet Case.—Jesse B. Noyes, Chicago, Ill., assignor to the Western Leather Manufacturing Company, same place.

No. 245,220. Numbering Machine.—William Robinson, Washington, D. C.

In a numbering head, the combination, with the bar or spindle and rotating mechanism, of a series of rotating disks having the usual series of figures, from 0 to 9, inclusive, arranged at equal intervals and (except the unit disk) a dash line or other stamping character intermediate between figures 1 and 0, whereby the disk may print the figures *seriatim* without regard to the dash, but when set by hand on the half notch will print the dash or other stamping character.

No. 245,250. Combined Pencil Case, Sharpener, and Eraser.—George S. Williams, Greenwich, Conn.

The combination of a pencil case, a pencil sharpener projecting from such case at its upper end, a detachable eraser case having its lower end fitted to the upper portion of the pencil case and having the eraser inserted in its upper end.

No. 245,257. Pen and Pencil Holder.—Joseph H. Wright, New York, N. Y.

A pencil holder consisting of a cylinder, provided with a

tubular extension for reception of the pencil and adapted for attachment to a desk, and a spring reel contained in the cylinder and having a cord attached.

TRADE MARK.

No. 8,494. Lead Pencils.—Eberhard Faber, Port Richmond, N. Y.

"The arbitrarily selected letters and word 'Siberian.'"

LABEL.

No. 2,504. Title: "Whitmore's Elegant Stationery."—James D. Whitmore & Co., New York, N. Y.

TOOTHPICK.

Fred G. Hagan & Co., Providence, R. I., have produced a new thing in toothpicks which is both neat and convenient. It is a rolled gold plate case working on the same principle as a gold pencil, quills, cut and formed in a narrow shaped blade, taking the place of the leads and fitting in a slitted tip, which is nickel-plated. The pick can thus be slid out for use or retired when not wanted. When the quill becomes useless or it is desired to change it, by unscrewing a cap near the nickel tip the chuck holding the quill is loosened. Taking out the quill it will be found double pointed; this permits of reversing it and using the other point after the first has served its purpose. At the other end of the case is a cap which, when unscrewed and removed, shows a receptacle holding five more double quills. Thus the toothpick, complete in itself, contains the equivalent of a dozen quills in a case, which, when shut, is smaller than an ordinary quill for pocket use.

"ECONOMY" LETTER AND BILL FILE.

The cut represents what is asserted to be the most perfect article of its kind ever manufactured. It is free from mechanism, and cannot get out of order. Its qualities of cheapness, strength, utility, simplicity of construction, and manner of operating, make it useful for every counting-room and office. The solid lines in the cut represent the file closed and the dotted lines illustrate it open. In operating, the wires are pushed back with either hand on either side. Any letter can be easily read on either side without removing, or can be removed without displacing any of the others. Lucien Sanderson & Co., Boston, are the manufacturers.

ODOR AND JEWEL CASES.

E. & H. T. Anthony & Co. have just introduced novelties in the line of odor cases, toilet cases, and jewel cases, and also combinations of the latter two articles. They are made either of plush, brocade, velvet, or in mixtures of these goods. The designs are all new, excellently gotten up, and evince great taste on behalf of the designer. The accompanying cuts illustrate two of these novelties. No. 1 is an odor case and No. 2 a jewel case.

DECORATIVE CUT-METAL WORK.

The perforating of metal for decorative, ecclesiastical, and domestic purposes, by means of a machine saw, is one of the curiosities of Parisian industry. The achievements of the small steel instrument working through dense sheets of metal, one piled on top of another, have been compared by a French critic to the easy action of a knife cutting through a roll of butter. Almost as extraordinary as the facility with which a block of iron, a plate of copper, brass or steel is ornamented, are the numerous designs and purposes to which metal is applied. There appears to be nothing required, from a memorial brass to a palace gate, from a door panel to a magnificent Gothic window, from a Renaissance jewel box to a fender, that the wonderful little instrument cannot turn out. Some of the smallest articles, such as monograms, can be manufactured almost as minutely as hair-work, and there are branches of flowers for the decoration of plush boxes. Architects have found this remarkable saw a valuable ally in the decoration of modern residences; the whole façade of the Gymnase Theatre, which has been completely restored, is ornamented with gilt iron, undertaken by the Société Française, of which Madame Delong is the leader and indefatigable manager. That a woman should have given the first impulse to such masculine work, and that she should have improved it in silence until the Paris Exposition of 1878 brought to light her kiosk, displaying all the different decorative applications of cut-metal work, is a fact of which women may be proud.

One of the branches to the perfection of which much care and time have been bestowed by the Société Française is the coloring of cut-out metal work. It is totally distinct from the polished and engraved metal, of which beautiful specimens are exhibited, revealing a lightness and delicacy that contrast with the solidity of other branches. Colored metal work decorates cornices, ceilings, &c., representing griffins, arabesques, chimere, and any style of ornamenta-

tion which the taste of the day decrees. The shading is so minute that when any of these colored designs are attached, like appliqué needle-work, to a groundwork of velvet, the visitor naturally supposes this intricate fretwork is merely painting, never suspecting the presence of metal.

Among the latest and most admired achievements of the Rue Bayen Works (Thernes), are two stained windows representing exotic foliage covered with beautiful metal work, and among

**"ECONOMY" LETTER AND BILL FILE.**

the most fanciful is a Christmas tree entirely of copper, the branches being Gothic figures that reproduce cathedral sculpture, and which, being pierced with small holes, can hold all the golden

**No. 1.**

fruit of the Hesperides. The extreme end of each branch is the head of an apocryphal bird or animal dear to builders of the thirteenth or fourteenth century. Among the most important

**No. 2.**

public works executed for the city of Paris are the entrance door of the memorial monument of Bourget, the communion rails and chapel gate of St. Ambroise church, the communion rails of St. Vincent de Paul, the rosaces and other decorative metal work at the Gymnase; while private orders of a no less sumptuous nature have been executed for the residences of the Rothschilds; for the late M. Menier's house in the Park Monceau, principally the Byzantine oratory; for the Louvre, a large dry goods establishment; for M. Coissier, the confectioner, and for the Paris residence of the ex-queen of Spain.

PAINT FOR "OVERLAYS."

A Russian photographer, Gospodinu Ré, who also practices zincography and heliography with success, has been printing the zincographic reproductions of his camera on a letter press, and publishes the result of his experience in the Russian *Review of the Graphic Arts*. He found in the process of making ready that the finest and thinnest of tissue paper often proved too strong, especially in bringing up middle tints. In looking

about for a means of obviating the difficulty, the thought struck him that, where paper was too thick, a thin coat of paint would be suitable, and he forthwith proceeded to "paint" his "overlays." The making ready, hard packing only being used, is proceeded with in the usual manner up to the finer touches, when the painting commences. The special ink or color used for this purpose consists of English red (*caput mortuum*) dissolved in water and well

ground on the grinding stone, to which a little glue is added—too much glue makes the color too stiff, while too little does not give a good stroke of the brush. The proper state for use is when it does not shine when painted out and dry; it must flow easily from the brush, and be of such a consistency that the layer when dry does not exceed in thickness a fine film. After proceeding as far as possible with the paper overlays, the paint is placed on the last impression in the same way, beginning with the dark and heavy parts that want more deepening, one layer of color on another as soon as the first is sufficiently dry, the light parts being then treated in the same manner. For very fine work or shallow "process" plates this method has distinct advantages, as the slightest amount of overlay can be put on with the brush, and the paint when dry does not cause the fine lines of an engraving to look broken and thick, as paper overlays too frequently do. The overlay-ink when once mixed may be kept dry in a saucer, simply wetting the brush before using.

IMITATION GROUND GLASS.—The following is said to give satisfaction: Sandarac, 90 grains; mastic, 20 grains; washed ether, 2 ounces; coal tar benzine, 4 to 12 drachms. Dissolve the rosins in ether, which must be well washed to remove all traces of alcohol, and add to it, in small quantities at a time, sufficient benzine to make it dry with a suitable grain. Too little of it leaves the varnish too transparent, and an excess renders it crapy. The quantity depends on its quality, but the best results are obtained from a medium grade of benzine.

Take common pine tables, and cover the tops and legs with stamped velveteen. This is much the fashion now, and looks ornamental. Choose a color that harmonizes well with the rest of the room. Another suggestion for pine tables is to paint the legs black, put on a loose cloth, falling long, and gather the corners together fan-like, with large satin bows. This drawing of the corners together makes the cloth tight fitting. Make the blotters to match, and, if possible, the envelope cases; but this requires a professional hand. Painted satin or stamped velveteen both look well for blotter and case. Plush is also much used. Cretonne would be most suitable, however, for bedrooms. The crettonne should be a well covered one. Crêpe cloth is a suitable material.

NEW AND SEASONABLE GOODS.

THE ACME STATIONERY AND PAPER CO.,

No. 117 Fulton and 52 Ann Street, New York,

MANUFACTURERS OF FINE WHITE AND MANILA WRITING PAPERS IN

PADS, TABLETS AND PORTFOLIOS,

Are now offering, for the Coming Season's School Trade, an extensive line of *SCHOOL EXERCISE BOOKS* in 14 different sizes and styles; made from *White and Manila Writing Paper* in *plain and fancy ruling*; bound in *Press Board and Rope Paper Covers*; with round corners, and in every respect the best line of these goods now in the market.

COMPOSITION BOOKS.

(Copyrighted, June, 1881.)

Something entirely new and attractive for the School Trade. One of the best selling books published. They are printed on our best manila paper, bound in heavy covers with rounded corners. At the head of each page is printed a cut of some simple subject for the children to write about. The name, "*Pretty Stories*," will cause almost every child to want it. The book is recommended by the best primary teachers in the country. FIRST SERIES, 6½ × 8 inches, 24 pages, per 100 books, \$8.00. Put up in packages of 25 books each.

We have added to our *Portfolio Tablets* a line of *Fine Linen Paper*, bound in Leatherette, with stamped covers, very handsome; and also are putting up a new style of Tablet in *Fine White Writing Paper*, bound in ornamental flexible covers, with stiff back, which we call our "*TOURISTS' TABLETS*," in Commercial and Packet Note, and Congress Letter Sizes.

The Chicago & Northwestern Railway

Is the **OLDEST**! **BEST**! **CONSTRUCTED**! **BEST**! **EQUIPPED**! and hence the

Leading Railway of the West and Northwest!

It is the short and best route between Chicago and all points in Northern Illinois, Iowa, Dakota, Wyoming, Nebraska, California, Oregon, Arizona, Utah, Colorado, Idaho, Montana, Nevada, and for Council Bluffs, Omaha, Denver, Leadville, Salt Lake, San Francisco, Deadwood, Sioux City, Cedar Rapids, Des Moines, Columbus, and all points in the Territories, and the West. Also, for Milwaukee, Green Bay, Oshkosh, Sheboygan, Marquette, Fond du Lac, Watertown, Houghton, Neenah, Menasha, St. Paul, Minneapolis, Huron, Volga, Fargo, Bismarck, Winona, La Crosse, Owatonna, and all points in Minnesota, Dakota, Wisconsin and the Northwest.

At Council Bluffs the Trains of the Chicago and Northwestern and the U. P. Railways depart from, arrive at and use the same joint Union Depot. Also, close connections are made with the Lake Shore, Michigan Central, Baltimore and Ohio, Ft. Wayne and Pennsylvania, and Chicago and Grand Trunk Railways, and the Kankakee and Pan Handle Routes. Close connections made at Junction Points. It is the **Only Line** running **PULLMAN HOTEL DINING CARS** between Chicago and Council Bluffs. Pullman Sleepers on all Night Trains.

Insist upon Ticket Agents selling you Tickets via this road. Examine your Tickets, and refuse to buy if they do not read over the Chicago and Northwestern Railway.

If you wish the Best Traveling Accommodations you will buy your Tickets by this route, **AND WILL TAKE NONE OTHER.**

"THE GREAT ROCK ISLAND ROUTE"

Calls your attention to the following REASONS WHY, if about to make a Journey to the GREAT WEST, you should travel over it:

As nearly absolute safety as is possible to be attained. Sure connections in UNION DEPOTS, at all important points. No change of cars between CHICAGO, KANSAS CITY, LEAVENWORTH, ATCHISON or COUNCIL BLUFFS. Quick journeys because carried on Fast Express Trains. Day cars that are not only artistically decorated, but furnished with seats that admit of ease and comfort. Sleeping cars that permit quiet rest in home-like beds. Dining cars that are used only for eating purposes, and in which the best of meals are served for the reasonable sum of seventy-five cents each. A journey that furnishes the finest views of the fertile farms and pretty cities of Illinois, Iowa and Missouri, and is afterwards remembered as one of the pleasant incidents of life. You arrive at destination rested, not weary; clean, not dirty; calm, not angry. In brief, you get the maximum of comfort at a minimum of cost.

That the unremitting care of the Chicago, Rock Island & Pacific Railway for the comfort of its patrons is appreciated, is attested by its constantly increasing business, and the fact that it is the favorite route with delegates and visitors to the great assemblages, political, religious, educational and benevolent, that assemble from time to time in the great cities of the United States, as well as tourists who seek the pleasantest lines of travel while en route to behold the wonderful scenes of Colorado, the Yellowstone and Yosemite. To accommodate those who desire to visit Colorado for health, pleasure or business, in the most auspicious time of the year, the Summer season and months of September and October, the Company every year puts on sale, May 1st, at all coupon ticket offices in the United States and Canada, round trip tickets to

DENVER, COLORADO SPRINGS AND PUEBLO,

At reduced rates, good returning, until October 31st. Also to San Francisco, for parties of ten or more, good for ninety days, at great reduction from regular fares.

REMEMBER, this is the most direct route for all points WEST and SOUTHWEST. For further information, time-tables, maps or folders, call upon or address

R. R. CABLE,

Vice-Prest and Gen'l Man'gr, Chicago.

**The J. W. Stoakes Automatic Shading
PEN.**

FOR PLAIN, FANCY AND ORNAMENTAL LETTERING.

WASHINGTON, D. C., March, 1880.

I desire to say that the "Shading Pen" invented by Mr. STOAKES meets a want long felt by penmen. The work done by it is perfect in line and shade. The rapidity with which lettering is done, aside from the beauty of the work, is enough to recommend it for general use.

H. A. WHITNEY, Asst Cashier, U. S. Treasury.

U. S. ENGINEER'S OFFICE, St. Louis, Mo.,

February 11, 1880.

I have tried the PEN, and it gives great satisfaction. It is worth twice the price asked. It is valuable for headings, etc.

JNO. R. BALLINGER.

CHICAGO, April 21, 1880.

Indispensable for the execution of neat, attractive lettering, etc.

NEW YORK.

**A FIRST-CLASS
Book and Stationery Business
FOR SALE.**

THE largest Book and Stationery business in a City in Pennsylvania that has a population of forty-five thousand inhabitants, is situated in the midst of a rich mineral and agricultural district, is a large manufacturing city, also a great railroad centre (there being seven different railroads running into the city and another road being surveyed), but four hours' ride from New York and two hours from Philadelphia, is offered for sale at a bargain on account of ill health.

It is centrally located in the best business square in the city, and has been established for more than thirty years—the stock of goods is fresh and clean,—and doing a large wholesale and retail business. The business for the year 1880 amounted to \$20,000.

This is a splendid opening for any person wishing to engage in the above-named business, and will bear a thorough investigation.

For particulars address W. A. R., care of American Stationer, 74 Duane St., New York City, N. Y.

STAFFORD'S UNIVERSAL WRITING INK!

A PERFECT BLACK WRITING FLUID.

It contains no gum, and flows very freely, making a smooth, even mark.

It positively will not corrode Steel Pens.

Writes darker than any known ink, and turns at once jet black.

Being a perfect chemical solution, it cannot thicken or deposit a sediment.

Never moulds in any climate. Freezing does not injure it.

Never changes in color or consistency while in use in the inkstand.

Resists Acids. Is more permanent than any other ink.

It will be found more economical than any other ink, as it can be used to the last drop.

One of the most valuable and remarkable features of this Ink is the extreme rapidity with which it dries on the paper, it being seldom necessary to use a blotter. This quality should recommend it to bookkeepers.

In the United States, this Ink has completely superseded the old fashioned pale black inks, and has to a great extent taken the place of the faint green writing fluids.

Mr. J. ADEE HEPWITH, the eminent English Chemist, says:

"I find S. S. Stafford's Universal Ink to be proof against all acids; and, from my knowledge of its ingredients, I believe it to be the most permanent ink in existence, as it cannot rust out like other inks that are prepared from galls and iron. As it seems to be entirely free from any tendency to thicken or corrode steel pens, and is **BLACK AT ONCE**, I cannot but regard its invention as a valuable discovery."

S. S. STAFFORD, Chemist, No. 218 PEARL STREET, NEW YORK.

NOYES DICTIONARY HOLDER.

NO stock is complete without the Noyes Dictionary Holder. It is the most conspicuous object in a Book Store, meets with the readiest sale and yields the largest profit. Last Season Thousands were sold by a single dealer. Hundreds were sold by scores of dealers. Scores were sold by hundreds of dealers. Dozens were sold by thousands of dealers. Exhibit samples of the new styles and they will sell like fun. I now make a Tilted Holder that elevates the upper end of the book as it opens, and lowers it again as it closes. It handles the book as though it were alive.

FOLEY'S

Celebrated Gold Pens and Pencils
THE FINEST AND BEST.

CIRCULAR.—To those engaged in mercantile pur-
suits, any invention that will facilitate their labor is
highly worthy of notice, as well as of extensive patron-
age. One of the most important inventions of
the present age is that of a pen that possesses the
necessary qualities of firmness in mark and durability
in use. Pre-eminently such are those of JOHN
FOLEY, Manufacturer of Fine Gold Pens and Pencils,
No. 2 Astor House. Their superior value is tested by
the long time he has been engaged in our city in their
manufacture. We, the subscribers, who know the
value of FOLEY'S PENS from constant use of them
for a number of years, cheerfully recommend them
to those who wish for the best and most perfect Gold
Pen ever made.

Trade Gossip.

All new goods and designs which are not, strictly speaking, "Novelties" will be noticed under this head. The trade are requested to forward descriptions with samples in order to secure proper notice.

Thomas Holt, stationer, Philadelphia, Pa., is dead.

C. C. Stuecker, printer, Louisville, Ky., has sold out.

The estate of Joseph Glacel, bookbinder, New York city, has sold out.

Louisa M. Edelbert, dealer in fancy goods, Richmond, Va., has sold out.

S. D. Smith, fancy goods dealer, Warren, Mass., is advertising to close out.

Herman Tonn has succeeded Max Lustig, fancy goods dealer, New Britain, Conn.

Hostetler & Ela, publishers of the *Herald*, Decatur, Ill., have sold out to Frank H. Hall.

Harry Watts has been admitted to the firm of Geo. W. Reed & Co., stationers, &c., Pittsburg, Pa.

J. F. Marchand, publisher of the *Reporter*, Leontia, Ohio, has removed to Wooster, same State.

G. W. Wright & Son, publishers of the *Messenger*, Santa Clara, Cal., have dissolved partnership.

Uhlman & Glock, booksellers and stationers, Columbus, O., have dissolved partnership. Glock & Son succeed.

E. A. Taylor & Co., booksellers and stationers, London, Ont., have dissolved partnership. E. A. Taylor continues.

Madell & Frankland, paper stock dealers, Providence, R. I., have dissolved partnership. Charles E. Frankland continues.

W. S. Adams & Co., fancy goods dealers, Pittsburg, Pa., have been closed by the sheriff; they will be sold out by trustees' sale on the 12th instant.

The firm of Clapp & Taylor, booksellers and stationers, Memphis, Tenn., has been dissolved by the retirement of W. L. Clapp. The firm style remains unchanged.

A. J. Hawks has succeeded T. S. Hawks, bookseller, stationer and newsdealer, Buffalo, N. Y., and will continue the business at the old stand, 31 East Seneca street.

Thos. S. Dando & Co., Philadelphia, have just out a series of advertising cards (No. 1,521) which are got up in extra good style. They are grotesque sketches of animals—dogs, cats and pigs.

The Syracuse Litho Engraving and Printing Company, and Powell & Co., printers, Syracuse, N. Y., have been damaged by fire, the former sustaining a loss of from \$5,000 to \$8,000, fully insured; the latter \$2,000, fully insured.

Mehl, Wallace & Co., stationers, &c., Erie, Pa., have dissolved partnership. Wm. O. Mehl retiring. The business will be continued by the remaining partners under the style of Wallace, Walker & Co., who will settle the business of the late firm.

The United States Ticket and Tablet Company, 170 Clark street, Chicago, has just issued a neat and tasty sample book, containing full sets of all its numerous "fancy cut cards," conveniently arranged for selection or display. The book will be sent on receipt of fifty cents.

F. L. Holloway, representing the Robinson Engraving Company, Boston, is on the road with a full line of samples of Xmas and New Year cards. These are beautiful goods. Some of them are hand-painted on silk or card board, silk fringed. Others are engraved with all of the finish for which the Robinson Engraving Company is noted. The designs are novel and very attractive. Some of them are on ribbon. The work is remarkable for delicacy and exactness. Mr. Holloway also carries a line of paperies, stamped and illuminated; cabinets in velvet, silk and satin, with fine papers; illuminated papers and cards in boxes; New Year calling cards, &c. He also has sample of fine steel engraved covers. These goods have been got out at great expense, and it is said that they are such as have never been presented before. The house does all kinds of engraving and stamping. Mr. Holloway's present trip extends up the valley of the Hudson and into Canada.

Daniel Slote & Co. have just issued their annual catalogue and price list, which seems to be the most complete that has ever been issued. It contains a number of tables of great value, including a graduated index scale, a table showing the number of pages to each quire and to each number of quires, and a table showing the names, sizes and weights of papers used in the manufacture of goods mentioned in their catalogue; table of rulings, and illustrated styles of binding. The catalogue has four indexes—an alphabetically arranged index in front, index of headings cut through the book, index to their school supplies, index to numbers consecutively arranged. The catalogue represents about four thousand lines of goods, and will be found useful to every stationer in the country.

Hasbrouck & Watson have now ready for the market their novelty suspending ring. The prongs will fasten a single sheet of cardboard to a thickness of an eighth of an inch of paper. It may be inserted and clinched in one operation, in connection with a small tool made for that purpose. It is made entirely of tinned steel wire, and is therefore said to be neater and stronger than anything intended for the same purpose. It is thought to be the cheapest suspension ring made. The cheapness of these rings and the facility with which they are fastened, will make the consumption much larger than it has heretofore been. Extra rings are packed five hundred in a box. Regular discounts to the trade.

McLoughlin Brothers have just issued four new books, entitled Crowquill's Fairy Tales, and named respectively "Giant Hands," "Patty and Her Pitcher," "Tiny and Her Vanity" and "Giant and Dwarf." They are large octavo and contain twelve plain illustrations. They retail at five cents each. This house has also published a new edition of "Under the Window," after Kate Greenaway. It is richly bound, contains an illustrated index and the plates are elegantly printed in colors. This edition is also published in paper in six parts.

The Mammoth Falcon is the name given to a new pen just introduced by the Esterbrook Steel Pen Company. Although, as its name implies, it is a pen of an unusually large size, it will be found to write fine and easy, and it has a delicate point which is very flexible. It is virtually a falcon pen on a large scale.

Edward Cook, for thirteen years the Western representative of Ivison, Blakeman, Taylor & Co., of this city, has been admitted to the firm of Jansen, McClurg & Co., publishers, &c., Chicago, the copartnership dating from July 1.

Chamberlain & Co., wholesale paper dealers, Kansas City, Mo., have dissolved partnership.

Gray & Spring, printers, St. Louis, Mo., have been burned out. Insured.

Eugene Glock, of Glock & Sons, Columbus, Ohio, was in town during the week.

The stock of L. A. Murdock, paper stock dealer, Worcester, Mass., has been attached.

T. H. Payne, of T. H. Payne & Co., Chattanooga, Tenn., visited the city during the week.

Geo. Ellis & Brother, booksellers and stationers, New Orleans, La., have dissolved partnership.

Edward A. Flint, bookseller and stationer, Yarmouth, Nova Scotia, has made an assignment.

The firm of John H. Liggett, bookseller and stationer, Columbia City, Ind., is now Liggett & Crider.

The Elsey School Furniture Company, of Springfield, Mass., is overrun with orders for its blackboard.

E. A. Holmes has retired from the firm of W. A. Varty & Co. dealers in notions, Lexington, Ky. Style unchanged.

Maris & Pritchard, publishers of the *Gazette*, Kokomo, Ind., have dissolved partnership. Pritchard & Hoss succeed.

Henry D. Mentzel has retired from the firm of Henry D. Mentzel & Co., wholesale paper dealers, Baltimore, Md. Mentzel & Warner succeed.

Frank C. Johnson, one of Liebenroth, Von Auw & Co.'s representatives, has been lying quite ill for several days with cholera morbus at Columbus, O.

Several foreign buyers of paper have been in the city during the past week looking around the market for goods, one of the number from Mexico. There is no doubt that the low prices of paper now ruling are attracting a considerable foreign trade.

McCarty & Hasberg have been receiving from Europe, for some time past, unusually large quantities of the most beautiful lines of fancy goods produced in the French and Viennese factories. Trade with the house is now open, and the anticipations are that it will exceed that of any previous year.

A. Weidmann & Co., are receiving immense quantities of goods from Europe, and it is said that the stock which the firm intends to show this year will include a greater variety than the house has ever handled in a single season. Among the novelties in the toy line is one styled the new electric machine, which is capable of driving movable articles. The firm's toy railroad train is driven in a handsome manner by it.

N. Ure has taken possession of the business of the late firm of Hart & Rawlinson, Toronto, which he will carry on in all its branches with vigor. Mr. Ure, who was educated in Toronto, is the son of the late G. P. Ure, a well known member of the press of former years. He has had a good business training in Montreal, having been for many years a partner in the well known firm of Dawson Brothers, and enters upon his new sphere of labor with the best prospects of success.

O. Obpacher, of Obpacher Brothers, left for Europe on Saturday per steamer Neckar. Mr. Obpacher has been ill for some time, and, in order to regain his health, his physician deemed it necessary for him to take a trans-Atlantic trip. He will return about October 1, should he then be convalescent. During his absence, S. Garre, the efficient manager of the concern, will have to remain in charge of the office, and will

therefore be unable to call on the out-of-town trade, as he had previously intended.

William Robertson, bookseller and stationer, Melbourne, Australia, has gone out of business.

D. & J. Sadlier & Co., booksellers and stationers, New York city, have made an assignment.

McGinness & Runyan, booksellers and stationers, Princeton, N. J., have dissolved partnership.

Howard & Webber, printers, Salem, Mass., have dissolved partnership. C. H. Webber & Co. succeed.

James White & Son, paper manufacturers, Bloomingdale, N. J., have dissolved partnership. F. R. White continues.

The *Foothill Tidings* and *Free Lance*, Grass Valley, Cal., have consolidated under the style of *Daily and Weekly Tidings*.

Charles H. Knapp & Co., 70 State street, Chicago, are about placing upon the market something new and fine in the way of a cheap advertising card. They want agencies.

The attention of the trade and those buying school bags is called to the announcement of R. Fideau, to be found in another column. The "O. W. Busybody" school bag of Mr. Fideau is said to be meeting with great success.

Reen & Trump, printers and lithographers, Philadelphia, Pa., have dissolved partnership. Charles Reen has associated with him Isaac E. Straus, and will continue under the style of the Reen Lithographing Printing Company.

F. H. Dunkinson, formerly of F. H. Dunkinson & Co., the first to introduce Irish linen papers in this country, is now successfully engaged with the Hatch Lithographing Company, of this city, for which business he seems specially adapted.

John Macfarlane, formerly of E. B. Smith & Co., Detroit, and more recently with their successor, Thorndike Nourse, was in town during the week making purchases for a book and stationery store which he intends to open December 1.

Charles S. Plummer, owing to indisposition, induced by a severe cold and malaria, was compelled to shorten his vacation and return home. He had started out to take two weeks' rest, when he was overtaken with sickness. He is now convalescent.

E. P. Donnell & Co., 182 Monroe street, Chicago, have lately issued a new price list of book binders' and paper box makers' tools, materials and machinery. They claim it to be the first complete list of its kind ever issued. Sent on application.

Nelson Peychaud has purchased the interest of Joseph Garcia in the firm of Peychaud & Garcia, stationers, &c., New Orleans, La. He will continue the business at the old stand, 48 Camp street, under the style of N. Peychaud & Co., C. W. Corson having an interest.

Will F. Park has started on his fall trip with samples of Hasbrouck & Watson's specialties. He intends taking in the entire West and Northwest, returning through the South. He will have several new and important additions, which it will be profitable for the trade to examine.

The Bay State Paper Company, Holyoke, Mass., is offering a line of toilet papers called the "Medicated Boudoir" brand, which are warranted full count, 1,000 sheets to the package. These papers are said not to contain any wood, and to be made of the best stock in the market. See advertisement.

less trade discounts. Correspondence solicited.

NEW YORK OFFICE AND SALESROOM, 18 MURRAY STREET.

THE BAY STATE PAPER COMPANY, HOLYOKE, MASS.,

were among the pioneers in the W. C. Paper trade, and their goods, from the start, were distinguished for their fine quality and the superior style in which they were wrapped. Their example has been approved and imitated by a swarm of competitors, who have flooded the market with inferior goods, put up in packages of 600 to 800 sheets, misleading the unwary, and sold at apparently lower figures; but the trade and consumers generally recognize the fact that a good article, honestly put up, in 1,000 sheet packages, is the most profitable both for use and for sale. Their goods are all guaranteed 1,000 sheets to package, and **no short count**. No wood is used in any of these papers, but they are made of the very best stock in the market.

THE "MEDICATED BOUDOIR" BRAND

Has no equal for weight, strength, softness, and color, and commands the front place with "fine retail trade." Present reduced quotations furnished on application.

The attention of the trade is directed to our Fine Manilla Writing and Copying Papers. A comparison in price and quality with other goods will convince any purchaser that it will pay to buy of us. Samples and prices on application.

THE STATIONER.

DEVOTED TO THE INTERESTS OF THE

Stationery and Fancy Goods Trades.

WEEKLY--\$2.00 PER ANNUM.

Single Copies - - - 10 Cents.

NEW YORK, THURSDAY, AUGUST 11, 1881.

Advertisements cannot be received for insertion in the current week later than 12 M. on Wednesday. The charge for advertising is 25 cents a line, each insertion. Special terms for standing and displayed advertisements to be had on application.

This journal aims to be a medium of information for and a representative of the interests of every one connected with the stationery and fancy goods trades. It contains a full and trustworthy survey of the market for stationery in this country, in all cases giving the actual prices at which goods can be bought of importers and jobbers in this city, together with a detailed account of novelties in the trade, patents relating to stationery, and current items of interest. A review of foreign markets and accounts of movements abroad will also be furnished, and no pains will be spared to make THE STATIONER a thorough and complete exponent of the trade.

Subscription and postage for Great Britain, per annum..... 12s.

Any information our readers may wish to obtain shall be cheerfully given, and prompt replies will be made to all inquiries addressed to us on any subjects of interest to the trade.

Communications on all trade matters are earnestly solicited. Address

HOWARD LOCKWOOD, Pres. and Treas.

THINGS are better.

"RICHARD's himself again," and so is trade.

QUITE a little "dusting around" in business is apparent.

BUYERS are coming to town, travelers are sending in orders, and the season is fairly begun.

RUSH is the word. Some of the houses are opening their eyes to the fact that the "early birds" are out earlier than usual, and that there is very much more activity than is wont for the time of year.

PROGNOSTICATIONS, therefore, have not been out of the way—certainly not up to this time. Current trade indicates that the opinions as to a prosperous season have been carefully formed and rest upon substantial reasons. We are glad of this promise. Glad for our own trade; glad for the country. It indicates that everybody is doing well.

A CORRESPONDENT makes the old complaint that his trade is undersold by the dry goods people and others, who take advantage of stationery goods as an advertisement, selling them at cost or under, and killing off legitimate business. Of course this kind of thing is only done to draw, and profits are made up on something else; but we think it is time that houses which sell to these cutthroats should be brought up short. If honor and conscience have no control in trade, it should be so fixed that self interest will prevent the abuse complained of. We have not been afraid heretofore to mention instances which have come to us duly authenticated; and if our readers will only give us something exact and tangible to go on, we shall be only too glad to try to bring the offenders to book. Manufacturers and wholesale houses have power to prevent such abuses. Let them sell only to reputable members of the trade, and exact a pledge or forfeit if any one to whom they sell disposes of goods under a fixed rate. The trade themselves ought to take this thing up and initiate steps for self protection.

We print in this issue the paper presented by Howard Lockwood before the meeting of the American Paper Makers' Association at Saratoga, and which, on motion of the Hon. Warner Miller, was incorporated in the report of the proceedings. This paper is an exposition of the export possibilities of this country, particularly intended for the paper trade, but equally interesting to all classes of merchants. It presents briefly but clearly a review of commerce with important foreign markets, and suggests possibilities which American manufacturers should consider and try to act upon. As we have frequently remarked, this subject of asserting our commercial rights and assuming a vastly more impor-

tant position in the world's markets than we now control of ourselves, is something which must be taken up and worked out. We shall attain an equal, if not the highest, position in time; but it is positive neglect and disgrace if we allow it to come without proper effort to anticipate and forward it. Carelessness in this respect is criminal; for we cannot assume that days of unlimited prosperity are before us. There will be revolutions and changes in trade, and we should be ready to oppose them, or at least meet them with some resource which will cause them to fall less onerously on the country, and which will at least save a part of the trouble, anxiety, and loss likely to follow when we find that business is all at "sixes and sevens" and we are looking out for something to do and a place to put our goods. Again, we want to secure direct trade and to rid ourselves of a host of intermediaries who do not work to our advantage.

Read Your Paper.

NEW YORK, August 8, 1881.

To the Editor of The Stationer:

I received the appended letter this A. M., and in reply I gave the names, but added "I guess you don't read your AMERICAN STATIONER," as I do. I take it home and study it, leisurely at night (so I know when ever you leave my name out of the directory). Yours,

KISSAM,

The Ruler.

Dear Sir—We wish to get the best eyeletting machine made. Large size and suitable for all classes of job work. Can you tell us who makes such a machine and greatly oblige?

Yours respectfully, _____, per B. B.

Slaughtering Trade.

WASHINGTON, D. C., August 6, 1881.

To the Editor of The Stationer:

I fear the prospect is not as bright as it might be for the retail bookseller and stationer here this fall, owing to innovations which should be corrected in some way.

There is a disposition with many manufacturers and jobbers to play a willful, deliberate double-dealing game to the injury of the retail trade. I have been called in frequently by private parties in this city, and asked to estimate on envelopes, paper and stationery generally, and upon inquiry I am informed with a great flourish that "we buy direct as cheap as you men, and being large consumers buy perhaps as close as the men in the trade."

I have put in large orders frequently on a margin of 5 and 10 per cent. on New York net prices, as an experiment with such houses and invariably have lost. This is not confined to the stationery houses, but prominent dealers in fancy goods are dealing direct and sending their representatives here offering inducements to buyers direct, so that all of the bulk of the trade goes out of the city and consequently out of our hands. Last fall the booksellers and stationers on Seventh street particularly had to cut the prices to a small margin above freights, owing to certain prominent dry goods and fancy goods dealers duplicating their stock and selling at actual cost as an advertising dodge. I suppose that two hundred people left my store the day before Christmas, most of them regular customers, who, although I was selling at the lowest figure, supposed I was taking advantage of them, because I would not compete with these men at actual cost. Several parties have expressed in forcible language their opinion of such agents who sell these parties, and as my stock and that of my neighbors were duplicated by these houses, to the injury of myself and others, I have quietly ignored my usual order and placed it with another house outside of your city, which I think has a little more respect for its standing.

We have been idle for two months waiting for the school and fall trade, and as an illustration of the favorable aspect of things, one of these houses has just received thirty cases of slates to be given away. I despise this chromo business, and think a man should build up his business on the only proper basis of buying right, selling at a fair profit, and giving away nothing with the intention of taking advantage in another direction. I also think that any respectable manufacturer or jobber is in a very deplorable state

when he solicits your aid in pushing his goods, and then goes all around outside of the trade and murders your prospects. FAIR DEALING.

P. S.—I have in contemplation ordering a case of spool cotton and a web of calico and, as my only salvation, offering in retaliation that every one who buys anything, from a postal card up, will be given the choice of a chromo of my rival, a spool of cotton, or a dress pattern for the baby.

F. P.

CEMENT FOR MOUNTING ELECTROS.—A German master printer, G. Fischke, writes to the *Journal für Buchdruckerkunst* that he has succeeded in compounding a cement for attaching metal to metal or to wood. He alleges that the new cement is in every respect well adapted for securing stereotype plates to their wooden base. He hopes to be able to apply the composition in question to the surface of linen or canvas, so that in mounting a plate it shall only be necessary to cut a piece of the fabric or plaster to the size of the block and insert it between the wood and the metal. It is alleged that after the surface has been weighted for a short time with a piece of warm iron, the adhesion of the two substances, the one to the other, will be complete.

On a postal card on view at an exhibition in Germany, there had been written, in a German system of short-hand, 35,000 words. Subsequently Mr. Hurst, of Sheffield, England the publisher of the *Phonograph*, a short-hand magazine, offered prizes for miniature short-hand. The system was to be Pitman's, the writing to be legible to the naked eye, and to be on one side of an English postal card, which is considerably smaller than a German card—25,000 words on the former being reckoned equivalent to 33,000 on the latter. The first prize in this competition was awarded to G. H. Davidson, whose postal card contained 32,373 words, including the whole of Goldsmith's "She Stoops to Conquer," an essay on John Morley, and half of Holcroft's "Road to Ruin."

Photo-lithographic transfer paper and ink are prepared in the following manner: The paper is treated with a solution of a hundred parts of gelatine and one part of chrome alum in 2,400 parts of water. After drying it is treated with the white of egg. It is made sensitive with a bath consisting of 1 part of chrome alum, 14 parts of water and 4 parts of alcohol. The latter ingredient prevents the white of egg from dissolving. On the dark places the white of egg, together with the ink with which the exposed paper has been coated, separates in water. The transfer ink consists of 20 parts of printing ink, 50 parts of wax, 40 parts of tallow, 35 parts of colophony, 210 parts of oil of turpentine, 30 parts of Berlin blue. It is found that a varnish formed of Canadian balsam, dissolved in turpentine, supplies a most valuable means of making paper transparent. The mode by which this is most satisfactorily accomplished is by applying a thin coating of this varnish to the paper, so as to permeate it thoroughly, after which it is to be coated on both sides with a much thicker mixture. The paper is kept warm by performing the operation before a hot fire, and a third or even a fourth coating may be applied until the texture of the paper is seen to merge into a homogeneous translucency. Paper prepared according to this process is said to come nearer than any other to the highest standard of perfection in transparent paper. Care must be used in making, as the materials are highly inflammable.

NATIONAL ASSOCIATION OF ENVELOPE MANUFACTURERS.

The National Association of Envelope Manufacturers met on Tuesday at the Fifth Avenue Hotel, pursuant to adjournment at Saratoga, July 27. The trade was well represented. Samuel Raynor presided, and W. H. Prescott, of White, Corbin & Co., was secretary. All the leading firms were represented except G. Henry Whitcomb & Co. and M. A. Reay.

A set of laws for the government of the organization was adopted, subject to any changes which might hereafter be determined upon; and an informal discussion of matters pertaining to the business of the association was had. It seemed to be the feeling among those present that this last movement should be permanent and that all should work harmoniously and in good faith to sustain prices. The next meeting is subject to the call of a committee.

SILVERING MIXTURE.—A German scientific journal furnishes the following process for the instantaneous coating of copper or brass objects with silver without difficulty: Mix 3 parts of chloride of silver with 20 parts of powdered cream of tartar and 15 parts of powdered common salt. Moisten a suitable quantity of the mixture with water, and rub it with a piece of blotting paper upon the metallic object, which must be thoroughly clean. The latter is afterward rubbed with a piece of cotton upon which precipitated chalk is dusted, then washed with water and polished with a dry cloth.

Market Review.

OFFICE OF THE AMERICAN STATIONER, {
WEDNESDAY, August 10, 1881.

THE MONEY MARKET.—The money market is still characterized by an abundance of funds and low rates, call loans ruling $2\frac{1}{2}$ to 3 per cent. on stocks, and $2\frac{1}{2}$ to $2\frac{3}{4}$ per cent. on governments. Time loans are $3\frac{1}{4}$ to 5 per cent. for ninety days to six months, and prime commercial paper is in demand at $3\frac{1}{2}$ to $4\frac{1}{2}$ per cent. The speculation in stocks is exceedingly dull, and prices have further declined. The dullness and depression are attributed to the large absenteeism from the ranks of brokers and speculators and to the general apathy pending the result of the conference of the trunk line railway magnates at Saratoga touching the railway freight and passenger rate troubles. Certain it is, the market is spiritless and weak. Railway bonds sympathize, governments alone presenting a firm front. The market for sterling exchange was dull and strong, with commercial bills in small supply. The posted rates for prime bankers' sterling are \$4.83 and \$4.85. The actual rates are \$4.82 $\frac{1}{4}$ to \$4.82 $\frac{1}{2}$ and \$4.81 $\frac{1}{4}$ to \$4.81 $\frac{1}{2}$, with cable transfers \$4.84 $\frac{1}{4}$ to \$4.85, and prime commercial \$4.80 $\frac{3}{4}$ to \$4.81 $\frac{1}{4}$.

THE PAPER MARKET.—Nothing has transpired during the week under review to change the condition of the market in any particular. Dealers still feel encouraged with the number of orders received for goods to be made up, and there is also a fair current business from store. Manufacturers express little if any dissatisfaction with the extent of business doing, and most of them report engagements ahead on orders for some time to come. Many shrewd buyers have put in their orders for future supplies, and others are taking advantage of the present low prices to stock up for the fall.

THE STATIONERY MARKET.—A very active trade is gradually being developed, and although it has not yet reached its height, it may be said to be under fair headway. Out of town buyers have arrived here this week in large numbers, and some very heavy orders have been given for goods. Nothing has occurred to change the favorable prospect for trade so generally expressed lately, and the outlook for business through the autumn months never was more favorable. Prices of staples are not reported to have changed since last week, the most recent being the advance in envelopes.

HOW TO EXPORT AMERICAN PAPER.

A PAPER READ BY HOWARD LOCKWOOD, BEFORE THE AMERICAN PAPER MAKERS' ASSOCIATION, AT ITS MEETING AT SARATOGA, ON JULY 27.

That the question of finding markets abroad for the various grades of paper made in this country should be brought before this convention as a leading if not the chief feature of your deliberations, is a most significant fact in more than one respect.

It is significant as acknowledging the importance of the subject, and all the more significant at this date, inasmuch as it indicates that the success, large or small, which has attended individual efforts in this direction, justifies a still further expenditure of time and money in promoting what is now conceded to be commercial interests of the most vital character. I think it was as early as 1873 that I requested several prominent paper makers to express their opinion on the possibility of exporting American papers. There was a very general opinion among them that it was rather too early. Some, however, claimed that it could be done. One showed that he was at that time shipping very satisfactory orders to London, mostly engine-sized flats.

Governor Alex. H. Rice, of Massachusetts, wrote very encouragingly, and, in an interview with him shortly afterwards and a few weeks after his return from Europe, he claimed that he could lay down such paper as that used by the Boston *Herald* in London at a profit. About that time, or possibly a little later, one or more Scotch newspapers were printed on American paper.

The efforts for increasing the export trade in paper of late years have been largely made by one firm, whose operations are quite well known and which deserve every credit for the energy and talent displayed in the undertaking. Without knowing anything of the details of its progress, it has without doubt opened up a trade which will grow and be of positive benefit to it and to the trade generally. I trust that it may be always identified with this great work.

As I understand this subject, the problem to be solved is the finding of markets abroad for at least the surplus product of our mills and the establishing and creating ultimately of a permanent demand for American paper, thus enabling our manufacturers to dispose of not only their surplus, but to enlarge and cheapen their production. Can this be done?

Is this effort to be confined to simply getting rid of odds and ends which we cannot use ourselves? Or is it to expand and grow until American paper is consumed the world over, and this demand is supplied by mills built in whole or part expressly for furnishing this vast trade?

At first it seems surprising that so little has been done, and that very slowly. But it is only during the past ten or twelve years that we have had all of the elements of successful competition with other paper-making countries.

In cheaper grades of printing paper, Belgium mills long had the advantage of us. They used ground wood long before it was introduced and worked profitably in this country. It was this material which often enabled American publishers, including that eminent if not consistent protectionist, Horace Greeley, to prevent the American paper maker from obtaining satisfactory margins. Cheap Belgian and other foreign paper was for years the sword held over the heads of our paper makers by publishers who were willing for this purpose to use the stuff and pay freight and duties. But we have not only put ourselves in the way of an unlimited supply of all classes of cheap and good materials, but we have made wonderful advances in all of the methods and appliances looking toward the output of the best and cheapest paper in the world.

Let us consider in order the several divisions of this question:

First—Have not the paper mills of the United States, when running full time, a larger producing capacity than the country demands?

Second—Is it not possible to build up a large and

ultimately profitable export trade, and has not the time arrived to lay the foundations of this business?

Third—What are the best and most effective methods of quickly accomplishing this purpose?

PRODUCING CAPACITY OF AMERICAN MILLS.

In order to throw some light on the question as to whether American paper mills have a capacity in excess of the actual wants of the country, I have compiled and beg to submit to you a table showing the capacity, in pounds, per day of twenty-four hours, of all the mills. This report is based upon the claims of manufacturers as made to me in returns for my annual Directory. These figures are used as reported, except in cases where there has seemed to be evident and palpable mistakes. This table may be of value in approximating the capacity, if not the actual product, of the mills.

The aggregate shows a capacity of upwards of 5,000,000 pounds daily—an increase in the past two years of about 1,000,000 pounds. In this period the increase in writing paper was about 33½ per cent.; in book and news, 25 per cent. These figures, it must be borne in mind, represent the capacities, not the actual output of the mills. Two years ago, 10 per cent. of the mills were reported idle, and many of them running on short hours. For the past year only 4 per cent. are idle, and it is safe to assume that all mills have been pretty well crowded to their utmost capacity. It seems, therefore, reasonable to argue that the actual production of all of the mills during the past year, as compared with that of two years ago, is largely in excess of the percentage of increase as reported in capacity. If this is the case, it is simply remarkable that trade is in as healthy a condition as we know it to be to-day.

But we are threatened with a still further increase in producing capacity. Capital is still going into the business. New mills are being built and projected; old mills are being remodeled and enlarged; new materials are being introduced; all materials are becoming cheaper, and everything points to a still larger product than indicated by these last reports. Will the country absorb it?

We are not standing still. The newspapers are increasing in number and circulation; but right here let me say that the same percentage of increase that has obtained during the past two or three years in connection with the press will not in all probability continue. The marked increase of late years has been very largely owing to the law which allows publishers to send through the mails at pound rates all of the specimen copies that they choose to mail. This has in a measure regulated itself, and for this and other reasons I draw the conclusion as stated. The immense prosperity of the country has tended to cause an unusual consumption of paper. There are those who claim that this consumption is taking up all of the paper made. It may have been so for awhile, but the signs of the times point to another conclusion.

But admitting for the sake of argument that our home consumption will about exhaust the production. In the first place, if there is a surplus, however small, it will always be a disorganizing element in the market. This you know from past experience. In the next place: Why should not American paper makers compete for the trade of a large part of the world? Where is better paper made? Where can cheaper paper be made?

Then why not prepare to offer buyers of paper the world over all that they will take. If they take more than you can conveniently make, build new mills expressly to supply this trade. In the city of Brooklyn there has just been completed a factory costing \$300,000, built expressly to fill orders for clocks. Do you know what percentage of the sewing machines, reaping and mowing machines which are made in this country, are built for foreign trade? There are builders of these machines all through Europe, and yet our manufacturers successfully compete with them. They have all of the cheap wood that they want, and if they cannot get good enough iron and steel made here they import it, pay duties and freights, and after putting it in their machines are still able to beat the European manufacturers of the world. Why, there are six or eight firms in Sheffield, England, whose entire business is the importing of American hardware and edge tools. Think of it! American edge tools and cutlery

shipped to Sheffield! Yes; and a good deal of it made out of steel imported from there.

American paper makers would think it rather hard if they were asked to pay heavy duties on English rags and then expected to make them into paper and export same at a profit back to England.

You pay next to no duties. If what little you pay on chemicals is burdensome, why not erect works of your own in Western Virginia and other places where there is every facility for producing untold quantities.

Is it not therefore a safe conclusion to come to, that it is not only necessary for immediate steps to be taken to extend the export of paper, to get rid of a surplus, but also desirable to increase your production and seek new markets?

While speaking of competing with foreign paper makers for the trade of the world, I will add a list of paper making countries, giving the number of mills in operation in each:

	Paper Mills.		Paper Mills.
Germany	545	Portugal	16
Austro-Hungary	160	Holland	16
Belgium	28	Roumania	1
United States	960	Greece	1
Denmark	18	Switzerland	15
France	539	Russia	160
Great Britain	650	Sweden and Norway	25
Australia	4	Spain	63
Canada	20	Japan	6
Italy	206	Cuba	1

It does not require an examination of this list to prove that the United States is the greatest paper producing country in the world. You all know this, and you also know that in bulk and per capita we consume the greatest amount by far of any other people.

It seems to me that these facts should place the paper trade at the head of all American industries. From this standpoint, when we go before the other nations and ask them to buy our paper, we are particularly strong. There is everything in being able to show that the mills of this country produce more than those of several of the largest paper producing countries combined. Can our cotton manufacturers say the same? Compare the number of spindles running in this country, North and South, with those in operation in England. Can our woolen manufacturers say the same? Can even our iron producers claim any such predominance over foreign producers?

What is the cause of this? The paper industry has never been protected to any marked extent. The duties to-day are below the average, and far under those imposed on cottons and woolen goods. These facts should be kept more to the front. The paper trade should assert its importance more earnestly.

When you come to talk business with foreigners the prestige of occupying such a leading position in your own country and relatively as compared with the same industry abroad will command attention when many other arguments fail. There is a good deal in being able to say we will sell you not only the best paper, at the lowest price, but you can depend on us for your whole supply, and we will deliver it to you promptly and quickly.

POSSIBILITIES OF AN EXPORT TRADE.

In considering and answering the second question it needs no argument or figures to prove that paper is consumed all over the world. We know that the business of the world cannot be and is not carried on without the consumption of all classes of paper.

It seems to me proper at this point, and as entirely germane to the subject, to briefly glance over the condition of general trade and commerce in the various countries which may be designated as non-paper-producing countries.

It will do no harm to fix in our minds the magnitude of the general business done between these peoples and the paper producing countries which now hold their trade. The result of attempts to ship paper to the very doors of European paper mills is no fair criterion of what can be done with other countries. The proper policy is to compete for the trade which Great Britain, France and Germany possess in all sections of the globe.

Beginning with one of Europe's best customers, let

TABLE SHOWING THE DAILY CAPACITY IN POUNDS OF THE PAPER MILLS OF THE UNITED STATES NOW RUNNING, AS REPORTED BY THE MANUFACTURERS FOR INSERTION IN THE SEVENTH EDITION OF LOCKWOOD'S DIRECTORY OF THE PAPER TRADE, 1881 (a).

SUBMITTED TO THE THIRD ANNUAL CONVENTION OF THE AMERICAN PAPER MAKERS' ASSOCIATION, BY HOWARD LOCKWOOD, PUBLISHER PAPER TRADE JOURNAL.

(a) This table shows the daily capacity, not the actual production, of all the mills. The basis of the table is the statement and claims of manufacturers. In some instances figures have been altered when manufacturers have reported a producing capacity which was evidently incorrect when compared with the size and number of engines, the power and other details in our possession, and in the case of mills of which we have no direct knowledge, we have estimated the capacity very closely what a mill can produce. About 4 per cent. of the mills were idle at last reports, the capacity of which does not appear in this table. Total number of mills as last reported, 967; idle, 34.

(b) Every kind of book and news paper from all classes of stock is embraced in this column.

(c) These totals represent the product of mills solely devoted to the manufacture of chemical fibre. We have not included pulp made by paper mills for their own consumption.

(d) All kinds of colored paper, except ordinary tinted book and writings, are included under this heading.

(e) This column includes many small "air-dried" mills, whose product for the season aggregates only a comparatively small amount.

(f) This does not include pulp made from straw at rural paper mills, but only at such mills as sell to paper makers.

(g) Includes all kinds of white and colored tissue.

(h) Some ground wood pulp, made and used at the paper mill, is not included in these aggregates.

(i) Includes all grades of wrapping and bogus, except straw wrapping.

(j) Includes all grades of bank note, ledger, flat and folded tub and engine-sized, and envelope papers.

us glance quickly at the extent and conditions of trade in

SOUTH AMERICA.

I would say that the manner in which we have neglected the cultivation of commercial relations with that section of this continent, and thereby permitted Europe to sweep off almost its entire trade, has been the wonder of the commercial world. Our "fellow-Americans" of the several South American states have not been so fortunate in their political, social and commercial advancement as we; but the best men of South America are leading their several countries out of the field of internecine warfare into the higher ground of confirmed peace which can alone give commerce and industry those surroundings so absolutely necessary to their development. During all of their struggles these peoples have taken the United States as their guide; yet, divided as we have been by language and origin, we have neither studied their history nor sought their association. We must lay down this maxim, that all men on this continent are our "fellow-Americans," and that the Mexicans, Central Americans and South Americans are nearer to us than the foreign peoples of Europe, and that when we talk of South American trade we talk of a trade which should be ours, and will be ours when we comply with the commercial requirements demanded by the amenities of international trade.

I beg to submit here a table showing the total trade of South America by countries and colonies, together with the comparative shares held therein by England and the United States.

IMPORTS.

Countries.	Total Imports.	From England.	From the United States.
U. S. of Colombia...	\$30,000,000	\$5,098,000	\$5,535,000
Venezuela...	11,000,000	3,217,000	1,941,000
British Guiana...	11,000,000	4,000,000	1,700,000
Dutch Guiana...	2,000,000	600,000	440,000
French Guiana...	1,715,000		235,000
Brazil...	80,000,000	31,000,000	8,100,000
Uruguay...	16,000,000	5,000,000	1,000,000
Argentine Republic...	42,000,000	8,995,000	2,775,000
Chili...	28,000,000	6,248,000	2,000,000
Peru...	30,000,000	7,732,000	2,000,000
Ecuador...	4,400,000	1,475,000	750,000
Totals.....	\$241,115,000	\$73,101,000	\$36,476,000

EXPORTS.

Countries.	To All Countries.	To England.	To United States.
U. S. of Colombia...	\$18,000,000	\$5,534,000	\$7,187,000
Venezuela...	12,000,000	3,690,000	5,576,000
British Guiana...	15,000,000	9,400,000	570,000
Dutch Guiana...	1,000,000	392,000	845,000
French Guiana...	1,285,000		13,000
Brazil...	90,000,000	22,500,000	43,000,000
Uruguay...	17,500,000	3,200,000	1,780,000
Argentine Republic...	40,000,000	3,500,000	2,550,000
Chili...	30,000,000	10,692,000	665,000
Peru...	45,000,000	25,500,000	1,300,000
Ecuador...	4,500,000	1,475,000	530,000
Totals.....	\$274,265,000	\$84,853,000	\$61,516,000

With these facts before us there is no difficulty in discerning the importance, not to say real necessity, of extending the commerce of the United States with the South American countries.

CENTRAL AMERICA.

According to the latest returns from consuls, the following table shows the total estimated trade of Central America:

States.	Imports.	Exports.
Guatemala...	\$2,265,000	\$3,767,000
Honduras...	640,000	595,000
Salvador...	2,186,000	3,237,000
Nicaragua...	994,000	1,619,000
Costa Rica...	2,000,000	5,308,000
Totals.....	\$8,085,000	\$14,526,000

MEXICO.

The trouble of obtaining information as to the details of Mexican trade is great. The following table is the latest from authentic sources. The great if not only drawback to an increased trade with Mexico are the tariff and contraband laws:

IMPORTS INTO MEXICO.

Whence.	Invoice Value.	Market Value.	Duties.
Germany...	\$2,395,000	\$3,884,000	\$1,326,000
Spain...	996,000	1,483,000	636,000
France...	3,462,000	4,921,000	1,974,000
England...	7,186,000	10,388,000	4,241,000
United States...	5,214,000	7,529,000	3,255,000
South America...	880,000	1,391,000	377,000
Totals.....	\$20,142,000	\$29,516,000	\$11,800,000

Whence.	Invoice Value.	Market Value.	Duties.
Germany...	\$1,011,000	\$1,667,000	\$736,000
Spain...	915,000	1,379,000	611,000
France...	8,220,000	4,269,000	1,900,000
England...	8,743,000	12,638,000	5,219,000
United States...	5,016,000	7,109,000	3,436,000
South America...	90,000	204,000	75,000
Totals.....	\$18,995,000	\$27,266,000	\$11,967,000

ASIA.

The chances for trade with Asiatic Turkey will be best demonstrated by an examination of the following table showing:

EXPORTS FROM GREAT BRITAIN TO ASIATIC TURKEY DURING THE YEAR 1878.

Articles.	Value.
Cotton manufactures.....	\$12,390,000
Cotton yarn.....	2,300,000
Woolen manufactures.....	875,000
Linen manufactures.....	380,000
Iron, wrought and unwrought.....	330,000
Copper, wrought and unwrought.....	250,000
Wearing apparel and haberdashery.....	195,000
Coal.....	100,000
All other articles.....	1,441,000
Total exports to Asiatic Turkey.....	\$18,161,000
Imports from Asiatic Turkey into Great Britain.....	14,000,000
Total trade of Great Britain with Asiatic Turkey.....	\$32,161,000

It seems to be the general opinion of our consuls in that section and of intelligent merchants and travelers that the United States should secure a fair share of this trade. Passing on to

BRITISH INDIA,

we find a country with an area of 900,000 square miles and a population of 190,000,000. This country imported in the fiscal year 1878-79, \$165,000,000, and exported \$260,000,000, showing next to the United States the largest balance of trade in her favor of all nations. The amount of paper of all kinds imported during this period was \$1,363,000. Very few native merchants in India know more of the United States than that it is the "land of kerosene." How much more do we know of them?

Our Consul General, in noting the trade relations of India, places the United States third on the list, being led by only England and China. We hold this position, however, mainly through the volume of imports from India to the United States.

The amounts of our exports to that country as recorded are small, although a large quantity of manufactured goods and produce reach India through England, which may be said of almost every country in the world. British merchants, following the letter and spirit of successful commercial law, strain all points to supply all countries with goods which cannot be made in England, *via England*. No nation knows better than England the profit and prestige of centralizing the trade of the world in the hands of its merchants. They do the largest and most profitable part of the carrying trade, and London is practically the clearing house of the whole world.

At the lower end of British India we find the fertile island of

CEYLON.

During the fiscal year of 1879, Ceylon imported merchandise to the amount of \$23,000,000, and exported about the same amount. The list of imports includes upwards of one hundred and fifty different articles of manufactures and products from all parts of the world, and while we produce in greatest abundance the very articles they need we send them barely nothing. During this year there entered at the different ports of the island 7,077 vessels, of 2,560,000 tons. Of this fleet, six sailing vessels bore the American flag. Here is one place where an American house should be established.

Passing eastward and along the direct highway of that immense European merchant marine engaged in Chinese, Japanese and Malaysian trade we come to the

STRAITS SETTLEMENTS

and the city of Singapore. This is a great depot for British merchants, for supplying the surrounding markets, transshipping goods, &c. Imports are placed at \$50,000,000, embracing about the same class of goods as required by India and Ceylon. The American flag floats from no single vessel composing

the magnificent fleet of 2,200 ships of 1,200,000 tons yearly touching at Singapore, and there is not one American house located there.

Before leaving this section, I would refer to a transaction which shows the eagerness of even the most distant nations to trade with this country and what follows a little judicious advertising. About sixty days ago I received from an English engineer, attached to the Henzadi division of the government of British Burmah, orders for a large line of various goods, mostly made up of small agricultural implements, carriage hardware, wheels and spokes, etc. The indents, some ten or a dozen, were made on as many different American houses, all of whom are regular advertisers in the *American Mail*. He sent the orders to me with the request as a favor to ask our friends for the very best discounts, and to ship the goods direct to Rangoon, and draw on a London house for the amount of all invoices. He said that it was simply a sample order, to be distributed among the natives, and promised future business in case the goods were as represented and cheap. Anxious to serve him I had these goods all collected in New York and shipped them to Rangoon on a through bill of lading via Glasgow, Scotland, and made a bill of exchange on the London house. The next day a Wall street banker gave me a check for the amount, upon receiving shipping documents. The goods have not arrived out yet. It is not necessary to wait for the establishment of direct lines to this section. British merchants are only too happy to pocket the profits of this business. However, let us have at least one strong American house at Singapore. It is by far the most important point in the advancement of trade in this section, and to demonstrate still further this fact I present the following figures relative to the trade of those beautiful and populous and fertile territories composing the

DUTCH EAST INDIES.

STATEMENT SHOWING THE IMPORTS INTO AND THE EXPORTS FROM DUTCH INDIA, FROM AND TO THE PRINCIPAL COUNTRIES AND SETTLEMENTS.

From and To—	Imports.	Exports.
The Netherlands.....	\$20,000,000	\$53,300,000
Singapore.....	12,000,000	5,500,000
England.....	5,600,000	7,400,000
The United States.....	800,000	5,000,000
China.....	1,200,000	350,000
France.....	450,000	1,350,000
Australia.....	540,000	3,500,000
Siam.....	2,700,000	100,000
English Channel.....		4,000,000
All other.....	2,710,000	2,500,000
Totals.....	\$46,000,000	\$83,000,000

England, through Singapore, commands about one-half of this magnificent trade. Our consuls fail to give us much information about Java and Sumatra, but I know from extended correspondence with merchants at Batavia and Padang that there is every disposition to open up a more extended business with this country. In 1879 we sent to the Dutch East Indies about \$1,500,000 worth of goods. We should send them six times as much. I cannot too strongly urge and advocate the most active measures in securing some larger interest in the commerce of these rich islands.

SIAM.

In this country, which is ruled over by a most enlightened Prince, we find that the goods, of foreign make, consumed are mostly British and received via Singapore and Hong-Kong. They are valued at \$6,000,000.

THE PHILIPPINE ISLANDS.

Some remarkable facts appear in the trade of these islands. \$9,000,000 out of \$17,000,000 imports for the year 1878, are credited to British possessions. This, of course, means Singapore again. We will find out after a while that Singapore is an important port. England is down for another \$4,000,000, while the United States actually managed to send them the enormous amount of \$134,000. On the other hand we bought of them more than any other country, to the handsome amount of \$5,650,000.

Taking up the trade of the vast

CHINESE EMPIRE,

we find that we are mostly interested in the coast-wise trade transacted with the principal treaty ports.

The following shows the returns for 1878 of the treaty ports:

PRINCIPAL IMPORTS.			
Articles.	1877.	1878.	
Opium.....	\$44,576,000	\$46,781,000	
Cotton manufactures.....	27,865,000	23,242,000	
Woolen manufactures.....	7,101,000	7,070,000	
Metals.....	6,409,000	6,058,000	
Sundries.....	22,099,000	16,059,000	
Totals.....	\$108,041,000	\$99,210,000	
PRINCIPAL EXPORTS.			
Tea.....	\$49,010,000	\$46,420,000	
Silk.....	32,436,000	36,433,000	
Sugar.....	5,625,000	2,704,000	
All other exports.....	12,073,000	11,483,000	
Totals.....	\$99,144,000	\$97,400,000	

We are making quite satisfactory advancement in our cotton goods trade with China, but the export of British cottons, as compared with ours, is in the proportion of about thirteen dollars to one in value, and fifteen yards to one in quantity. I cannot do better in closing my remarks on China than to draw from the admirable and comprehensive report of Consul General Bailey, who says:

What is needed is that our manufacturers send a corps of experts who shall fully inform themselves as to the quality and price of all articles of all kinds in use in China, and then make them to suit the wants and needs of the Chinese markets.

If this is done, and China should abandon her repressive policy, as she seems about gradually to do, the possibilities of this trade are boundless.

To recapitulate:

1.—China is a vast country of great and varied resources.

2.—Her population equals the whole of Europe and America, and is engaged in every pursuit known to human industry.

3.—The past history of foreign trade with China for a hundred years shows a steady increase and development.

4.—The year 1879 as compared to former years shows a great increase and has been one of large profit.

5.—Navigation still shows badly for American enterprise and interest. We imperatively require a steam merchant marine.

6.—The future of trade with China never looked so promising as at the commencement of 1880, and only needs an intimate knowledge of the requirements of Chinese civilization to enable our manufacturers to compete with Chinese in the making of an infinite number of articles not now imported.

In examining the commerce of

JAPAN,

we find that Great Britain, as usual, carries off the honors. There appears to have been an increase in 1879 of both imports and exports from and to the United States. The Japanese are a discriminating people and they recognize the superiority of American goods, and with the Chinese they are fast concluding that the best are the cheapest. The great bulk of our imports into Japan is kerosene, and I find one item of \$3,000 worth of paper.

The Japanese make some very wonderful paper by their old processes, and a number of large modern paper mills have been built of recent years.

The total imports of Japan are set down at \$30,000,000 in 1879, and exports at \$25,000,000. Great Britain furnishes about two-thirds of the imports.

AFRICA.

In considering the commerce of Africa, the Southern division offers to the exporters of the United States the greatest opportunities for future business. Embraced in this division we find Upper and Lower Guinea, Senegambia, Cape of Good Hope, Natal, Mozambique, Zanzibar, and the islands of Madagascar, Mauritius and Reunion. The Northern division embraces Egypt, Tripoli, Tunis, Algeria, Morocco, and the Canary Islands. A *résumé* of African trade, North and South, shows:

British African trade, imports and exports, \$134,500,000
French ditto, imports and exports..... 106,500,000
United States ditto, imports and exports.. 6,500,000

AUSTRALASIA.

American merchants and manufacturers have been of late years greatly attracted towards opening up increased trade with the Australasian colonies, which have shown every possible disposition to do business with us. The two great international exhibitions at Sydney and Melbourne have been the means of increasing the reputation of our goods, and promoting our trade to a marked extent. So great has been the anxiety to secure a fair share of the trade of these wonderfully growing colonies that at times there is a danger of overdoing the business.

It has been said that the Australian colonies are more American than British. They certainly are very

much in sympathy with us as a people, and with our institutions; they want to trade with us, and complain bitterly that we deliberately exclude by adverse legislation various of their products, notably wool, which if admitted into this country on a more liberal scale of duties would enable them to buy more from us, and would furnish the return cargoes, the absence of which to-day prevents the growth of a direct merchant marine between the two countries.

British merchants are getting nervous at this state of affairs. As an instance of this an Australian house writes to a Birmingham firm: "I feel grieved to note that the American orders consist almost entirely of japanned iron goods, planes, carpenter's tools, electroplated goods, locks, cutlery, etc., the very items which seven years ago were supposed to be almost a British or Birmingham monopoly. Are your workmen losing their skill, or your employees their enterprise? Why do not the masters go to the foreign markets *en masse* and see what the Americans are doing? This utter inertness in another seven years' time will reduce our importations from England to almost nothing." To this the head of the Birmingham house adds: "I am sick and weary of the complaints reported by every correspondent that American goods are so much better than English." All of these charges are made by men who buy only American goods, because they are compelled to do so or forego business entirely.

We have gained certain advantages in the Australian markets, and have done so by hard, painstaking labor. But we must not rest here. We can easily take a foremost position in the trade of this section if we only proceed as we have begun. The total trade of the Australasian colonies during the year 1878, the latest official returns available, was as follows:

Colonies.	Imports.	Exports.
Victoria.....	\$78,547,000	\$72,541,000
New South Wales.....	71,777,000	63,015,000
Queensland.....	16,699,000	15,508,000
South Australia.....	27,780,000	26,026,000
West Australia.....	1,842,000	2,084,000
Tasmania ..	6,439,000	6,396,000
New Zealand.....	42,544,000	29,238,000
Totals.....	\$245,628,000	\$214,808,000

In this review of the commerce of the world, I have so far referred to countries that are not to any extent paper-making ones. Just to what extent these countries import and use paper I have no statistics at hand that I could call absolutely reliable. We know, however, that the vast business at which we have taken a hasty glance cannot be transacted without the use of paper.

The consumption of paper for commercial purposes bears a certain relative percentage to the gross amount of business transacted. This varies, of course, in all centres, and it would be quite impossible to state it even approximately. But the merchants who transact the trade of the world need paper, and are using it in increased quantities.

As the trade of the world is increasing so does the newspaper press. It is estimated that there are 32,000 to 35,000 newspapers printed and published in all countries. This country is credited with about 11,000 to 12,000. The remainder are mostly European, and the chances of supplying them with American paper may be small, but the press of South America and the colonies is by no means insignificant. This is especially the case with many journals published in the Australian colonies. As possibly of some interest to the manufacturers of news paper who may be present, I have with me some copies of foreign papers. I do not think that any paper maker present would object to receive a contract for such papers as the Melbourne *Argus*, Sydney *Herald*, &c. These are some of the papers which come to our office on our exchange list.

Having examined the general and gross trade of certain countries to which we should sell American papers, and considered the general possibilities and probabilities, can we conclude that there is a chance to sell American paper abroad, and that the trade is worth obtaining? I think that no one will say that it is not.

Aside from the countries I have mentioned, there are fair chances of introducing American papers, with other American goods, in certain European countries. In the north, Norway and Sweden and Russia; in the south, Spain, Turkey and Greece. Other countries are well supplied by their own mills,

although we are even now sending specialties and novelties to almost all European countries.

METHODS FOR EXTENDING EXPORTS.

A consideration of the third section of our subject, "the best methods to gain a foothold for American papers abroad and ultimately a profitable business," is closely connected with many of the most important questions and problems which are now puzzling our economists and legislators. It would be in order here to discuss the whole subject of our merchant marine; the causes which gave it its wonderful development in years gone by, until American tonnage reached the great total of 5,350,000 tons; to trace the cause of its decline, until, having made a present to Europe of its carrying trade, the United States virtually retired from the business.

It would be in order to consider how we were beaten in this immense business or how we beat ourselves. These and many other questions are involved indirectly in a discussion such as this. But we will have to confine ourselves to the present. The situation is that American paper makers want to sell some of their goods in foreign markets, and, having sold them, want to get them to their destination as soon as possible and at the least cost.

The advices and recommendations which have been given to American manufacturers in general on this subject are countless. They come from all quarters, and many of them are well taken. If manufacturers wish to act independently of each other they must depend on commission dealers here or abroad to present their samples and secure orders. It is hardly likely that any one manufacturer of paper could afford the expense of sending a traveler to distant parts of the world for this purpose. A commission house often represents many manufacturers, and is able to present a great variety of goods through its travelers in many markets and to an advantage. But the commission man is not always the most desirable means to an end. There are many commission men connected with the export trade who may surprise our manufacturers should they ever come in contact with them. There is one thing certain, the best of commission merchants or dealers are going to so build up their trade that they can hold it as long as possible. The average commission agent in the export line would try to persuade his foreign buyers that the goods he ships them were never made at all, that they grew mysteriously, and that no manufacturer had a hand in their creation. When a buyer comes to New York, especially if he cannot speak English, the commission man thinks he cannot see anything of this country except he accompanies him everywhere. When he cannot keep him in his office he walks, drives, eats and sleeps with him until his letter of credit is exhausted in buying just the goods the commission man thinks are appropriate for his country, and at just such discounts as are entirely satisfactory to the agent. The foreigner goes home, but he never sees an American manufacturer.

Then there is the old, highly respectable commission house, which has traded for years with some few South American ports. This house is so respectable and so conservative, that it throws its whole influence against the establishment of a steam line, the vessels of which would stop at their ports, and interfere with their way of doing business and their old sailing vessels. Then there is the type of agent who knows the way to put goods through certain foreign custom houses. I could never understand just where this fellow had the inside, but his orders to manufacturers generally call for the packing of two or three articles in one package, and to be invoiced as one article, and as weighing about one-half of the actual weight, and a good many little twists of this kind.

Then there is the commission agent who always asks manufacturers for two sets of invoices, one showing one or more extra discounts than the other. This man is undoubtedly under contract with his foreign buyers to purchase for them for a commission, and to waive all discounts. He does, of course, waive all which appear on the manufacturer's invoice, which he shows to the buyer.

Then there is still another, who buys for his firm, and calls on manufacturers for extra discounts, which he keeps a record of, I suppose, on his own personal books. He does not like to trouble his partners with a little thing like that. I don't want to be understood as saying or intimating that there are no

reputable firms among the export merchants of our leading seaports. I do mean to say, however, that it is a great question whether American goods have not always been put on foreign markets to a disadvantage, so far as cost is concerned, and I do say that it is mainly due to the fact that the average commission export merchant is too grasping in not being satisfied with a proper and reasonable margin.

There is hardly a centre of trade, in many of the countries to which I have referred to-day as desirable outlets for American goods, from whence I have not received protests looking toward this state of affairs. They say, "we like your goods, they are full as good if not better in quality, style and finish, but they cost 5, 10 or 15 per cent. more than similar goods of English, French or German make. We ordered a sample lot through Messrs. — & Co., of your city, and presume they treated us well. We are afraid we can only use the goods in limited quantities." Messrs. — & Co. may have felt justified in charging what they did, but it is likely they held their discounts, and it does seem that these cases show that such commission men are great obstacles rather than assistants, at times, in promoting foreign trade. It is more than can be expected of our American manufacturers, to make goods for export if middlemen are to thus handicap them.

Manufacturers should devise some means for putting their true and lowest prices for export in the hands of foreign buyers. This will also make them, and their name and reputation known in foreign markets. They will never be thus known through commission houses.

The names of Pirie & Whatman are as well known through all foreign markets as they are in this, and we will not forget them or their excellent products long after we have stopped using their goods. Are our Russells, Westons, Smiths and Cranes going to take ordinary means to make their names household words in the various markets, where they should, even now, be shipping their goods. They will never do it if it is left to middlemen to have their orders filled to suit their own fancies and with possibly their own brands substituted for the makers'.

In opening up foreign markets, American paper makers want to start rightly. More than one manufacturer has been discouraged by not beginning correctly. A certain manufacturer of coffins not long ago sent a large shipment to Rio de Janeiro. He took his chances without knowing anything of the conditions of the markets or the customs which throw the control of all interments in the hands of the clergy, who have their styles and ideas as to form and make of burial caskets. The result was, that as these goods were hardly applicable to other purposes, they were shipped back to this country. On the other hand, it took months, nay, years, for an enterprising dealer to introduce American stoves in Brazil. He had to explain their working, go to the houses to show why, through failure to turn a damper or some neglect, the dinner was badly cooked; but industry and perseverance succeeded, and he has a large and increasing trade. And yet there are people who point to the records and say that few American stoves are exported. They don't know that these enterprising dealers enter them for export as "manufactures of iron," knocking them down before packing and shipping. These peculiar methods of entering goods for export often make government figures of very little value, finding out special articles.

Right here I would call attention to a feature that seems to apply to most American goods. To many foreign merchants our goods are too superior in quality. I have no doubt that American paper makers will be asked to make poorer and adulterated goods to suit certain demands. Our cotton manufacturers have had this pressure brought to bear on them from all sides. The English are very solicitous that we should size our cottons until they are as poor as their own. While doing everything within reason to meet the views and tastes of our new customers, I should earnestly urge that no arguments should be allowed to persuade our paper makers to deteriorate the quality of our standard grades of paper.

It will be seen that close, hard, systematic work must be done to properly introduce, even in a small way, American goods in markets which are accustomed to a very different if inferior article. Somebody must do this work. Somebody must spend the

time and money to produce satisfactory results. Who is to do it? If you want your business well done do it yourself. This is an axiom that will apply as correctly to American paper makers in seeking an export trade as it does in the case of an individual. We are anxious to sell our goods to all nations; we have succeeded in obtaining from even our enemies the acknowledgment of the superiority of our goods and the willingness of different nations to purchase the same when properly presented. We find trouble, however, in properly presenting our manufactures. It must be done in the end, and the cost will be paid directly or indirectly by our manufacturers.

Why should not the paper makers of the United States take the matter in their own hands and make the effort by themselves and at their own direct expense? Why could not this entire business of seeking foreign markets be placed in the hands of one man? Let him be paid \$10,000 to \$12,000 a year. No less than this sum would obtain the services of the right man. Let every paper maker contribute toward this export fund twenty-four hours' run of his mill or an equivalent. Twelve hours' run, at a fair valuation, would produce a fund of upward of \$150,000. This assessment, all things considered, is small.

It is a bagatelle compared with the shrinkage in prices of the entire output of the mills caused by a small surplus production. Put these funds in trust, subject to drafts from the manager, audited by a finance committee. With sufficient funds in hand and the right kind of an agent or manager, immediate steps could be taken to open up trade with every important centre. Temporary correspondents could at once be selected at all points, in whose hands samples could be placed and from whom all information relative to the wants of the different countries could be obtained. This information is absolutely essential to a proper and intelligent conduct of this great business. It would, of course, be necessary to pay these correspondents for their trouble, and until a direct representative, located so that he could assume charge, could be chosen, it would be desirable to allow a commission to these correspondents for such business as they could influence. In fact, a good many very strong and active helpers would present themselves during this preliminary campaign. The result of such a direct and united effort would be that American paper makers would know *themselves* through their own employees the exact wants of every market. As the movement progresses it will be found advantageous to establish permanent branch offices at all strategic points, as, for instance, Vera Cruz, Rio, Valparaiso, Auckland, Melbourne, Sydney, Singapore, Calcutta, Bombay, Cape Town, Alexandria, and London. It would not be necessary at first to have representatives at these places *solely* in your employ, but it would be desirable to be represented by men thoroughly conversant with American goods, as well as acquainted with the wants of the section under his direction. The nature of the arrangements that would be best to make with these representatives would depend on circumstances. Under no conditions would it be well to accept the services of any individual or firm, whether sent from this country or resident at the place of operation, except he could fully put himself in harmony with the workings and objects of the home office. As a rule, in the start, a proper principle to follow would be to pay direct compensation or salaries where the services can be specifically defined. For instance, if American papers cannot be supplied to the publishers of Rio and other points unless a stock of their sizes and weights are carried in store for them at Rio, it should be easy to establish what would be a fair compensation to be paid some house at Rio to receive, take charge, and store and deliver the paper to the regular customers.

There would be but little objection to paying a rate of commission to cover these services after the trade was worked up and thoroughly understood. Do not be alarmed at recommendations looking toward a direct assessment, and paying cash as you go. If paper makers do this business themselves, this is the only way to proceed. I know the general reluctance we have to put our hands in our pockets, when there is a chance to get some one to put up for us. But we are often so anxious to gain this point that we in the end surrender much more than we in-

tended to. I have known paper makers who were so very anxious to sell dealers at a half cent above a cash market price that, in consideration for the orders, they have paid the same dealers a half a cent per pound above the market value for the stock out of which they made the paper. They were anxious to have some one else sell their paper for them, or they had a constitutional objection to paying cash for stock.

Depend upon it, that if American paper makers want to secure foreign trade to any marked extent and in any reasonable time, it will cost money, and that they will pay for it themselves, no matter in how indirect a way the business is worked up. Now, if all this effort and outlay should only result in getting rid of a surplus, thus keeping the home market healthier, I contend that it will be cheap. Five per cent. surplus actually on the market, or the moral effect of 10 or 20 per cent. unemployed capacity, hurts prices beyond measure. If by getting rid of the surplus the market could be prevented from falling off $\frac{1}{4}$ of a cent per pound, it effects a saving of \$12,500 a day on the total capacity. If only $\frac{1}{8}$, \$6,250 per day. American paper makers could afford to appropriate a full million of dollars yearly towards this result.

And, again, what incalculable benefits would arise by securing a sufficient foreign trade to not only keep mills running to their capacity, but to enable you to increase your production, and consequently decrease the cost in a measure.

The plan I have suggested in mere outline has another important advantage. Its magnitude and boldness will attract attention the world over. There is every probability that every one of the thirty odd thousand newspapers of the world would notice this great undertaking, and American paper and paper makers would be advertised in by far the most effectual manner possible. Again, these newspapers whose attention you attract so fully are all possible customers of the future.

SHIPPING FACILITIES.

Leaving this phase of the question, and assuming that some definite and effective plans will be adopted toward disposing of a certain percentage of paper abroad, it is in order to examine the present facilities for shipping goods abroad and to discuss the methods of improving the same. It is often asserted that it is next to useless for American manufacturers to try to sell their goods abroad. That after they have sold them, it is quite impossible to get them to their destination at a reasonable cost. There is a grain of truth in this. But things are not quite as bad as represented. It is possible to ship goods from our leading seaports to all quarters of the globe at fair rates of freight. Of course, in many directions the routes are not direct, and in others the vessels, especially sailing ones, are slow and old. But there are to-day sufficient facilities for the purpose of enabling American merchants and manufacturers to make preliminary attempts at least. That the bulk of the ocean carrying trade is at present in the hands of foreigners, and operated by foreign capital and foreign ships, seems to me of secondary importance. Let us use their ships and pay them a profit on the freighting business until such times as it is demonstrated that we can do it to better advantage ourselves.

To show some of the present facilities for getting our goods abroad, I give the number of regular lines of steamers and sailing vessels from our principal seaports.

From New York—	
Lines to West Indies.....	12
" Mexico.....	2
" Central America.....	7
" South America, East coast.....	5
" West.....	3
" Africa, West coast, and South Africa.....	6
" British India.....	4
" Australia.....	4
" China and Japan.....	4
" Mediterranean ports.....	3
" European.....	35
From Philadelphia—	
Lines to Queenstown.....	1
" Antwerp.....	1
" Central America.....	1
" of sailing packet to the West Indies.....	1
From Boston—	
Lines to Australia.....	1
" Europe.....	7
" Azores, &c.....	1
From Baltimore—	
Lines to Europe.....	9

From San Francisco—
Lines to Australia..... 1
" " China and Japan..... 1

In saying that I consider the fact that we have to pay freights in most cases to foreign ship owners, if we wish to export, as of secondary importance, I do not wish to be understood as not attaching sufficient importance to the present and future condition of our merchant marine.

As I believe most firmly that the manifest destiny of these United States is to become the great exporting nation of the world, so I believe that the time will come when the nation's flag will float over by far the largest number of cargoes which leave our shores. It is not only desirable that such should be the case, but it is absolutely necessary. The sooner we take the most advanced and energetic steps towards creating such a merchant marine as will be a credit to us and will again put us foremost in the world's commerce, the sooner will we work out our destiny.

I have before advanced the proposition that to have a thing done well you should do it yourselves. This axiom is applicable to a nation as to an individual.

The question as to how we are to build up our merchant marine is a vast consideration. Theories and suggestions are innumerable. It does seem as though we should gain knowledge from the experience of others. European nations—especially England—have never hesitated to grant liberal subsidies to new steamer lines, and have never withdrawn them until thoroughly established. Although our government has virtually subsidized to a vast extent the great transcontinental railroads which have done so much toward developing the country, and also practically subsidizes postal routes through howling wildernesses where a mere handful of letters is carried, the term subsidy has, through the convenience and for the purposes of our petty politicians, become obnoxious, and we will have to forego obtaining any direct subsidy for the benefit of American commerce. But I look forward hopefully to the adoption by our government of a policy which will insure a regular compensation for carrying their mails, to any one who will build American steamers of sufficient size and sail them to any foreign ports. This compensation should be liberal in amount and graduated according to frequency of carriage.

Again, without advocating the repeal of our old navigation laws, there are many little requirements and exactions under these laws which can be readily done away with, much to the relief of American ship owners.

Again, there are many features of our tariff which can be modified, thus bringing about changes which in themselves will produce effects most beneficial in the enlargement of our trade with countries which will want to sell to us, as well as purchase from us. This whole subject is vast, and a fortunate solution to it is fraught with almost incalculable advantages to this country.

In this connection I would call attention to the report of the sub-committee of the Congressional Committee on Commerce, of which my fellow manufacturer, Hon. W. A. Russell, of Lawrence, is chairman. Mr. Russell's report is exhaustive and able.

And now the question occurs: Has the Paper Makers' National Association, as an association, taken sufficient interest in all these great subjects affecting so materially the future of the trade which it represents and the whole country? Why is it not proper that the voice of this association should be heard? Should it not study these questions carefully and always have its representatives on hand when they are being discussed. As the representatives of, in some respects, the foremost American industry, your opinions would be entitled to and receive the greatest respect. During the next few years these great issues must be met. Let it not be said that the American Paper Makers' Association took no active part in the settlement of questions of such vital import to themselves and the nation at large.

In closing this paper I submit a schedule of tariff and import duties on paper, stationery and books, of all countries.

TARIFFS AND DUTIES.

India.—Paper and stationery, 5 per cent.; paper, free; books, free.
Straits Settlements.—Paper and stationery, free; books, free.

Ceylon.—Paper and stationery, free; books, free.
Mauritius.—Paper and stationery, 6¼ per cent.; books, free.
Labuan.—Paper and stationery, free; books, free.
Hong Kong.—Paper and stationery, free; books, free.
Australia, N. S. W.—Paper, 3s. 4d. to 9s. 4d. per cwt.; stationery and books, free.
Australia, Victoria.—Paper and stationery, part free, part 3s. to 18s. 8d. per cwt., part 10 per cent.; books, free.
Australia, S. A.—Paper and stationery, part free, part 3s. 4d. per cwt. and 10 per cent.; books, free.
Australia, W. A.—Paper and stationery, part free, part 10 per cent.; books, free.
Australia, Tasmania.—Paper and stationery, 1s. 6d. to 4s. per cubic foot, part free; books, free.
Australia, New Zealand.—Paper and stationery, 10 per cent., part free; books, free.
Australia, Queensland.—Paper and stationery, 5 per cent.; books, free.
Fiji.—Paper, 3s. 4d. to 9s. 4d. per cwt.; stationery and books, free.
Falkland Islands.—Paper, stationery and books, free.
Natal.—Paper and stationery, 6 per cent.; books, free; reprints British copyright, 2½ per cent.
Cape Good Hope.—Paper and stationery, 10 per cent.; books, free.
St. Helena.—Paper, stationery and books, free.
Lagos.—Paper, stationery and books, 4 per cent.
Gold Coast.—Paper, stationery and books, free.
Sierra Leone.—Paper, stationery and books, free.
Gambia.—Paper, stationery and books, 2 per cent.
Dominion Canada, including Ontario, Quebec, New Brunswick, Nova Scotia, Manitoba, Prince Edward Island, British Columbia and Vancouver's Island.—Paper and stationery, 20 to 30 per cent.; books, 3d. per pound; Bibles, &c., 5 per cent., by retail, 3d. per 100.
Newfoundland.—Paper and stationery, 13 per cent.; printing paper and books, free.
Bermuda.—Paper and stationery, 5 per cent.; books, free.
Honduras.—Paper and stationery, 10 per cent.; books, free.
Bahamas, W. I.—Paper and stationery, 20 per cent.; books, free.
Turks and Islands, W. I.—Paper and stationery, 10 per cent.; books, free.
Jamaica, W. I.—Paper and stationery, 12½ per cent.; books, free.
Virgin Islands, W. I.—Paper and stationery, 7½ per cent.; books, free.
St. Christopher, W. I.—Paper and stationery, 8 per cent.; books, free.
Nevis, W. I.—Paper and stationery, 12½ per cent.; books, free.
Antigua, W. I.—Paper and stationery, 6 per cent.; books, free.
Montserrat, W. I.—Paper and stationery, 7½ per cent.; books, free.
Dominica, W. I.—Paper and stationery, 10 per cent.; books, free.
St. Lucia, W. I.—Paper and stationery, 10 per cent.; books, free.
St. Vincent, W. I.—Paper and stationery, 6½ per cent.; books, free.
Barbadoes, W. I.—Paper and stationery, 4 per cent.; books, free.
Grenada, W. I.—Paper and stationery, 5 per cent.; books, free.
Tobago, W. I.—Paper and stationery, 7½ per cent.; books, free.
Trinidad, W. I.—Paper and stationery, 3½ per cent.; books, free.
British Guiana.—Paper and stationery, 5 per cent.; books, free.
Gibraltar.—Paper, stationery and books, free.
Malta.—Paper, stationery and books, free.
Argentine Confederation.—Printed matter, 35 per cent.; unbound books, 5 per cent.; paper and bound books, 25 per cent. ad valorem.
Mexico.—Not stated.
Egypt.—Not stated.
Peru.—Not stated.
Algeria.—Not stated.
New Grenada.—Not stated.
Siam.—Not stated.
Bolivia.—Not stated.
Austria.—Paper for printing and writing, common coarse gray, half white or colored, and unsized printing paper, per cwt., 3s. 3¼d.; fine and full-sized paper, per cwt., 3s. 3¼d.
Belgium.—Paper for printing and writing, per cwt., 1s. 7¼d.
France.—Paper for printing and writing, import duty, per cwt., 3s. 3d.; excise duty in addition. Foreign post, tissue and similar papers, per cwt., 6s. 4d. Letter paper, per cwt., 4s. 7¼d.; other writing and printing paper, per cwt., 4s. 3¼d.
Germany.—Paper all kinds, 10 marks per 100 kilograms.
Holland.—Paper for printing and writing, 5 per cent. ad valorem.
Italy.—Paper for printing and writing, white or colored, 4s. ¾d. per cwt.
Portugal.—Paper for printing, per cwt., 3s. 6¼d.; for writing, per cwt., 23s. 7d.
Russia.—Paper for printing and writing, unsized white or colored without ornaments, 19s. 8d. per cwt.; sized, same conditions, £1 9s. 7d. per cwt.
Spain.—Paper for printing and writing, uncut for printing, unsized or half-sized, per cwt., 4s. 3¼d.; uncut for writing, per cwt., 12s. 2d.; cut and hand-made paper, £1 2s. 9d.
Brazil.—Blank books, 1,500 reis per kilogram; printing and wrapping paper, 20 reis per kilogram; writing paper, 140 reis per kilogram; cardboard, sheets, 100 reis per kilogram; cardboard, cut, 300 reis per kilogram. ad valorem.
Sandwich Islands.—All free.

United States of Colombia.—Pasteboard, 15c. per kilogram; blank books, 40c. per kilogram; printed books, free; printing paper, white or colored, free; gold and silver paper, 50c. per kilogram; all other paper, 15c. per kilogram.
China.—Paper, 5 per cent. ad valorem; stationery, free.
Japan.—Books, printed free; paper and stationery, 5 per cent. ad valorem.
Chili.—Paper, free; books, free.

Ecuador.—Books, blank, per kilogram, 25c.; books and pamphlets, religious, artistic, scientific and school, free; novels, &c., per kilogram, 75c. Paper.—Writing, 12½c. per kilogram; wall, 14c. per kilogram; music, 12½c. per kilogram; drawing, 12½c. per kilogram; blotting, 12½c. per kilogram; gold and silver, 50c. per kilogram; printing, free. Stationery, 25c. per kilogram.
Peru.—Books, blank, valuation 50c., 30 per cent.; books, printed, valuation \$1, 8 per cent.; fancy binding, \$5, 8 per cent.; paper, 30 per cent.; or news, free; collars, &c., per gross, \$4, 30 per cent.; music, per ream, \$8, 15 per cent.; roofing, per kilogram, 15c., 10 per cent.
Venezuela.—Blank books and stationery, 5c. per kilogram; paper, printing, free; roofing, 2c. per kilogram; collars, &c., 25c. per kilogram; gilded, &c., 50c. per kilogram, wall, 15c. per kilogram.

It will be observed that, as a rule, rates are low and in no case prohibitive.

Aside from the tabular matter, which has been in preparation for some time, I have not been, through press of business, able to give the time I should have liked to this subject. As a whole, my remarks may appear crude; but if I have succeeded in calling even transient attention to a problem of such great importance I am satisfied. One thing is certain, this country must advance its relative position in the world's commerce or fall behind. Other nations must force trade or have none. The United States alone would seem to think that other peoples must come to them for goods which are laid at their doors by other nations. This is a vast mistake. Does the paper trade fully appreciate it, and is it willing to do its share towards placing our country in the position she should occupy?

GLASS IMITATION OF TORTOISE SHELL.

An invention for producing in glass an imitation of tortoise shell has lately been perfected by Herr Francis Pohl, a German chemist, in conjunction with S. A. Wittmann, a London glass merchant.

In carrying out the invention a bulb is blown of a dark brown glass, and another of a light brown glass, and these bulbs are broken into fragments of various sizes, or several bulbs of different shades of brown are blown and broken into fragments. A bulb of plain glass is then blown, and the upper part is cut off from the lower part, which adheres to the blow pipe. While the plain glass bulb is being blown a second blower blows another bulb of plain glass, and dips it in and rolls it among the fragments of brown glass, which are thereby made to adhere to the bulb. The bulb with the fragments adhering thereto is then inserted in the cut-off portion of the first named plain glass bulb and the two are then blown together. The whole is next rewarmed and swung and drawn out as one bulb, and treated in the manner ordinarily practiced in preparing glass for the manufacture therefrom of vessels and other articles. When the fashioning of the vessels or articles is completed they are coated or painted with a solution of chloride of silver and yellow ochre or with other suitable materials for producing a yellow stain, and afterwards fired.

The tendency of paper when gummed (in the case of postage stamps, labels, &c.) to curl up is very tiresome, and much waste is often caused through tearing. It is said that this evil may be avoided by adding a little salt, sugar, and glycerine, to the gum, very little of the latter however, because otherwise the gum does not dry thoroughly. The gummed paper, also, must not be dried in too great a heat. Another peculiarity of gummed paper is its greater liability to curl up the thicker it is. The thinnest paper possible under various circumstances should therefore be used.

THE PAPER TRADE IN THE CITY OF NEW YORK.

[Continued.]

Three generations of paper makers form the subject of this article. Reference was made at the beginning of this series to the firm of W. & C. Valentine doing business in 1805 at 228 Front street, in this city, under the style of "paper merchants." The firm consisted of father and son, William and Caleb Valentine. William Valentine came of an English family which settled during the latter part of the seventeenth century in the neighborhood of Hempstead, Long Island. The family obtained a large grant in that vicinity, and appeared to have improved its opportunities so well that, a hundred years later, some of its members at least were possessed with a good deal of means, as will be shown by facts presently to be submitted.

When, where and how William Valentine first became engaged in paper making cannot now be ascertained, but it is likely that he pursued it somewhere prior to the beginning of the present century, because a deed still in the possession of his grandson—William H. Valentine, of Roslyn, Long Island—shows that in February, 1801, he and his eldest son Caleb purchased two paper mills at Roslyn. These mills were in operation before the Revolution, and it is even said that one of them was in existence and making paper for some time previous to that struggle, so it is not improbable that William Valentine, when a boy, worked here as an apprentice. One of these mills is still standing and in operation, and must be nearly a century and a half old. It may well be doubted if there is another mill in this country half as old. This veritable antiquity was painted by Cropsey in 1852, as "A Pioneer Paper Mill." The older mill stood a little higher up the glen and was according to the Valentines the first paper mill built on Long Island. The deed above referred to is made by William and Benjamin Onderdonk, and conveys to William and Caleb Valentine the two mills just spoken of, together with some houses and a large tract of open and wooded land in the neighborhood, for \$15,500, which it may be remarked looks like a very large sum for those days. So the Valentines must have been men of large means in their time, and no doubt too, the Onderdonks were hard bargainers. The date of the deed is February 28, 1801.

It is probable that the Valentines set up as "paper merchants" in this city about the time of the purchase of these mills; indeed, it is possible that they began the business even earlier, because their descendants have no records except the deed, and in the file of directories from which I first obtained their names all of the numbers between 1790 and 1805 are missing except one, that of 1802-3. The firm of W. & C. Valentine is mentioned in the directory of 1805, but not in that of 1802. Yet it might have been in existence some years previously, because the imperfections of directory making then would easily account for its omission from the latter. The firm continued to be W. & C. Valentine until about 1811, when Caleb sold out his interest in it to his younger brothers, Jacob and William, and David Buck who had married his sister. Then the name was changed to W. Valentine & Sons. It is matter for regret that no record remains of the sum Caleb got for his interest, to furnish evidence of the value of a half share in a flourishing paper business seventy years ago.

The elder William Valentine and all of his sons have long been dead, and the information to be had now concerning the details of their business are mere traditions handed down from father to

son. Still, traditionary evidence is not without value, and is always interesting, so that a glance at these traditions will not be waste of time.

A small stream trickles through the deep glen in which Roslyn is built, and this is now dammed in two places at different levels, so as to form two spacious mill ponds. The upper dam, on which is built the paper mill that still stands, was thrown up before the breaking out of the Revolutionary War, to furnish water power for a grist mill that occupied very nearly the same site as the paper mill. Such, at least, is the information derived by the present generation of Valentines from an old negro, who died at a great age when they were young men. On the east side of the pond, a short distance above the dam, was the paper mill already referred to as the first built on Long Island. Both mills were operated by the Onderdonks at the time they were purchased by the Valentines; but, of course, then, as for more than a quarter of a century afterwards, paper was made in them by hand. The older was a one-vat mill, and this the Valentines ran on wrapping paper, of which they made about ten reams per day. Ten reams were then considered a day's work. This wrapping paper was made of a mixture of fragments of old rope, paper shavings, and worn out playing cards. It was of a dark-brown color, tough and very much in demand, so much so in fact that it was next to impossible to sell any writing paper without throwing on some sheets of wrapping. The wrapping paper sold readily at \$1 a ream. The "new" mill had two vats, one of which was run on printing and the other on writing paper. Wm. M. Valentine, from whom most of these particulars have been obtained, says that he is under the impression that the daily product of this mill was ten reams of writing and five reams of printing paper, and he places the printing paper at half the quantity of the writing—notwithstanding that ten reams of any kind of paper was considered a day's work—because of the difference in the size of the molds, which admitted of two sheets of writing paper being made in the same time as one sheet of printing paper.

In 1816, owing, says the same authority, to the great influx of foreign paper following the termination of the war of 1812 and the consequent decline in the price of domestic paper, William Valentine & Sons failed. At the subsequent sale of their effects, the paper mill property in Roslyn was purchased in the name of Mrs. William Valentine, Jr. (the mother of my informant), whose maiden name was Meyers and who owned considerable property in her own right. Notwithstanding the failure, W. Valentine & Sons continued the business in New York until about the end of the year 1823; but in the year 1816 they moved from 228 Front street to next door, 230, where they remained to the end. In 1824 they were succeeded by Peter Hegeman, who had been a clerk with them for many years. Hegeman was a native of Cedar Swamp, Long Island, and is said to have belonged to the same family as the present New York druggist of that name. Peter Hegeman was burnt out finally, and as his name drops out of the Directory at the close of 1828 it is probable that the fire occurred at that time.

According to his grandson, William Valentine, Sr., died between 1822 and 1825. As the firm was broken up in 1823, its dissolution was in all likelihood caused by that event. His son William, whose wife had purchased the Roslyn mills, continued to make paper there until after 1860. At first he was assisted by his two sons, William M. and Meyers. The former abandoned paper making and set up a general store, which he is

still keeping in person, although over seventy years old. Meyers Valentine remained with his father, inherited the mill property and is still operating it.

About 1830 the old hand-making process was abandoned, and the mill was furnished to make paper by machinery. Some time before the Valentines had begun to make a thick wrapping paper from old rope, for hardware purposes, and after the change of methods from hand to machinery this paper was made thicker by doubling the sheets and uniting them by pressure. Between 1830 and 1834 they began to make wrapping paper from straw. This was made in large and small sizes, and some parcels were afterward colored blue to meet the taste of customers. By degrees the manufacture of writing and printing papers was dropped, and about twenty years ago the manufacture of straw board was substituted for that of wrapping paper. In 1863 William Valentine retired, and he died in 1864. Meyers Valentine and his son John still carry on the mill. About nine years ago they added a steam engine to the mill, thereby doubling its capacity, which is now about six tons of straw board per week. The mill is run exclusively on straw board, for which the sun drying process is adhered to exclusively. A peculiar kind of straw board has long been made at this mill to make a surface on the bottom of vessels upon which to lay the copper.

[To be Continued.]

APPLICATION OF SCIENCE TO POSTAL METHODS.—In order to render reliable as possible the registering of the number of letters sent by mail during any one year or any given period, H. Ferguson and H. R. Kemp, of the General Post Office, London, have invented a mechanical and electrical method. In the first case, a small counter, similar to an engine counter, is placed in the head or handle of the hand stamp, and each time the stamper presses it upon a letter it is registered upon the counter. At the close of the day the stamp is opened, the number of letters stamped read off and registered, and the counter set ready for the next day's work. In the second case, two methods have been devised for electrically effecting the object. In one, the striking of the inking pad causes electrical contact to be made, which transmits a current to a counter similar to that of a gas meter, and so registers every letter stamped.

For rendering fabrics and paper impermeable to water, Mr. Brooman has patented the following process: Nitrate of potassium (saltpetre), 200 pounds; resin, 270 pounds; gum, 30 pounds; slacked lime, about 100 pounds. A milk of lime is first prepared, then the saltpetre is dissolved in water and heated in a boiler, then so much lime is added that it does not become pasty, when the two other substances which have been fused on a slow fire are added. This composition can be left to cool, and being unalterable can be kept for use. To render tissues waterproof, 100 pounds of this mixture are dissolved with one gallon of boiling water, while on the other hand 10 pounds of alum are dissolved in 10 gallons of water. The fabric is first passed into the first solution and then into the second, and finally dried between the cylinders. Paper and other goods can be treated in the same way. For white paper the gum is omitted.

William Graham, of Liebenroth, Von Auw & Co., returned on Tuesday from Scarborough Beach, Me., where he has been enjoying the cool breezes of the Atlantic for the past month.

BASE BALL PLAYING IN THE PAPER TRADE.

Following is Mr. Chadwick's report, in the *Brooklyn Eagle* of August 8, of the contest between picked nines of the paper and paper stock houses of Beekman and Duane streets, played at Prospect Park, August 6. Mr. Chadwick says: On Saturday last the field located at the north-west corner of the parade ground was the scene of a contest which was of more than ordinary interest, from the fact that it was a battle on the green between picked nines, not of two commercial houses, but of a number of firms located in two different streets, one nine representing the wholesale paper houses of Beekman street, and the other those of Duane street. To give éclat to the affair a liberal subscription had been raised for the purpose of closing the day's proceedings with a supper at the Sea Beach Palace Hotel, Coney Island, and this it was which had a special attraction for the "bosses" of the different firms, many of whom were, in consequence, attendants at a base ball match for the first time since they were boys. Indeed, a notable feature of the gathering at the match of Saturday was the crowd of paper merchants, who after reaching the field soon got worked together into two opposite assemblages, one side of the field of spectators being occupied by the Beekman street "bosses," and the other by those of Duane street; and whenever "our side gained a point, applause would come from the right quarter, while the other side's fellows kept mighty quiet. The Beekman street nine was captained by that old Nameless club first baseman Pirnie, while Captain Scott held the other nine in hand. To both was the contest an event of the year. Before the game began the Duane street nine, with their club caps and their sanguine looks, were the favorites with the lookers on, who knew nothing of the dark horses on the other side. But to see Captain Scott marshal his forces and Graham prepare his battery for the attack on the Beekman street crowd, was simply to see evidences of coming triumph in their every action. This was the feeling until the first inning began, but when the "Pirney gang" had scored four runs to start with, and "Scott's fellows" had been retired for a couple, the Duane street people did not feel quite so sanguine; and when the first part of the third inning had ended and the score stood at 8 to 2, in favor of Beekman street, there was a decided change of feeling on the subject of that sure victory that the Duane street crowd had talked of. But just at this time a very weak spot was developed in the Beekman street field, and that was at right field, which proved to be a wrong field for the side that was out in the field, and when the Duane street had scored five runs, with but one man out, and the score stood at 8 to 7 only, Captain Pirnie began to look wild, and Captain Scott's eyes glistened with the revulsion of feeling caused by the desirable change in the score. It was just at this time that the bosses on each side became interested, and those who did not know the game began to make inquiries and to demand instructions as to the points, while others put up stamps on their respective employees, and things generally became exciting. But in the fourth inning the Duane street field went back on their battery badly, and the pitcher losing his head a little gave the Beekman street fellows chances for base hits, even McNally getting one to his own and everybody else's astonishment. Then, too, one of the Beekman street dark horses—Maynard—made a clean home run, thereby scoring the only earned run of the game. Before the inning ended the Beekmans had seen the Duane 5, and had gone 5 better, the score at the

close of the even fourth inning standing at 13 to 7, and at the end of the fifth at 14 to 7, the Duanes being handsomely blanked. When the first part of the sixth inning ended the Beekmans' total had reached 20, while the Duanes' figure was but 9, over two to one, with Duane stock at a discount, and Beekman paper not to be had except at a high premium. Captain Scott looked desperate, and Graham had a savage glance in his eye, and in the crowd the over sanguine Duane men began a system of hedging in their investments on the match. But once more a change occurred, and our nine—as the Duane bosses called the Scott battalion—astonished Pirnie's gang by making a brilliant rally to recover their lost ground. Graham led off by striking out, but Goodsell had a life given him by the umpire's erroneous decision, as Pirnie put him out nicely at the base but Mr. Duburrow didn't see it. Then Scott had a life given him by May, and just at this time Duncan came to the rescue with a two-base hit; Barnes then fouled out, after which Wallace and Benjamin made base hits and May and Scott had their bases given them on balls. Here had nine men been to the bat and five runs had been scored, and things began to look serious to Pirnie. Now it was that Graham hit for two bases and sent two men in, and Goodsell hit for another and sent Graham home. Eight runs in and two runs out only, and Pirnie getting red hot. Scott now came to the bat with a home run look in his eye, but unluckily he hit a high ball to Pirnie's district, and that ended the inning, leaving the totals at the respectable proportions of 17 to 20. "Three runs to get, boys, and we tie them," was Scott's exclamation, and then the Duanes went to the field to blank the Beekmans, but Benjamin dropped a fly ball and Graham made a wild pitch, and in came two men when all should have been out for a duck egg. This left the Beekman total at 22 to 17 by the Duanes, and now it was that the Beekman fielders put out their opponents in professional style in succession, Hethkamp and Pirnie disposing of Duncan; Maynard catching out Barnes on a sharp fly tip, and the two former disposing of the third man Wallace in handsome style. The eighth inning was commenced and Close made a home run; but shortly after the game was called, and the score was left as follows:

BECKMAN.

	R.	IB.	P.O.	A.	E.
Maynard, p.....	3	1	1	3	1
Chichester, c.....	1	1	9	0	3
Pirnie, 1b.....	3	1	9	0	1
Close, 2b.....	2	0	1	0	1
Hethkamp, 3b.....	5	3	0	2	3
Fish, s. s.....	3	2	0	0	1

Innings.....

Beekman.....	4	1	3	5	1	6	2—22
Duane.....	2	0	5	0	2	8	0—17

First base by errors—Beekman, 13; Duane, 6.

Earned runs—Beekman, 2; Duane, 2.

Umpire—Mr. Duburrow.

Time of game—3 hours.

Struck out—Beekman, 10; Duane, 7.

Of the play in the match, that of the Beekman street battery was especially noteworthy, Maynard doing effective work in pitching, and Chichester catching admirably. On the other side the battery, too, was well handled, Captain Scott doing good service behind the bat, where, despite of errors he put out a dozen players and assisted three times, a sharp fly tip catch being noteworthy. Twelve struck out off Graham's pitching, and seven off that of Maynard. The Beekman nine made the most catches—nine—the other side making but five, one of which was by Duncan, the only one in the out field, from a fair ball, Barnes taking a foul fly well, Scott making all the others. On the Beekman side good catches were made by Close, Beebe and Pirnie; Chichester making all the others. After the game a good social time was had at the Sea Beach Palace.

IMPROVED CARDINAL INK FOR DRAUGHTSMEN.

The solubility of carmine lake in caustic ammonia is attended with this disadvantage—that in consequence of the alkaline properties of ammonia, the cochineal pigment will in time form a basic compound, which, in contact with a steel pen, no longer produces the intense red, but rather a blackish color. To avoid this evil, the *Polytech. Notizblatt* recommends to prepare the ink as follows: Triturate 1 gram of pure carmine with 15 grams of acetate ammonia solution and an equal quantity of distilled water, in a porcelain mortar, and allow the whole to stand for some time. In this way a portion of the alumina which is combined with the carmine dye is taken up by the acetic acid of the ammonia salt and separates as precipitate, while the pure pigment of the cochineal remains dissolved in the half saturated ammonia. It is now filtered and a few drops of pure white sugar syrup added to thicken it. In this way an excellent red drawing ink is obtained, which holds its color a long time. A solution of gum arabic cannot be employed to thicken this ink, as it still contains some acetic acid, which would coagulate the bassorine, one of the natural constituents of gum arabic.

A brilliant black is produced on iron and steel by applying, with a fine hair brush, a mixture of turpentine and sulphur boiled together. When the turpentine evaporates there remains on the metal a thin layer of sulphur, which unites closely with the iron when heated for a time over a spirit or gas flame. This varnish protects the metal perfectly, and is quite durable.

No moisture required.

Every child wants it.

THE PLATINUM PROCESS IN PHOTOGRAPHY.

The platinum printing process in photography, which is rapidly growing in popularity, and which gives results very much superior to those attained by the common process of silver printing, is the outgrowth of the work of investigators in the field of photographic chemistry to discover a method that would give permanent prints, in which quality silver prints are notoriously lacking. The platinum process has lately been greatly improved and simplified, so that now it gives very reliable results with ordinary care.

In what follows, the process is described in its improved form, from a more extended account given by John Carbutt, a well known expert in photography: The chemicals made use of are ferric oxalate, potassic oxalate, potassic chloroplatinate and hydrochloric acid. One ounce of the ferric oxalate is taken, and from 40 to 60 grains of the potassic chloroplatinate is dissolved therein. This is the sensitizing solution, and is applied to the surface of the paper to be printed on, with a pad of flannel. The paper is first allowed to dry in the air, and then is perfectly dried with the aid of heat. It is now exposed to the action of light in the usual way, either under the negative in a printing frame, or, in case an enlargement is required, in the solar camera. The print thus obtained is developed in a hot solution of potassic oxalate, afterwards washed in a bath of weak hydrochloric acid to dissolve out any iron salts that may remain in the paper, and finally it is washed in three or four changes of pure water. At first, after exposure, a faint image of the picture appears on the paper in ferrous oxalate, the iron salt being reduced by the action of the light from a ferric to a ferrous salt. The strongly reducing powers of the latter are developed by the subsequent treatment with potassic oxalate, in the presence of which the platinum salt is instantly reduced to the metallic condition wherever the light has affected the ferric salt. Where the action of the light has been strongest, the greatest amount of platinum is precipitated, and vice versa. The image, therefore, is obtained in finely divided metallic platinum, commonly known as platinum black.

From the well known power of resistance, or indifference, to the action of the most powerful chemical agents which platinum is known to possess, the unchangeable character of these platinum prints may readily be inferred. In fact, prints by this process have been subjected to the severest chemical tests without having their permanence in the least degree affected. This highly admirable quality, the simplicity of the process, and the beauty of the pictures it affords, promise to bring the platinum process into very general use among photographers as a substitute for the silver printing process in common use.

SAFETY CHECKS.

A. Anthony Nesbit's patented invention for the prevention of check forgery is rapidly making its way into general favor. Being a distinguished analytical chemist, we may be sure that the invention under notice is no clumsy attempt; indeed, the check he produces is admitted on all hands to be absolutely unalterable. The *Morning Post* of February 18 gives the process as follows: "It must be remembered that to remove ink it is necessary to employ solutions which are either slightly acid or alkaline. He therefore prints the checks with a compound dye which is affected by both acids and alkalies,

but which is one color in acids and another in alkalies; in short, he prints his checks partly with an acid and partly with an alkaline ink. If our forger treats the check with a diluted acid the whole acquires the acid tint and the printed inscription is lost; and if thus baffled, he endeavors to repair his error by using an alkaline solution, the whole check becomes of the alkaline tint, and consequently the original color of the inscription is not restored. The same phenomena occur in inverse order if the alkaline solution be used first and the acid afterward. Even if our forger were to discover a perfectly neutral solution capable of removing writing ink—a discovery, by the way, very unlikely ever to be made—he would not have advanced a step; for, according to Mr. Nesbit's invention, it would merely be necessary to have the acid part stronger than the alkaline, or *vice versa*, and the immersion in a neutral solution would effect such complete blurring of the check as to render it entirely useless. As oxalic acid may be used with the ink, and as that acid does not affect type metal, the invention is applicable to almost all varieties of printing. Bicarbonate of soda can be employed as an alkali, thus insuring entire freedom from injury to the metallic plates used in certain methods of printing. Moreover, as bicarbonate of soda is not affected by the carbonic acid of the air, and as the oxalic acid can be used of any strength, and can be covered by a vehicle impervious to air, although perfectly soluble, there is no possibility of any atmospheric action on checks printed by Mr. Nesbit's process. Should the forger fall back on his old device of 'local application,' the chemicals used to prevent that method of alteration can still be employed; and, if desired, this invention can be used in conjunction with nearly all the so called 'secure papers.'"

—Stationer and F. G. Journal.

ANCIENT COINS IN SOUTH AFRICA.

Some interesting coins have lately been discovered along the Kaffrarian coast, opposite the spot where the East Indianman the Grosvenor was wrecked in August, 1782. There is little doubt that the coins formed part of the cargo of the vessel, or of the personal effects of some persons on board. Among the coins is one of silver, evidently one of the native pieces of money in India before the English conquest. There is another coin of gold, in an excellent state of preservation, apparently a sequin of the Venetian Republic. On one side is represented the figure of St. Mark, the patron saint of Venice, handing a long cross-headed staff to the Doge, who kneels before him arrayed in the ducal robes and wearing the well known biretta. Behind the figure of the saint is the inscription "S.M. Venet."—that is, "Sanctus Marcus Venetiae." Above the head of the Doge is the inscription "Dux," and behind him is the abbreviated name "Joan Cornal," which stands for that of the Senator who presided over the republic at the time when the coin was issued. On the other side of the coin is a figure, probably intended for that of Christ, enclosed in an oval border of stars, around which is the following inscription, "Duca. sit. I. XPI. dat. q. tu. regis. isti"—an abbreviation apparently of the words "Ducatum sit Jesu Christi Datum quod tu regis Isti."

A weak mind sinks under prosperity, as well as under adversity. A strong mind has two highest tides, when the moon is at the full, and when there is no moon.

LETTERPRESS COPYING BOOK,
Railroad and Bank Supplies.

AMONG THE BOOK STALLS.

By JOEL BENTON.

I have a fondness for discovering books that sends me frequently into all the book stores and stalls of a great city when odd hours permit, with some such relish, I imagine, as gloved on quaint old Isaac Walton's face when he dropped a line for a trout or grayling. But I cannot say, with Charles Lamb, that "when I am not walking I am reading." My craze, if I have one, is not steady enough or intense enough to be bibliomaniacal. I have no desire to accumulate scarce copies or scarce editions of books unless there is a good deal besides mere scarcity to recommend them. But I often find books that are scarce, books that are out of print and desirable to have, and I manage to secure them. I have purchased in this way within a year for the benefit of myself and two friends three copies of a little book that is in much demand, and that a competent authority declared (before I began to look) could not be found in the city where I found all three. [The editor and intelligent reader can easily excuse this preliminary confession, because, no doubt, it reveals also the state of their separate minds.]

This habit of searching for what you desire and have not got is really what gives zest to life itself; so that a good deal of pleasure comes often from the mere hunt—the anticipation. Of course you must be urged on by some slight probabilities. The thing may not be found, but the one chance in a hundred or more that it may be found supplies all the requisite stimulus. And in rambling among books especially, it is possible to make even your failures successes. One gets a good deal of benefit from merely reading the titles and skimming over the title pages and table of contents. A man who has this passion and follows it up has something which serves, in part, to make up the deficiencies accruing from a lack of a liberal education. If he does not know everything he soon becomes able to tabulate almost everything, and in some way absorbs through his eyes and fingers a good deal that to others comes only by long hours of study—or does not come at all.

I once said to a gentleman who was well known to fame when he lived, as I stood in his library one morning—a library which contained many thousand volumes—"It would be a great pleasure to stop in these rooms a week and read the titles of your books." He immediately proffered the privilege, but as the imperative railroad train must whisk me out of town that same day my view was cut short. My friend knew well enough the delight which stood at the bottom of my request, for he had been enjoying a kindred pleasure for many years while collecting his very diversified tomes and treasures. It gives me a veritable pang to think that, by the time this little sketch goes into type, or before, all these books will be sold, and go perhaps in a thousand directions. Some of them may appear in the book stalls and second-hand stores in due time, and the best and most of them will be bought, I suppose, not only by real book consumers for their intrinsic value, but many as keepsakes by those who wore his friends, and by those even who knew him not but who treasure his name and fame.

It is curious to see what books drift first and last into the second-hand stores and stalls. It almost makes one weary of giving books away to discover on what frail cobwebs this touching—or what should be touching—expression of friendship hangs. On the fly-leaves of many, with names uneraser, stand "To my Dear ———, from

———," and "For ———, with the sincere regards of ———," &c., &c. One would think, to save appearances simply, if nothing more, the original owner would first tear out carefully and neatly such a fly-leaf, or at least erase beyond decipherment its inscription before exposing such a book for sale.

The loving uncle or aunt or cousin, or he who is more than uncle, aunt or cousin, does not imagine, undoubtedly, when making the gift, this final upshot to or irony of the cordial affection so embalmed. I have sometimes wondered what a shade of expression would be likely to strike a lover's face on coming in contact with one of these books—his own presentation—and seeing that the warm emotions of a former date had dilated to so little purpose. I have given a good many books away and loaned many that never returned, but I have been spared so far the personal experience of seeing them again as somebody's stock in trade.

Of course there is a mass of rubbish that drifts to the smaller book-stalls; but a single nugget, sometimes, will pay for exploring a good deal of dirt. It is a study to look at the faces that are habitual to these haunts, and, while they are reading the titles, read the various forms of expression that animate them. Where you meet the real "old stagers," and not the mere casuals, to whom the scene itself has not as yet lost its first novelty, the study is not unworthy of a Darwin. It should belong to a special branch of physiognomy, where each separate emotion would be found to leave some infallible signification. The feeling which imprints itself on the face when its possessor has found the third and fourth volumes of a broken set of four, of which he owns only the first and second, should be suddenly marked and plainly seen. It is not an uncommon occurrence—for two friends of mine have felt the glow of satisfaction which it brings within a very few days, dating from the time I write.

The fact that valuable sets of books, in good order, are so frequently broken suggests the query of how it happens. It is certain that no person in his right mind would divide a set of volumes for the sake of selling a part of them, and thus foolishly damage both fragments. A volume or two may be stolen from a shelf by a pilfering servant, or hang on in a library, with so little discretion that no notice is taken of the fact that what is stolen is not complete, and afterwards be sold on the best terms possible. Whatever may be the cause, broken sets do abound, and may be seen in every place where old books are sold. I come upon them so frequently that it seems to me (and I hereby patent the idea) that it would pay some thrifty book man to establish, in connection with his sales, a feature which might be called a "Literary Clearing House," in which entry books should be kept for the registry and description of all imperfect sets of literary wares in New York, Brooklyn and other large cities. To this point those who wish to match their incomplete sets would go; and whoever should avail himself of the privileges of the "Clearing House" would, of course, pay a suitable fee.

In this way, perhaps, hundreds of lost relatives—sundered ties as pathetically rived as any since the havoc made by the slave block—might be happily brought together. If some owner identified occasionally his lost property by this means justice might eventually be done; and dealers would be cautious in buying and thieves in appropriating and selling that which belongs to other parties. If any dealer sees fit to act upon this suggestion, I trust that he will respect the copyright I enter, which he may satisfy by

making liberal discounts on or awards of his own books.

You can easily see, when you look over rows of second-hand books, that very good works which ought to have, and do have, a fair sale, are to be found often as good and fresh as if new—and they are often new—at half price or less. This fact shows, in one way, that a good many people who read a good many books are not able to own all the books that they buy, and so they sell some of them, after a quick perusal, at a large discount, and turn the avails toward other purchases.

If I speak of a book as being second-hand I do not mean to intimate thereby that it is necessarily second-rate. Books acquire a value sometimes from their previous ownership, from some particular history connected with them, or from corrections and notes made on the fly-leaves and margins, or from the unostentatious autograph of a distinguished owner. Books sold from Charles Dickens' or from Bayard Taylor's library were increased in value by their previous ownership; and a book containing an autograph as this, for instance, which is not of a kind so very uncommon, "To Charles Lamb, with respects of T. De Quincey," would have a double enchantment to a putative purchaser. Books published by certain publishers have a certain aroma to the collector, apart from all other considerations. A Pickering or Chiswick, or both combined, is quickly noted by the chronic collector, who possesses the proper ardor, though many of these would be thought dull looking by one who is a casual or uninitiated; and very likely the latter personage would skip over a dozen of them to buy a gaudy, glowing volume out of some cheap brand of Dolly Vardenish gilt and spangles, whose loud self-consciousness and conceit of manner would debar its entrance into any well chosen library.

There is a good deal, too, in the binding of a book and in the binder who puts it on, that makes or qualifies the value of it. We laugh at a non-expert among pictures who pays too much attention to the frames; but the analogy does not hold with respect to books. The garment does not make the man, but it frequently does go a good ways toward making the character and high quality of a book. Tree-calf or full Russia are among the royalet of bindings, and signify a sort of princely blood; half Russia and morocco may stand for patrician and brains, while plain cloth can be said to represent the plebeian or democratic costume; and happy is he who can command even half what he wants in this latter garb. When the edition of a work is limited and out of print, and a new demand springs up, not quite sufficient to warrant reprinting, and yet which is urgent so far as it prevails, the price of a copy of it goes up often far beyond the quadrupling of the original price, and, in rare cases, to a price that is fabulous and beyond the reach of all ordinary purchasers. Other things being equal, the age of a book, after it passes a certain point, adds to its value. A copy of the Mazarin Bible, which is not only rare but very old, and which is soon to be sold in the Brinley Library sale, will undoubtedly bring a good many thousand dollars—enough, probably to purchase a country house and farm. A book like this, however does not get into the book stores, but is usually sold at auction when the estate to which it belongs is to be settled up.

A stranger who first begins to frequent book stores, notices very soon that the manner and traditions of trade there are quite different from those which prevail in the dry goods, hardware, or any other style of mercantile business. The dealer and his assistants pay no attention of the

ordinary kind to the customer if he seems to know what he is about, and the customer goes all over the store, or along the shelves of a hall, handling and looking at every book he chooses. If he stays a half day, and then starts to go out, there is no occasion to speak to him, and he may come the day after, and the day after that, repeating the same process. But if he pauses in his search, or if he seems to be in anyway in a daze or in doubt, he will be asked what book he desires, and have it pointed out to him. This difference to the average book-buyer always strikes me—if I may be allowed to put it so—as a kind of tacit compliment to his intelligence, and a token conferring in a certain way the imprint of superiority.

When I was in the city lately for a few weeks' stay, I had two friends, M—— and W——, whom I wished to see often, but I made no appointments for that purpose. It was never necessary to do so. When I happened to make a general circuit of the retail bookstores I was sure somewhere to find the former; and if I stepped into the book auctions some afternoon, I invariably found the latter deeply absorbed in his catalogue. I do not intend to intimate that the financial resources of either of these friends are any less than their high mental equipment; but I am certain, if they should some day possess the equivalent of Mark Twain's favorite volume—"Vanderbilt's pocketbook,"—there would soon be no choice books left for me to buy, and my occasional recreation in hunting such treasures up would be summarily and irrevocably extinguished.—*Christian Union.*

The New Orleans States says: We take pleasure in calling attention to the business card of our friend, Paul Sauve, for several reasons. First, we like neat work and good stationery, and we always find both at Sauve's. Then, we like the energetic and industrious young merchant much more, when we find him conscientious and square in all his dealings, and Mr. Sauve is all this. Beginning young and almost unaided, the princely estates of his father having been entirely destroyed and desolated by the late war, the steady perseverance with which he has met all opposition, and the gentlemanly bearing with which he inspires and retains the confidence and good will of the public justly entitle him to success.

The Springfield, Mass., Union, says: Springfield loses one of her prominent and well known citizens in the removal to New York of ex-Alderman J. F. Tapley, who has purchased the bookbinding on Great Jones street, belonging to the estate of the late Joseph Glascle. Mr. Tapley has become so thoroughly identified with the municipal and business interests of the city by his long residence here, that his removal will be much regretted by his many friends. Mr. Tapley began the bookbinding business in this city thirty years ago, and from 1853 to 1872 was a member of the firm of Samuel Bowles & Co., and had charge of the bindery part of that firm's business. In 1872 he became a member of the Clark W. Bryan Company, taking charge of its large bindery, and he remained with that company and the Springfield Printing Company until a few months ago, a part of the time serving as treasurer of the company. Mr. Tapley has been a faithful and conscientious city officer, serving repeatedly as a member of the board of aldermen and acting as chairman of some of the most important committees of the city council. All who have known Mr. Tapley personally, or who have had business relations with him, will wish him the most abundant success in his new business undertaking.

CEMENTINE.

WE desire to call attention to a new article which we are just now introducing to the trade. It is a liquid glue, cement and mucilage combined. In our own business we experienced so much difficulty in finding an adhesive that would make our labels adhere to the tin cover of the Hektograph, that we gave a commission to one of our most distinguished chemists to compound for us an article which would answer our purpose. After months of labor the result has been the production of an adhesive so far superior to anything heretofore made, that we have decided to manufacture and offer it for sale, and are now ready to supply it in any quantity. It is without doubt the best article of the kind for family and general use ever offered to the public. For repairing China, Glassware, Furniture, Rubber, Leather, Books, Billiard Cues, or pasting labels upon tin or other metal or for any use where glue, cement or mucilage is required, it is unrivaled. For warm climates we make an article expressly adapted for use there. We supply it by the gallon or barrel, and for family use it is put up in bottles, with brush, at 25 cents. Samples will be sent free to large consumers.

BYRON WESTON

DALTON, MASS., U. S. A.,

HAS BEEN AWARDED THE

GRAND PRIZE GOLD MEDAL

AND RECOMMENDED THE

Medal of Honor and Perfection

At PARIS, 1878,

This being the **HIGHEST** and **ONLY** AWARD given for

LINEN RECORD & LEDGER PAPER.

—A SPECIALTY.—

THIS Paper has received THE HIGHEST PREMIUM over all others from the Cincinnati Industrial Exhibition, Massachusetts Charitable Mechanics' Association, Franklin Institute of Philadelphia, Louisville Exposition, Medal and diploma from United States Centennial Commission, Medal of Progress American Institute, 1877, and Medal of Improvement and Progress, Boston, 1878. Its

PRINCIPAL ADVANTAGES

are as follows:—1. It contains more LINEN than any other Ledger Paper, has a longer fibre, and is, consequently, tougher. 2. Having a harder and better body, it frays less in erasure, so that by simply using the rubber after the eraser, the ink is prevented from spreading. 3. It is more uniform in Weight Color and Finish. 4. It never cockles if properly bound. 5. Its chemical action upon ink is such that it both writes and rules up better. For proof of the foregoing, refer to a large number of Stationers, Bookbinders, Bookkeepers, and Recorders, who have given it, after a severe test, the preference over all others. This paper is *Double Sized*, and will stand any climate or the most acid of fluid inks.

Send for sample sheet, ERASE and REWRITE FOUR TIMES on same spot.
Each sheet is water-marked with name and date.

Correspondence.

BOSTON NOTES.

[FROM OUR REGULAR CORRESPONDENT.]

BOSTON, Mass., August 15, 1881.

At home again! Back into the sweltering city; back into the midst of the maze and din and rush and crush and tear of business. After all, give me the city to live in; but (aside) a nice suburban town in which to sleep.

A brief call upon the leading stationers found them busy, quite busy for this season of the year, but the fall trade has commenced to set in. Orders are growing plentier and larger every day, and the demand for a larger variety of goods is noticeable. This means business. With the waning of the harvest moon the fall business always begins to set in.

Dealers express themselves as quite satisfied with the position of the manufacturing market; that is to say, the price of raw materials, the price of rags and the temper of the mill people, so far as papers, envelopes, &c., are concerned, are all such as to give a confident tone to the trade, and assure all concerned that prices will not vary much during the next two months at least. Stocks, in the meantime, are ample, but constant additions are being made.

H. O. Houghton, the senior member and builder-up of the famous "Riverside Press," at Cambridge, was the recipient of a reception given to him by his employees on Wednesday last. The affair took place on the lawn facing the building. Mr. Houghton's response to the brilliant speech of welcome was feelingly made; and, among other things, he said that he was glad to get home, and felt more contented, after what he had seen abroad, with his own place of business. The best of feeling prevails between the head of the Riverside Press establishment and the many employees.

In cards, dinner cards come in the shape of lilies, pansies, sunflowers, clover leaves, &c., fringed at the edges. Lunch cards are very similar, but come in series smaller than the dinner cards.

People are beginning to return home, and well bronzed they are. As to business, the indications are that about everybody will be pretty busy during the coming season, now close at hand.

The Manufacturers and Mechanics' Institute will open on Thursday next. Governor Long will do the opening. He has also tendered the distinguished dignitaries who may be present (and there will be a crowd of them) a complimentary dinner at Nantasket. The Institute's building covers five acres and its managers have control of five

more acres adjoining which they will utilize for fair purposes, sooner or later. This fair is designed for a year round show. The stationers will have splendid specimens of their work on exhibition; and I hear that New York stationers, especially manufacturers of blank books, will also have specimens of their handiwork on exhibition.

The fair of the Massachusetts Charitable Mechanics' Association will open two weeks later, on September 1. The two fairs are rivals in on sense. Yet they are, for the former is an outgrowth of the latter, which has proved too cramped up and exclusive for the liberal ideas of the manufacturers of New England. Both fairs are located on the Back Bay.

There have been a large number of New York gentlemen in town during the week, selling goods by samples. By the way, speaking of "commercial travellers," the merchants of Boston have formed an organization for the purpose of testing the constitutionality of the obnoxious laws, in the Southern States, which prevent gentlemen representing houses in New York, Boston and other cities, from selling their goods in that part of the country. I say preventing, because the laws upon the subject, in some of the States, are almost prohibitory in their character. Southern friends, take down your signs, and let us all have free trade in the States.

I have had no time since my return to pay special attention to several houses that deserve special notice, but will do so in my next letter.

I hear incidentally that the Christmas holiday trade, especially in cards, promises to be unprecedentedly large. This statement is based upon the number and size of orders already received thus early in the season. I think the same remark is applicable in a general way to the stationers' trade as a whole. The continued increase in business calls for more stationers' goods than was the case last year.

L.

CINCINNATI NOTES.

[FROM OUR REGULAR CORRESPONDENT.]

CINCINNATI, O., August 15, 1881.

A cry comes from Egypt, a cry of total failure of corn and tobacco. Reports, quite trustworthy, picture a sad prospect for farmers in Illinois from Cairo to Pana, corn burned out by hot dry weather beyond the reach of benefit by rain that may come. While in the nature of things we must all suffer with those that suffer, we may take consolation from the reflection that our lot is cast in a land in which, owing to the variety of its soil and climate, a universal famine or universal short crops are next to an impossibility. While the news comes from southern Illinois that rain cannot help the withered corn,

we receive by the same lightning flash the cheering tidings of bounteous showers in Kansas, Missouri and Kentucky, and that crops are vastly benefited, perhaps brought up to the standard yield. The great tobacco growing region of the Ohio Valley is in ten counties in Ohio and Kentucky, within one hundred and fifty miles of Cincinnati. The heat and drought have been pinching the tobacco crop in this region. Experts, however, have concluded that continued drought would only curtail the yield, and have taken heart from the fact that the greater acreage planted this season would bring up the product to about the usual average, and Saturday and yesterday came the gentle, welcomed, prayed for, blessed rain.

Well really, for the past two weeks business men in Cincinnati might be seen watching a cloud no bigger than a man's hand—watching it wistfully as if it were an aerial chariot bringing deliverance in its train, for the same sun that was parching the fields had begun to shrivel their hopes. They never lost heart though. These Cincinnati merchants and manufacturers never do. I have not met a man of them who, when the sun scorched fiercest, showed any symptoms of wilting spirits. The field of the stationer, the manufacturer especially, in Cincinnati, rather than in Ohio, which to a Cincinnati is synonymous with Cincinnati—to such business men the field of trade is long and broad. If the editor of the STATIONER could have his way it would cross oceans and girdle the globe. It will, too, and when it does Ohio as usual will be heard from.

By Howard Lockwood's showing, in his paper read at Saratoga, Ohio now holds the third place in the aggregate avoirdupois of annual product in building, roofing and sheathing papers, in straw board in straw pulp sold to paper makers; in all grades of wrapping except straw wrapping—in all these Ohio stands, in 1881, first in the United States. There is a tendency to enlarge among the mills in this vicinity. Everybody has observed how quickly a mill is rebuilt here when destroyed by fire.

And now comes the dread again of losing the President. Business is timorous during a Presidential campaign; and, aside from the admiration felt for the personal qualities of President Garfield, the tone of business has been visibly sinking and rising with the rising and falling of the pulse throbs on that sick bed at the White House, and how beautifully it has exhibited the great heart of the American people. Of course every one knows that, apart from the sorrow for his suffering and the deep pain from the loss of such a man, the effect on business dreaded is the check such an event would give. It would only be a

temporary check. I have not heard a business man speak of that view of the case as worthy a moment's consideration in comparison with the unspeakably sad view of it as a noble career cut short by the crime of an odious scoundrel.

The Cincinnati Industrial Exposition is at hand. As a rule the stationers and printers have not been overwhelmingly represented in these exhibitions. Manufacturers of paper have been well represented in many of them, and a printing press has been in active operation every year. What I mean is that exhibits of papers, printing and stationery, have never been grouped in one contiguous display so as to give the *en masse* effect. On the contrary, these displays have usually been dispersed through the buildings. The fault has been rather more with the Guild than with the Exposition Commissioners. There are certain lines of stationery for which no specific prize is offered, but a class No. 68 is provided to cover such cases and enable exhibitors to secure awards for meritorious displays of articles not named in the list of articles for which premiums are offered. Any one desiring to enter the lists should apply soon. A letter of inquiry to the "Secretary of the Cincinnati Exposition" will secure documentary information quickly and fully.

There are not many traveling men in this field. Those who have been here have usually stopped on their return from the far West, and as a rule seem to be on the homeward route. The following named houses have been represented within the last fortnight: Carter & Dinsmore, by Mr. Dinsmore; Daniel Slote & Co., New York, by Mr. James; New York Blank-book Company, by Mr. Beach; B. Illfelder & Co.; New York, by Mr. Phillips.

Many of the manufacturers and large dealers here are off to the seashore or the mountains, taking vacation, and have not returned.

PRINCE WILLIAM.

CHICAGO NOTES.

[FROM OUR REGULAR CORRESPONDENT.]

WESTERN OFFICE LOCKWOOD PRESS, {
8 LAKESIDE BUILDING, CHICAGO, ILL., AUGUST 13, 1881. }
Jansen, McClurg & Co. have issued a circular to the effect that "Edward Cook has become a member of their firm, the co-partnership dating from July 1. Mr. Cook's connection with the book and stationery trade commenced in 1859, and has continued almost uninterruptedly since that time. During the last thirteen years he has been the general Western agent and representative of Ivison, Blakeman, Taylor & Co., the prominent school book publishers, and he only severs this connection in order to become a partner in this house. Jansen, McClurg & Co., say that they believe that his long experience in the various departments of the trade, and his wide acquaintance with dealers and educators, well fit him to aid them in carrying on and developing the large and rapidly increasing trade with which they are favored through the kindness of friends and the rapid growth of the West. With increased capital, added working power, and new facilities, this firm declares that it will endeavor to merit and satisfy the still larger trade which the growing culture of the Northwest and the prosperous condition of the country induce it confidently to expect." Personally I would add my congratulations to that of his friends, in saying that Mr. Cook is a gentleman whose enlarged relations with the trade can only serve to make him more widely and thoroughly respected and admired. The firm of Jansen, McClurg & Co., has won a fresh hold upon the sympathies of the trade.

A recent visitor to this city was A. S. Spence, dealer in novelties and fancy goods in San Francisco, Cal. He passed through the city on his way from a regular summer jaunt to the East. He reports trade good in every direction, and says that last year he paid the MacKinnon Pen Company \$13,000 (round figures) for goods sold by him.

S. S. Scott has just sold his third semi-annual bill of MacKinnon pens to the Wisconsin Legislature. This time it was ten dozens, all "Sovereigns." The St. Louis agent, S. W. Higgins, has just sent in an order for five dozens. "Trade is good" says Mr. Scott.

Now, prepare to hear from Adams & Kimball. They are on the war path!

John J. McGrath styles himself "The Great I Am" for wall papers in the West. Write and find out what he is.

"Use de shtylographic pen, my shield; it safes ink," says Mose Jewell in "The World." H. A. Taylor declares that the Livermore pen not only saves ink, but time, patience and repairs.

G. B. H.

FLORENTINE WOOD CARVINGS IN LONDON.

The library in the mansion now nearly completed for Leopold de Rothschild in Hamilton Place, Piccadilly, is fitted up in walnut and limewood, elaborately carved from ceiling to floor. The work was designed by the Chevalier Rinaldo Barbetti, of Florence and was executed at his establishment there in the short space of nine months. The room is of an irregular shape, and measures 24 feet 8 inches by 22 feet 4 inches, and has its principal access from the dining room. On entering the library from the latter we have on the right an important chimney-piece, in front a large window, and on the left two French windows, leading to a loggia that looks on to the garden. The style is that of the Renaissance. The moldings of the bookcases, doors, cornice and, soffit are all done in Italian walnut, whilst the decorative and ornamental carvings are in lime-wood, having a white creamish color, and presenting at present a contrast somewhat too strong.

The bookcases are seven in number, and have in the upper part twenty-six pilasters, the inner part of which is limewood, exquisitely carved with minute and fanciful designs, consisting of figures, animals, birds, leaves, flowers, architectural and ornamental subjects. The design of each pilaster is different from the others in its details, so that there is a wonderful variety in the motives and subjects represented, although the general outlines of each pilaster are, of course, in harmony with the rest. The caps of the pilasters have also different designs, and are varied in the details.

The lower part of the bookcases is inclosed with doors having panels in lime, with designs of figures, leaves, and ornaments, and in the lower part of the bookcase are pilasters in lime, carved, representing sprigs of trees and plants, with insects.

In the intervening space between the bookcases, windows, doors and chimney, instead of paperhangings or silk stuffs, the walls are covered with five large panels carved in limewood, which represent Europe, Asia, Africa, America, and Australia, personified by female figures, each bearing attributes, and surrounded by animals, fruit, &c., peculiar to each country.

Above the bookcases are friezes in limewood, with carved Cupids and ornamental designs. The large panels and all these friezes have the background gilt in dead gold.

The chimney piece stands 7 feet 6 inches high, projecting from the sides about 3 feet; in the inside there are two niches, one on each side, with a seat; each niche has a panel, carved, one with a figure representing "Tragedy," the other "Comedy." Above the canopy there are the arms of the Rothschilds carved in limewood, surmounted by the Bible; on the sides of the arms are, in full relief, two cupids sitting, carved in walnut, and in front of the canopy are two sleeping cupids, in walnut. Over the mantel are three *bas reliefs*, in walnut, the centre representing "Apollo and the Muses;" the sides have two female figures, one representing "Steam," and the other "Electricity;" on the left side of the chimney piece there is a door leading to the grand staircase, and which has, above a square frame, a panel having a carved *bas relief* representing "a group of cupids reading and studying." Over the principal door there is also a large square shield, in limewood, beautifully sculptured and ornamented, bearing the following inscription in raised gilt letters:

VETERUM
RECENTIUMQUE
SCRIPTURUM
VOLUMINA
HEIC ASSERVANTUR
VERENS
TANGERE LIMINA HOSPEIS.

Between the caps of the bookcases are small square shields in limewood, each with a Latin or Greek quotation from the classics.

The cornice has large panels, tinted in light blue color, and a raised stud in walnut in the centre; under the cornice runs a frieze, in which are fifty-three ovals, having each a recumbent figure carved in lime; these figures are all varied in design, and are intended to represent the sciences, arts, virtues, and so on.

Some thirty men were employed in the work, comprising carpenters, joiners and wood carvers, and the cost, we are told, will be about £4,000.—*Builder.*

At a recent auction sale in London a number of rare old coins provoked a lively competition and brought large prices. A gold rial was put up which bore the effigy of good Queen Bess. Her Majesty was represented as standing on the ship which typified the naval power of England after the defeat of the Spanish Armada. After a fierce competition it was sold for £10 5s. Then came a rare half crown of the same reign, and a crown piece which Essex might have paid to Raleigh, or Shakespeare have changed at the Boar's Head. The first was knocked down for 46s. and the second for 75s. A sovereign of Edward VI.'s time brought £6 5s., another of his sister Mary's £5 12s. 6d. and a rial of their father's day £6. An Oxford £1 piece of Charles I. sold for £7 2s. 6d. Two Newark siege pieces realized £1 11s., and two Pomfret siege pieces £3. Connoisseurs were greatly excited over a Cromwell "Broad." It went at last, however, for a £5 note; and a silver Cromwell Dutch crown was sold for two shillings less.

German telegraphic engineers have lately been making some promising experiments with aluminum as a material for telegraph wires. This metal can easily be drawn out to a much finer gauge than is possible with iron, and its conductivity is twice as great; but its great cost has prevented its use for this purpose. It is now found, however, that an alloy of aluminum and iron can be readily made which will produce a wire much superior to iron as a conducting medium, while it is both finer and stronger, and also less susceptible to atmospheric changes.

OLD BERKSHIRE MILLS

DALTON, MASS., U. S. A.

One party writes: "The two hundred RECORD BOOKS, for 83 of the 99 Counties, now on exhibition at the Iowa State Fair, at Des Moines; and all, but four (!) of them, made from your 'OLD BERKSHIRE MILLS LINEN LEDGER,' Medium, 40lb., make a splendid show."

MANUFACTURED BY
CARSON & BROWN CO.
DALTON, MASS.

[The above cut is a fac-simile of the wrapper used on the Linen Ledger Paper.]

We will pay for any book rejected on account of fault in the paper. Send for Samples, test them in comparison, and see that your books are made from paper thus water-marked.

SEASON 1881-1882.

L. PRANG & CO.'S

Christmas and New Year Cards

ANNOUNCEMENT.

WE hereby beg leave to announce to the trade the completion of our line of Christmas and New Year Cards for this season, for which our agents are now soliciting orders. The extent of our list, the originality, and especially the American character of our designs, together with the great care taken in their execution, will, we have no doubt, secure for our goods the popularity which they have enjoyed heretofore. The efforts we have made to secure the highest excellence, is attested by the names of some of the artists whose designs have been reproduced. We would only name Elihu Vedder, C. C. Coleman, Thomas Moran, Miss Rosina Emmett, Miss Dora Wheeler, Mrs. O. E. Whitney, W. H. Gibson, F. S. Church, R. G. Birch, &c. That a due regard has been paid for the quality of the literary matter, in connection with these designs, is shown by the fact that many of the designs are accompanied by original poems from writers of note, such as Mrs. Celia Thaxter and Mrs. Emily Shaw Forman.

The great increase of our manufacturing facilities, secured by additions to our building nearly doubling our floor space and by the adding of new machinery, will place us in a position to fill orders promptly. Still we would request dealers to place their orders as early as possible, so as to still further enable us to make timely preparation for prompt deliveries.

Our Cards will, as heretofore, be put up in envelopes containing twelve Cards, unless otherwise stated on our price lists.

We furnish envelopes without extra charge for all our Christmas and New Year Cards, for which the list price is \$1.80 per set, and over. Our silk-fringed Cards will no doubt be in great demand this season. We have made ample preparation to furnish these in time and have made arrangements with our manufacturers for the best quality of silk fringes. We would call special attention to the excellence of our fringed Cards and the novelties in colors and style of fringes we offer for this season.

A marked and attractive feature of our cards are the elegantly ornamented backs.

All our fringed Christmas and New Year Cards are furnished with envelopes and protectors, so as to insure safe transportation in the mails.

It will be impossible to embody our whole list in the space of the advertisement, and we will therefore merely give a general outline of the variety offered.

PRANG'S PRIZE CHRISTMAS CARDS. COMPETITION OF 1881.

These are the Cards selected by the judges in the second competition for four designs of Christmas Cards, for which we offered \$2,000 in prizes of \$1,000, \$500, \$300 and \$200 respectively. At the recommendation of the judges, Messrs. COLEMAN, LAFARGE, and WHITE, the prize for third best Card was increased to \$500. Mrs. CELIA THAXTER has written appropriate verses for each of the designs.

- 1st Prize Card (\$1,000)**, by Elihu Vedder. Size, $6\frac{1}{4} \times 9$ inches; price \$1 each. Same card with silk fringe, cord and tassels, price \$1.50 each.
2d Prize Card (\$500), by Miss Dora Wheeler. Size, 7×9 inches; price 75c. each. Same card with silk fringe, cord and tassels, price \$1.25 each.
3d Prize Card (\$300), by C. C. Coleman. Size, 7×9 inches; price 75c. each. Same card with silk fringe, cord and tassels, price \$1.25 each.
4th Prize Card (\$200), by Miss Rosina Emmett. Size, $5\frac{1}{4} \times 9\frac{1}{4}$ inches; price 60c. each. Same card with silk fringe, cord and tassels, price \$1 each.

The Prize Cards can also be had mounted on heavy board with gilt beveled edges.

We beg to call attention also to the following publications for New Year and Christmas:

- "**Goddess Fortune**" New Year Card, by Elihu Vedder. Size, $6\frac{1}{4} \times 8\frac{3}{4}$ inches; price 75c. each. Same card with silk fringe, cord and tassels, price \$1.25 each.
 "Christmas Dove." Size, $7 \times 9\frac{1}{4}$. This card is in the same style as the success of the last Easter season, the "Easter Dove" Price 60c. each. Same card with silk fringe, cord and tassels, price \$1 each.

Our Regular Line of Christmas Cards consists, among others, of the following Series:

- Nos. 901, 902, 903, 906, 909, 910.** Floral designs ranging in price from 20c. to \$1.20 per set of 12.
Nos. 904, 905. Humorous Cat and Frog Designs, 60c. per set.
No. 907 is a new series of Horseshoe designs, 75c. per set.

- Nos. 920 and 929.** Children's designs, at \$2.40 and \$3.60 per set.
No. 922. Shells of Ocean, with figures, \$2.40 per set.
No. 924. Fans with silk fringes, \$3 per set.
No. 933. Bric-à-Brac designs, very rich, \$6 per set, and many others.

We offer a similar assortment of New Year Cards, but would call special attention to No. 1320, a new folding calendar, at \$2.40 per set. Most of the Numbers can be had with silk fringes ranging in price from \$2.25 to \$12 per set. Stock will be ready for delivery September 15.

Besides the above, attention is called to our **New Birthday Cards, Scripture Texts Cards, New Panels, New Water Colors**, by Thomas Moran, and other publications. Our line of **Thanksgiving Day Cards** will also be shown by our agents.

Trade Novelties.

[We will be glad to receive samples of all novelties issued in the trade, and will notice all such which possess merit free of charge. It is desirable to accompany descriptions with cuts whenever possible.]

OLD MAID IMPROVED.

The game of "Old Maid Improved," just issued by Milton Bradley & Co., is a novelty and, like "Authors Improved," is said to be a great advance on any other style of this always salable game. The cards are in new designs, printed in colors, and each pair when placed together forms a complete picture. The designs are interesting and amusing in themselves and form a series of dissected pictures, pleasing to the children, when the older members of the family circle are not engaged in the game.

EXCURSION TO CONEY ISLAND.

Milton Bradley & Co. have just issued a new game with the above title, which, it is thought, will afford much amusement to any evening party. It is a reading game and recounts in innumerable forms the experiences of a jolly party visiting Coney Island during the season, and is equally interesting to those who have not visited the famous resort—if there are such this side of the Rockies—as to those familiar with it. The box is ornamented with a handsome label in india ink tints, and is altogether a very neat package for the trade to show.

ERASIVE RUBBERS.

Evans & Gardner's "Standard" Erasive Rubber is made with great care to insure the erasure of pencil marks easily and entirely without injuring the surface of the paper. The "Double Wedge" is a new style said to be particularly adapted to the use of architects and bookkeepers. It is of all the different sizes for such purposes, as well as for school uses. This shape has the advantage that, while it gives the user a firm grasp on the eraser, it enables him to present either a very thin and delicate, or a broad and full erasing surface to the paper, with the same (and either) end of the piece. The same firm has brought out the "Ink and Pencil Eraser," which has beveled ends—an entirely new feature. Another novelty in rubber is the firm's "Nigrivorine," which is specially prepared for artists' use, for blending and erasing crayon and pencil marks. This is made with pointed ends and of three sizes. All of these erasers are handsomely packed in neat nest boxes of one hundred pieces of a size, a new and desirable change from the old style pound packages. Each piece bears its distinctive number. The accompanying cut illustrates the "Double Wedge."

MAGIC POLE.

The cut illustrates what is called the "Magic Pole," a new contrivance for taking down high piles, or shelves, or putting up in high places any kind of a box having a projecting lid, made of card board or light wood, weighing from one to fifty pounds. It is self-adjusting and fits any box between certain sizes, and is made to fit any size. It handles equally as well boxes where the lids are tied or not tied. When not in use it can rest in a horizontal position on two nails or hooks driven part way into one of these shelves. Fol-

lowing are the directions for using it: Slip the blade between the lid and the box; straighten the pole, and the bottom of the box will rest on one of the steps, when you can take it down. The Magic Pole works well either 6, 8, 10, 12, 14,

or 16 feet long. If it is too long, saw a piece off the end. No. 1 handles all kinds of envelope boxes from No. 2 to No. 8½; No. 2 handles envelope boxes from No. 9 to No. 15; No. 3

handles shoe boxes, millinery boxes, hat boxes, and boxes of that size. This pole is made to fit any kind of box with a projecting lid. J. H. Williamson, St. Louis, Mo., is the patentee and

manufacturer, and the Williamson-Stewart Paper Company, 209 and 211 North Main street, St. Louis, has the agency.

Take a true view of life; be proud that you have work in the world's busy path, and do it well and honorably.

NEW PATENTS.

- No. 245,267. Toy.—Thomas A. Anderson, Cleveland, O.
No. 245,311. Toy.—Edward L. Morris, Boston, Mass.
No. 245,330. Paper Cutting Machine.—Joseph Walker, Manchester, Va.
No. 245,347. Combined Book-Holder and Portfolio.—Higinio Canudas, Mexico, Mexico.
A portfolio consisting of a rectangular receptacle, provided with hinged door and a cord secured to the back of the receptacle and passing around the door to a revolving handle having a pawl-and-ratchet mechanism, whereby the cord may be tightened or loosened.
No. 245,353. Type-Writer.—Charles H. Davids, Brooklyn, assignor to himself and David F. Davids and May Dow Davids, both of New Rochelle, N. Y.
No. 245,368. Combined Letter-Sheet and Envelope.—Wm. A. Gans, New York, N. Y.
No. 245,375. Sheet-Delivery Apparatus.—John T. Hawkins, Taunton, Mass.
No. 245,452. Combined Toy Whistle and Wind-Wheel.—Lyman P. Converse, Chicago, Ill., assignor of one-half to Cragin Brothers & Chandler, same place.
No. 245,486. Writing-Desk.—Magnus J. Hafgar, Chicago, Ill.
No. 245,493. Envelope Machine.—Edward Hely, Dublin, Ireland.

The machine is provided with four folding-boxes, above which is a spider, which carries eight plungers, each plunger being provided with a gummer, which is also a picker. This spider has an intermittent revolving motion, and is vertically reciprocated during the periods of rest in its rotation. Between the folding-boxes are arranged four piles of blanks. The plungers descend, four of them going into the folding-boxes and the other four resting upon the four piles of blanks. As they ascend, four blanks are picked up. The spider is then rotated one-eighth of a revolution, bringing the picked-up blanks over the folding-boxes, when the plungers again descend, folding these four blanks, and picking up four more, and so on.

- No. 245,533. Type-Distributing Machine.—Abbot A. Low, Brooklyn, N. Y.
No. 245,533. Sawed Puzzle.—Reuben McChesney, Philadelphia, Pa., assignor of two-thirds to Willis L. C. Abbott and Reginald M. Miner, both of same place.
A spherical, oval, or cylindrical puzzle, composed of pieces separated by lock cuts.
No. 245,562. Type-Distributing Machine.—Thomas Reeve, Brooklyn, assignor to the Alden Type Machine Company, New York, N. Y.
No. 245,565. Perforator for Printing Presses.—Theodore G. Ruth, Sterling, Ill., assignor of one-half to William F. Eastman, same place.

- No. 245,566. Printing Machine.—Theodore G. Ruth, Sterling, Ill., assignor of one-half to William F. Eastman, same place.
No. 245,575. Method of Making Satchel Bottom Bags.—Edgar B. Stocking, Washington, D. C.

DESIGNS.

- No. 12,401. Font of Printing Type.—James M. Conner, New York, N. Y. Term of patent 14 years.
No. 12,402. Amulet.—Le Roy W. Fairchild, New York, N. Y. Term of patent 7 years.
No. 12,403. Pencil Case.—Le Roy W. Fairchild, New York, N. Y. Term of patent 7 years.

TRADE-MARKS.

- No. 8,553. Certain Articles of Stationery.—Eberhard Faber, Port Richmond, N. Y.
"The shield with the figure of a man and two stars upon it, the scroll, and the figure of the man in sitting position, with the two lilies, and the letters 'E. F.' 'N. Y.'"

No. 145—8 x 10 in., Congress Letter.

LINEN PAPER IN STAMPED
COVERS.

The above cuts show our new method of putting up *Fine White Writing and Linen Papers*, for general use, in *Portfolio Style*, with a sheet of the best Blotting Paper attached to the cover as represented, making it the BEST and MOST CONVENIENT form for writing tablet in the market, which will only need to be seen to be appreciated.

TOURISTS' TABLETS.

This is a line of *Fine White Writing Paper*, handsomely bound in Tablets, with flexible covers to keep the paper compact and prevent it from being soiled. They will be found very convenient for the use of travelers and others where a less expensive tablet than our "Portfolio" is desired. The covers are printed with a neat design, making them a very attractive as well as convenient article for general use. They are put up in packages with ten tablets of eighty sheets each, of the following Nos. and Sizes:

No. 121.—Commercial Note. No. 122.—Packet Note. No. 123.—Congress Letter.

WORKS:

WAREHOUSE:

Camden, N. J.

26 John St., New York.

The J. W. Stoakes Automatic Shading PEN.

FOR PLAIN, FANCY AND ORNAMENTAL
LETTERING.

WASHINGTON, D. C., March, 1880.
I desire to say that the "Shading Pen" invented by Mr. STOKES meets a want long felt by penmen. The work done by it is perfect in line and shade. The rapidity with which lettering is done, aside from the beauty of the work, is enough to recommend it for general use.

H. A. WHITNEY, Ass't Cashier, U. S. Treasury.
U. S. ENGINEER'S OFFICE, ST. LOUIS, Mo., }
February 11, 1880.

I have tried the PEN, and it gives great satisfaction. It is worth twice the price asked. It is valuable for headings, etc.

CHICAGO, April 21, 1880.
Indispensable for the execution of neat, attractive lettering, etc.

Circular and Sample Writing sent on application.

J. D. WHITMORE & CO., Agents,
41, 43 & 45 Beekman and 166 William Sts.,
NEW YORK.

A FIRST-CLASS Book and Stationery Business FOR SALE.

THE largest Book and Stationery business in a City in Pennsylvania that has a population of forty-five thousand inhabitants, is situated in the midst of a rich mineral and agricultural district, is a large manufacturing city, also a great railroad centre (there being seven different railroads running into the city and another road being surveyed), but four hours' ride from New York and two hours from Philadelphia, is offered for sale at a bargain on account of ill health.

It is centrally located in the best business square in the city, and has been established for more than thirty years—the stock of goods is fresh and clean,—and doing a large wholesale and retail business. The business for the year 1880 amounted to \$20,000.

This is a splendid opening for any person wishing to engage in the above-named business, and will bear a thorough investigation.

For particulars address W. A. R., care of American Stationer, 74 Duane St., New York City, N. Y.

POTSDAMER & CO., Lithographic Art Publications

Trade Gossip.

All new goods and designs which are not, strictly speaking, "Novelties" will be noticed under this head. The trade are requested to forward descriptions with samples in order to secure proper notice.

H. Boyd, stationer, Cleveland, Ohio, has been burned out.

Thomas Mulligan, newsdealer, De Soto, Miss., has sold out.

Clark & Hellen, printers, Webster City, Iowa, have sold out to Pray & Chase.

Edwin A. Clark, of Cossack & Clark, lithographers, Buffalo, N. Y., is dead.

The North Wayne Paper Company, North Wayne, Me., has been burned out.

A. Welsh, bookseller and stationer, Ada, Ohio, has sold out to A. W. West & Co.

J. B. Watson, publisher of the *Republican*, Truckee, Cal., has been burned out.

J. Hood & Co., book agents, Montreal, P. Q., Canada, are offering to compromise.

J. E. Ditson, of Oliver Ditson & Co., music publishers, Boston and Philadelphia, is dead.

Chas. E. Darrow, of Rochester, N. Y., and R. M. Mansford, of Memphis, Tenn., are in town.

Clum & Reppy, publishers of the *Epitaph*, Tombstone, Arizona, have dissolved partnership.

Glenn Brothers, publishers of the *Esmeralda Herald*, Aurora, Nev., have dissolved partnership.

McDonald & Brezee, publishers, Detroit, Mich., have dissolved partnership. Lloyd Brezee succeeds.

A. E. & G. W. Hassler, publishers, Pawnee City, Neb., have been burned out. Loss, \$1,500, not insured.

M. B. Robbin, stationer, Shelbyville, Ind., has admitted William Powell to partnership. Style, Robbins & Powell.

Max Griebel, of L. Prang & Co., has arrived safely home from his European trip, and his health is much benefited by it.

E. S. German's Sons, booksellers and stationers, Harrisburg, Pa., have dissolved partnership. Philip German continues under the style of E. S. German's Son.

E. & H. T. Anthony & Co. have just published a new catalogue and price list. It contains eighty pages and is full of illustrations. It will be furnished to the trade on application.

J. H. Bedford's Sons have this week introduced three new series of gilt French cards which are very neat and attractive. They have also introduced eight new series of advertising cards. Each series contains six designs, in three different tints.

Aikin, Lambert & Co. have received the highest prize awarded for gold pens at the Melbourne Exhibition. As the house also secured the highest award at the Sydney Exhibition last year, it seems that the Australasians are greatly impressed with its manufactures, and justly recognize the worth of these excellent goods.

The game of "Patience," published by Milton Bradley & Co., Springfield, Mass., is said to be receiving much attention at the watering places this season, as it is a fascinating solitaire and a still more interesting social game adapted to two or a half dozen players. The advertising it will receive this summer will give it a good start for a large sale the coming fall and winter.

Among the visiting members of the trade in the city during the past week were Mr. Shuttles, of Shuttles & Co., Atlanta, Ga.; J. K. Levy, of J. K. Levy & Son, and Julius Meyer, of New Orleans; W. W. Reilly, of W. W. Reilly & Co., Portsmouth, O.; W. H. Dempsey, Washington, D. C.; A. A. Adair, of Adair & Brown, Peoria, Ill.; J. D. Thomas, Paris, Texas; Mrs. Bolling, of R. R. Bolling & Co., Louisville, Ky.; Mr. Gillespie, of Gillespie Brothers, Schuylerville, N. Y.; Mr. Skeen, of Skeen & Stuart, Chicago; A. J. Santee, Clinton, Iowa; F. A. Morse, West Rutland, Vt.; Mr. Loring and Mr. Harmon, of Loring, Short & Harmon, Portland, Me.; Mr. Alger, of the State Journal Company, Lincoln, Neb.; Mr. Hurd, Bradford, Pa.; John McFarland, Detroit, Mich.; Mr. Koenig, of Koenig & Brother, New Orleans, La.; Mr. Catlin, of Catlin & Co., Jacksonville, Ill.; J. C. Hackney, of Jansen, McClurg & Co., Chicago.

The Acme Stationery and Paper Company is doing a very active trade in portfolio tablets. In fact the company is somewhat hindered, owing to its inability to obtain supplies of paper. This increased demand is somewhat due to the fact that the tablets are now being put up in leatherette instead of in cloth, giving them all the appearance of leather. Mr. Sears, with this concern, has just returned from a very successful trip to Canada and the East, and has started out to go through Pennsylvania. Mr. Otis, also with this house, will return from his Western trip of over two months next week, and after a short vacation will make a tour through the South. He reports trade throughout the West as very promising, with every indication that the fall trade in that section will be unusually heavy.

McLoughlin Brothers have in press and will shortly issue an entire new line of toy books which will be called "Uncle Sam's Big Picture Books." They comprise twelve different kinds. The covers will be in gold and colors, and the books themselves, it is said, will be far superior to anything of the kind ever offered. The list, with full particulars, will appear in the advertising columns of the next issue of THE STATIONER.

The Holyoke Envelope Company has just added to its extensive line of goods a new thing in a cheap business envelope—its demand being what its quality and price entitle it to. It is said to be the best cheap business envelope in the market. Orders since its introduction have been in excess of the company's ability to supply.

There is no holiday this year at Aikin, Lambert & Co's. The demand for their fine goods continues without regard to season, and all hands are kept very busy. Foley looks as if he enjoyed it.

E. Parke Coby, of E. P. Coby & Co., commercial stationers, on William street, arrived home from his trip to Europe, by the Arizona, on Monday.

James D. Whitmore is taking a short vacation with his family at Blue Mountain Lake in the Adirondack region.

John Petrie, of Victor E. Mauger & Petrie, and family, left on Monday morning to visit Niagara Falls.

Mr. Reed, of John Wanamaker of Philadelphia, was in town this week, having just returned home from Europe.

D. S. Wakenight, newsdealer, Parker City, Pa., has sold out to G. A. Needle.

Gillespie & Co., printers, Richmond, Va., have dissolved partnership.

Victor E. Mauger & Petrie have just received a supply of Goodall's Camden whist markers, both ivory and ebony.

Davis & Greenway, booksellers and stationers, Syracuse, N. Y., have dissolved partnership. Woolset & Greenway continue.

John H. Black, representing McLoughlin Brothers, has returned from an extended Western trip, and reports having done an immense business during his canvass.

Things to be remembered: That the Esterbrook steel pens are of standard quality, are adapted to the needs of all writers, are reasonable in price, and are to be had of all stationers.

Attention is called to the advertisement in another column of Frederic E. Scherer, whose knowledge and experience are said to fit him either for traveling or indoor salesman in the book and stationery line. He is an experienced catalogueur, and speaks several languages.

W. Bartlett Langbridge, manufacturers' agent, Sticbury's Buildings, Auckland, New Zealand, makes a specialty of the introduction of novelties in fancy goods and stationers' sundries into the New Zealand market. Mr. Langbridge is well vouched for. He asks for catalogues, price lists, and samples when practicable.

Langfeld, Turner & Andrews, Philadelphia, have a very attractive and tasty line of pocket books, purses, and ladies' satchels, of plush ombre and striped. These articles are exceedingly fine and absolutely new, as this firm is the first to manufacture them. The demand is very large, and it would be advisable for the trade to send their orders early if they wish to avoid delay.

Oliver Braden, traveler for Thos. S. Dando & Co., Philadelphia, wishes to thank the trade generally for the kind treatment he received during his recent trip West. The large day book he carried was not for expenses, as many supposed, but for orders, and he is happy to report that he barely escaped being obliged to purchase a second book, and would, no doubt, have done so only for having been taken sick in Kansas City and compelled to return home. Mr. Braden offers an apology to his many friends west of Kansas City for not calling on them.

Koch, Sons & Co., are very busy at present and are executing large orders. Their line of autograph and scrap books is very large, and they claim, for variety, style and prices, that it cannot be surpassed. The Johann Faber lead pencils are growing in favor and their quality is constantly being improved, especially the colored crayons, which have been indorsed as the best ever produced. They have just received from abroad some very elegant novelties in photograph albums, for which they ask the careful inspection of buyers.

E. & H. T. Anthony & Co. have placed on the market a Christmas gift in the shape of a toy which, it is said, will most probably be a popular article about the Christmas season. It is a miniature old-fashioned fire-place with the crane on which is hung a pot. The latter article can be used as a match box, ash holder, &c. As the whole article, with the exception of the crane, is richly gilt, it would make a neat ornament. It is said that the design is from the following words by Longfellow:

As in the chimney burning bright
We hung the iron crane to-night.

E. & H. T. Anthony & Co. have added another new line to the large and varied stock the firm handles. The latest introduction is a highly finished edition of hand-painted Christmas and New Year's cards which will no doubt meet with much approval as soon as seen by the trade.

Some beautiful novelties in this line will be specially referred to in future issues of THE STATIONER.

The Tytus Paper Mill Company, Middletown, Ohio, has been partly burned out.

McCoy & Marberry, dealers in notions, West-on, Oregon, have dissolved partnership.

A. F. Gibson, bookseller and stationer, Upper Sandusky, Ohio, has sold out to W. H. Wagner.

Fralick, Hitchcock & Weed, printers and publishers, Syracuse, N. Y., have dissolved partnership. Hitchcock & Weed continue.

Hamilton & McCracken, fancy goods dealers, Buffalo, N. Y., have had their special capital increased to \$6,000 and extended to April 1, 1886.

The annual convention of the American photographers was held this week at the American Institute in this city. It was the first ever held in New York.

Parties not intending to visit the city this year will find it to their advantage to see the samples carried by McCarty & Hasberg's representatives before placing their orders.

Evans & Gardner have now ready their fall price list of rubber and metal stationery specialties. It is neatly gotten up, well illustrated, and will be furnished to the trade on application.

The American Crayon and Slate Company reports an immense business in school slates, genuine chalk crayons, Triumph blackboards, soap-stone slate pencils, and O. W. school bags. THE STATIONER reporter found the concern so busy as to be scarcely able to communicate anything to him.

Charles J. Cohen, Philadelphia, reports large sales of slates, slate-pencils, school inks, and a variety of articles suitable for the approaching school trade. Mr. Cohen has two representatives on the road, who are sending in orders which are dispatched with excellent promptness. The improvements in Mr. Cohen's warehouses, commented on in a former issue, are now becoming available, and the regularity and system prevailing throughout are much to be admired.

Milton Bradley & Co., Springfield, Mass., are running their large factory to its full capacity on their novelties for 1881, of which they announce a greater number than in any single season before. Many of their novelties are the subjects of recent patents, and the elegant designs in chromo-lithography, for which this firm is noted, are said to excel all former efforts. The firm's early orders thus far are said to be largely in excess of any former season.

Milton Bradley & Co., Springfield, Mass., have in press their seventeenth annual catalogue of games, toys, and novelties. It will comprise fifty-six finely illustrated pages, with a cover in sepia tints of elegant design and will be mailed about the fifteenth of this month. Any of the trade who do not receive it by the 20th, will receive a copy promptly by sending their address to the publishers. The edition of last season was so attractive, that many in the trade carried them home for the children.

J. H. Hamburger controls the sole agency for the natural Scotch fern and flower cards and any one wanting these goods will, the firm claims, have to apply to it for them. This line is a success as also are the natural bird cards mounted on gilt edged bevel panels. The firm shows a line of combination cards which are very striking and attractive; among them may be mentioned those named as follows: the null, perfume rose, aquarium and Christmas tree. A superior line of fringed cards is also shown and French advertising cards in new designs are also offered in great variety.

less trade discounts. Correspondence solicited.

NEW YORK OFFICE AND SALESROOM, 18 MURRAY STREET.

THE BAY STATE PAPER COMPANY,

HOLYOKE, MASS., were among the pioneers in the W. C. Paper trade, and their goods, from the start, were

distinguished for their fine quality and the superior style in which they were wrapped. Their example has been approved and imitated by a swarm of competitors, who have flooded the market with inferior goods, put up in packages of 600 to 800 sheets, misleading the unwary, and sold at apparently lower figures; but the trade and consumers generally recognize the fact that a good article, honestly put up, in 1,000 sheet packages, is the most profitable both for use and for sale. Their goods are all guaranteed 1,000 sheets to package, and no short count. No wood is used in any of these papers, but they are made of the very best stock in the market.

THE "MEDICATED BOUDOIR" BRAND

Has no equal for weight, strength, softness, and color, and commands the front place with "fine retail trade." Present reduced quotations furnished on application.

The attention of the trade is directed to our Fine Manilla Writing and Copying Papers. A comparison in price and quality with other goods will convince any purchaser that it will pay to buy of us. Samples and prices on application.

THE STATIONER.

DEVOTED TO THE INTERESTS OF THE

Stationery and Fancy Goods Trades.

WEEKLY--\$2.00 PER ANNUM.

Single Copies - - - - 10 Cents.

NEW YORK, THURSDAY, AUGUST 18, 1881.

Advertisements cannot be received for insertion in the current week later than 12 M. on Wednesday. The charge for advertising is 25 cents a line, each insertion. Special terms for standing and displayed advertisements to be had on application.

This journal aims to be a medium of information for and a representative of the interests of every one connected with the stationery and fancy goods trades. It contains a full and trustworthy survey of the market for stationery in this country, in all cases giving the actual prices at which goods can be bought of importers and jobbers in this city, together with a detailed account of novelties in the trade, patents relating to stationery, and current items of interest. A review of foreign markets and accounts of movements abroad will also be furnished, and no pains will be spared to make THE STATIONER a thorough and complete exponent of the trade.

Subscription and postage for Great Britain, per annum..... 12s.
Any information our readers may wish to obtain shall be cheerfully given, and prompt replies will be made to all inquiries addressed to us on any subjects of interest to the trade.

Communications on all trade matters are earnestly solicited. Address

HOWARD LOCKWOOD, Pres. and Treas.

Subscribers to THE STATIONER can be supplied with the best cloth binder in the market. Deliverable at the publication office. Price, fifty cents.

Readers of this paper who avail themselves of the information obtained from its columns, by advertisement or otherwise, are requested to notify their correspondents of the source of their information.

TRADE seems to have blossomed.

No difficulty about getting orders. The trouble is to fill them.

SURPRISING as it may seem, some of the city houses have been "cleaned out" and have to fill up anew.

FOR at least two weeks we have observed that some of our neighbors have been working after hours—an indication of something pressing in business.

BURNING the midnight gas may be prejudicial to health, but it does not seem to be disadvantageous to trade. As we write the city has settled down to quietude and repose, but there are some people who cannot sleep, simply because other people will buy goods. Too bad, isn't it?

BOSTON, as we are told by our correspondent of that ilk, proposes to have the travelers' license question settled. New York, we suppose, will sit placidly by and look out for the pickings after Boston has fought the battle. It doesn't seem to us that this would be fair. All who hope to profit by a favorable decision in the courts ought to help. If the Boston people are in earnest they ought to call on their relatives and friends in other cities to give such aid as they can well afford, to prosecute the legal issues which are to be tested. There are boards of trade, chambers of commerce and the like in every city of importance. These should be invited to join hands and give their influence and strength to the movement for securing a decision as to the right of a man to sell his wares without a passport and a *visé* in every city wherever he may choose to go.

EXPORTING may be an old subject of discussion in these columns, but it always has something new—some phase which attracts attention and stimulates action. The August number of the *American Mail and Export Journal* is full of interest for people who have been thinking about working up trade in foreign markets. Beside its usual series of illustrated descriptions of American manufactures, it contains reports from United States consuls which claim the attention of every person who has considered the subject of our export trade. Its editorials are also pertinent to many phases of our commerce; but its advertising pages show a growth of interest and enterprise that can only be regarded with satisfaction. The current number of the *Mail* contains fifty-six pages of advertisements, which represent several times that number of different manufacturing interests. The paper trade is making a specially noteworthy display, no less than thirteen paper-making firms taking advantage of the columns of the *Mail* to spread the knowledge of their products all over the world. Several houses in the stationery trade are also represented. These interests have been slow to realize that there is a sale and a demand for Amer-

ican goods in other than home markets, but they are beginning to feel the force of the tide, and those who are first in taking advantage of it will earlier reap the profits. We again commend this export business to the attention and enterprise of our readers.

ANSWERS TO CORRESPONDENTS.

J. C. F. wants to know "Who is United States agent for De Haan & Co.'s pens?"

Ans.—This question, in another form, has already been answered here. A. De Haan, 47 Smithfield street, Pittsburg, Pa., is the manufacturer and "United States agent."

W. H. asks what Boston firm makes a low-priced travelers expense book.

Ans.—Winkley, Thorp & Dresser, Ward & Gay, and Cutter, Tower & Co.

NOTE.—In the list of mortgages printed in THE STATIONER of August 4, Ingalls & Co., Newark, N. J., were reported to have given a realty mortgage for \$2,502. The firm states that it has not given a mortgage, lien or encumbrance of any kind on any of its property. H. B. Thistle, a member of the firm, has had some private transactions in real estate which do not concern the house or its business.

T. B. Peterson & Brothers, Philadelphia, forward, through the United States News Company, a copy of Gustave Droz's novel, "Monsieur, Madame and the Baby." This work is written in a sprightly style which is eminently French, but it avoids the so called "realisms," which are only an excuse for broad allusions and suggestions. At the same time it has a soupçon of spice, felt rather than seen. It is a pleasant book to read and presents a revelation of youthful romance, domestic happiness and marital bliss, not usually associated with the lives of people whom it is supposed to illustrate. It consists of a series of studies, essays or tales, all neatly linked together and forming a complete history of a young man, a husband, a wife and a baby. The book is extremely vivacious. Droz's aim being to contrast the wild joys of the young bachelor with the enjoyments of married life, and to prove that true happiness is to be found only in the family, where husband and wife are softened, delighted and made better by the innocent gambols and wonderful prattle of the baby. It is said to have met with wonderful success in Paris, where to many it must have seemed a sort of revelation.

THE STRAW WRAPPING TRADE.

A meeting of the Eastern manufacturers of straw wrappings was called to take place at Stanwix Hall, Albany, on Tuesday of last week, but at the time appointed the attendance did not number more than a half dozen members, and even one or more of these had given previous notice of their withdrawal. Considerable reticence has been observed as to what took place, but it has leaked out that the number present did not constitute a quorum for the transaction of business, and, notwithstanding this, the time they were in session was principally occupied by the reading of letters of withdrawal from the organization. It is said that manufacturers representing fully 50 per cent. of the total product in the East have severed their relations with the association, which was organized last year, claiming to represent 90 per cent. of the total product in the East. It is understood that the purpose of calling the meeting together was to revise the last schedule of prices, which were merely nominal, and to adopt such a reduced scale as the trade could work by, but that a large number in the association, becoming convinced that no practical results would follow their continued membership and losing faith in the professions of its members, quietly withdrew from it, and purpose for the present to work their mills and market their product without restriction. This state of things in the trade is said to be due chiefly to the course pursued by the manufacturers themselves, who, although members of the association, have sought the large consumers, and as an inducement to them to buy directly have given them a discount equal to the commission charged by the commission dealers for handling their product. The commission dealers, in turn, have retaliated by making such prices as would meet those made by the manufacturers, and consequently prices have become very much demoralized. It is said that the meeting adjourned subject to the call of the Executive Committee, one member of which has withdrawn from the association.

Dr. Beale gives the following as the simplest method of copying an object magnified in the microscope: Arrange the paper on a piece of stiff cardboard, so that it may be upon the same level as the stage upon which the object is situated, on the left side, if the right eye is the one used for observation. If we now look steadily at the object with the right eye, it will be found that the object appears to be thrown, as it were, upon the paper, and it may be clearly seen by the left, and its outline readily traced, the movements of the pencil being executed by the right hand, if the observer is not able to use the left. By far the best course, however, is for the observer to acquire the habit of observing with the left eye, in which case the paper can be placed on the right hand of the stage, and the right hand used for drawing. With a little practice the relative position and correct size of objects may be insured in this manner. As microscopic practice is a requisite in the fine arts, like those of watchmaking and jewelry manufacture, this experiment may be worth trying.

Malleable brass, says the *Berg. u. Huttman Zeitung*, is made by allowing 33 parts of copper, and 25 of zinc, the copper being loosely covered with the zinc in the crucible. As soon as the copper is melted, zinc purified by sulphur is added. The alloy is then cast into molding sand, in the shape of bars, which are malleable into any form while hot.

PRACTICAL CONSIDERATIONS.

The *London Gazette* has something to say on the subject of business announcements, and while much of the credit which it accords to tradesmen in the United States is no more than is due, it nevertheless presents suggestions which, it is true, have been frequently made before, but which are none the less impressive and worthy of consideration. It says:

American advertisers have the reputation of an originality and smartness far in advance of that enjoyed by their European brethren. Some of their devices for securing publicity are of a character that we hardly wish to see imitated in this country; but there are two lessons—prudence and persistency—which many English tradesmen and business people might learn with advantage.

With the exception of the great advertisers, who know too well the value of publicity to forsake its advantages, the majority of people conduct their advertising business in a timid and irresolute manner, which usually results in pecuniary loss, and frequently disgusts them with what is, after all, the very life-blood of business, when really their own want of sagacity and pluck is alone to blame.

The ordinary advertiser goes in for a spurt, and while the fit is on him he will pay money to any journal he may fall across, or that may be introduced to him by a fifth-rate agent, for the sake of the blackmail paid in double commission. By and by the bills come in; the advertiser finds he has spent three times as much as he meant to; the specialty he has been trying to introduce has fallen flat on the public taste, or business generally has become dull, and he fancies buyers are few and little likely to pay attention to his announcements. He stops short accordingly, and loses nearly all the benefit of his previous expenditure.

The success reaped by those whose advertisements appear from year to year should teach men of business first to be careful in the selection of the medium they choose, and next, when satisfied on this point, to persevere, disregarding apparent failure, and never retrenching expenditure when business is dull. The man who shuts up his shop to save his expenses when trade was slack would be counted a fool; and yet he could hardly damage his reputation more than the advertiser who, for a similar reason, withdraws his announcements. The people who read the papers in dull times are those who buy when trade revives; and he who will get most of their custom is the man who has kept his name well before them when their attention was unoccupied.

Moreover, advertising in this country is left too much to large capitalists. If the small trader who is forever grumbling at his want of ability to compete with large houses, and at their comparative monopoly of public custom, would only remember that in the columns of the newspaper press he can at a comparative small cost command a publicity coextensive with the bounds of civilization and a certain lucrative return, richer and richer in results every succeeding year, he would doubtless more frequently use it.

Those who pride themselves on not being "advertising houses" should bear in mind that in trade nothing wears out faster than a good reputation when nobody ever hears anything about it. A Yankee contemporary tells a story, much to the point, of a town where everyone advertised with the exception of one man. Everybody thrived except him, but he obstinately declared nothing should ever make him advertise. He was mistaken, although he only discovered it

the day after his bankruptcy, when he had to instruct the auctioneer to advertise the sale of his business for the benefit of his creditors.

A new thing in grass-cloth, comes from Mozambique. It is extremely simple and artistic in design, and is in large pieces, the edging ready raveled and knotted for fringe. The price is five dollars a piece, and two or three pieces are required for a curtain, according to the height of the room. It is not necessary to line the curtains; the goods hang naturally in full, rich folds, and they are easily washed.

Market Review.

OFFICE OF THE AMERICAN STATIONER, {
WEDNESDAY, AUGUST 17, 1881.

THE MONEY MARKET.—The money market retains its ease in spite of the continued loss of reserves by the banks. While there is no cause for alarm in this, the conservatives are inclined to the opinion that the banks are sailing pretty close to the wind, and that a sudden contraction, if found necessary, might have an unfavorable effect on the money market. The stock market continues in a dull, monotonous and weak condition. The most important factor in the operations is the continued war between the great railroads, the contradictory crop reports, and the critical condition of the President. Government bonds were $\frac{1}{4}$ lower for the 4½s and extended 6s, and $\frac{1}{4}$ for the 4s. Railroad bonds were dull and generally lower. The market for foreign exchange was weak and fell to the point where gold can be profitably imported. The posted rates for prime bankers' sterling are down to \$4.82½ and \$4.84¼—a reduction of half a cent a pound. The actual rates are irregular—\$4.81¼@4.82¼ and \$4.83@4.84¼, with cable \$4.83¼@4.84¼, and prime commercial \$4.79¼@4.80¼.

THE PAPER MARKET.—The lower and more enjoyable temperature of the weather during the greater part of this week has had a beneficial effect upon all kinds of business, and the paper trade has come in for its share. Some of our city houses report the continued receipt of very good orders for paper to be made up and delivered in the early autumn. Considerable complaint is expressed at the low state of the water on some of the smaller streams, and a number of instances are reported of mills' being unable to run more than twelve hours per day. This has had a tendency to stiffen prices slightly on new contracts which are offering, particularly on news. Although news can still be bought at the same prices as have ruled for some weeks, there is a firmer tone to the market. No changes in prices of any grades are reported, and prices, with one or two exceptions, are fairly firm and steady throughout. A meeting of the Eastern straw wrapping paper manufacturers took place at Albany last week, and as will be seen by our report elsewhere, the manufacturers of about 50 per cent. of the total product embraced in the organization withdrew from it and propose to run their mills and market their product on the "go as you please" principle.

THE STATIONERY MARKET.—Business continues very active, and has progressed so rapidly that it is said that most of the heavy buyers have given their orders, and that for the remainder of the season trade will be confined chiefly to that larger number, the medium purchasers, and to those not so far distant from here as the Northwest and South. In the fancy goods line thus early in the season we hear of some houses being entirely sold out of some lines of goods and compelled to replenish stocks. The only thing on the business horizon that tends in any way as a set-back to the favorable progress of trade is the critical condition of the President this week, which seems to cause an unsettled feeling among business men of all classes; but strong hopes are entertained that our people may be spared such a calamity as the death of the Chief Magistrate. As regards prices no changes are reported, and staple goods throughout seem to be on a firm, substantial footing.

LEATHERETTE.

One of the many articles made of paper material gradually coming into general use is leatherette, which is manufactured by the Shawmut Manufacturing Company, of Boston, at Turner's Falls, Mass.

Leatherette is being brought into use in many ways, and is susceptible of beauty and economy, in various mechanical and ornamental appliances. It is so perfect an imitation of leather that its use is time and again had, without the user's being aware that they are handling something other than leather itself, and its serviceable nature renders the detection still more difficult. For all uses to which it has yet been applied, it is nearly if not quite as serviceable as leather, and gives excellent satisfaction to those who have occasion to use it or to deal in it.

Leatherette is only made in this country. The Japanese are the only people who manufacture an article to be at all compared to the American leatherette, and, although they make an excellent imitation, the price of their material is high, and they copy only few grains and colors, while American leatherettes can be made to imitate any grain of leather and in any conceivable color, so much so that it has rapidly grown into popular use for a great diversity of purposes, among which are book and pamphlet binding; silver, jewelry and all kinds of leather cases; fancy boxes for papeteries, pocketbooks, trunk linings, boot facings, table and desk coverings, wall paper, letter files, chess boards, &c.; and its durability has been proved by its use for covering whip handles. As its name implies, it is a close representation of leather, and when used in the different trades it answers the purpose to which it is put equally well with the real article. Being made of paper it enters only into competition with leather when it can be fastened to some more solid substance than itself, as, for instance, cloth for belts, wood for boxes, leather for inner sole linings, or pasteboard for book binding, although for flexible covers it answers without any support. Its surface wear is remarkably durable, as it is made on the same principle as oil cloth. Numerous imitations have been on the market for several years, but no exact imitation of leather has ever before been accomplished. The genuine leatherette, although unknown, even in name, only a few years ago, has now become an established article of trade, and taken a notable place among American products.

A find of great historical and bibliographical interest, relating to the annals of George Cadrenus, a Greek monk of the eleventh century, has been made at Basel. These annals originally formed part of a collection of Byzantine histories, the oldest manuscript copy of which was contained in a volume belonging to the library of Kanas in Paris. The text was, however, very imperfect, a portion being entirely lacking. A short time ago Herr Gieher, of Basel, acting on a suggestion from Dr. Studemann, the German savant, made a search for the missing portions in the University library of Basel, and succeeded in finding nearly all the missing leaves, fourteen in number.

Dr. Schliemann, now in Berlin superintending his collections, has received the very unusual title of "Honorary Citizenship," Prince Bismarck and General von Moltke being the only other living personages on whom it has been conferred. Dr. Schliemann has recently returned from a journey through the Troad, and especially the Ida Mountains, where he claims to have discovered the altar of Zeus.

OLD SILVER HUNTING IN BERGEN.

One of the most novel pleasures in Bergen is old silver hunting. There are shops where old silver is to be bought in abundance and at dear price. Old belts, rings, slides, buttons, broaches, spoons, of quaint and fantastic styles, some of them hundreds of years old. But the connoisseur in old silver hunting will not confine his search for treasures to the large shops on the thoroughfares. He will roam the city, keeping a sharp eye for little boxes tucked up on walls of houses, far down narrow lanes and byways—little boxes with glass sides, and a silver spoon or two, or an old buckle or brooch shining through. This is the sign that somewhere in that house he will come on a family that has tucked away in some closet a little box of silver that they will sell. Often they are workers in silver in a small way; have a counter in the front parlor and a tiny workroom opening out behind, where they make thin silver spoons with twisted handles, and brooches with dangling disks and crosses, such as all the peasant women wear to-day, and a hundred years hence their grandchildren will be selling to English and American travelers as "old silver." The next century, however, will not gather such treasures as this one; there is no modern silver to compare with the ancient. It is marvelous to see what a wealth of silver the old Norwegians wore—buckles and belts which are heavy, buttons which weigh down any cloak, and rings under which nineteenth century fingers, and even thumbs, would ache. And the farther back we go the weightier become the ornaments. In the Museum of Northern Antiquities, in Copenhagen, are necklaces of solid gold, which it seems certain that noble Norwegian women wore in King Olaf's time—necklaces in the shape of a single snake, coiled, so heavy that they are not easily lifted in one hand; bracelets, also of that same snake shape, which a modern wrist could not wear half an hour without pain.—*Atlantic Monthly.*

A BOUNDARY LINE OF THE UNITED STATES.

The northern boundary of this country is marked by stone cairns, iron pillars, wood pillars, earth mounds and timber posts. A stone cairn is seven and a half feet by eight feet, an earth mound seven feet by fourteen feet, an iron pillar seven feet high, eight inches square at the bottom and four inches at the top; timber posts five feet high and eight inches square. There are three hundred and eighty-five of these marks between the Lake of the Woods and the base of the Rocky Mountains. That portion of the boundary which lies east and west of Red River Valley is marked by cast-iron pillars at even mile intervals. The British place one every two miles, and the United States one between each British post. Our pillars or markers were made at Detroit, Mich. They are hollow iron castings, three-eighths of an inch in thickness, in the form of a truncated pyramid, eight feet high, eight inches square at the bottom, and four inches at the top, as before stated. They have at the top a solid pyramidal cap, and at the bottom an octagon flange one inch in thickness. Upon the opposite faces are cast, in letters two inches high, the inscriptions: "Convention of London," and "October 20th, 1818." The inscriptions begin about four feet six inches above the base, and read upward. The interiors of the hollow posts are filled with well seasoned cedar posts, sawed to fit, and securely spiked through spike-holes cast in the pillars for the purpose. The average weight of each

pillar when completed is eighty-five pounds. The pillars are all set four feet in the ground, with their inscription faces to the north and south, and the earth is well settled and stamped about them. For the wooden posts well seasoned logs are selected, and the portion above the ground painted red, to prevent swelling and shrinking. These posts do very well, but the Indians cut them down for fuel, and nothing but iron will last very long. Where the line crosses lakes, mountains of stone have been built, the bases being in some places eighteen feet above water, and the tops projecting eight feet above the lake's surface at high water mark. In forests, the line is marked by felling timber a rod wide, and clearing away the underbrush. The work of cutting through the timbered swamps was very great, but it has been well done, and the boundary distinctly marked by the commissioners the whole distance from Michigan to Alaska.

THE PROPOSED NATIONAL BANKRUPT LAW.

The United States Senate authorized its committee on the judiciary to sit during the recess of Congress, to consider the question of establishing a uniform bankruptcy law. A circular, inviting the opinion of merchants, was sent by Senator Ingalls, chairman of the sub-committee, to commercial bodies throughout the country. D. C. Robbins, of McKesson, Robbins & Co., chairman of the special committee on bankruptcy laws of the Chamber of Commerce, of this city, in a reply upon the subject, says:

All our past bankrupt acts did encourage insolvency, and their repeal became a necessity. In any measure that may be adopted hereafter, as compared with the law of 1867, we are of opinion that the officers should be compensated by fixed salaries as far as possible; that the powers of the register should be increased; that the amount of indebtedness authorizing the filing of a petition in voluntary bankruptcy should exceed \$300—should be at least \$1,000; that composition settlements should be continued only under court control over the discharge of the bankrupt; that the discretionary power of the court relating to the granting of discharges should be greatly enlarged.

Composition settlements may be continued, but they should be carefully guarded, and a discharge in settlement through composition should never be allowed without the approval of the court, as well as a majority of the creditors in number and three-fourths in value. We want a simple law to be executed by a responsible court, with salaried officials, as far as possible; and a discharge of the bankrupt should never proceed from the creditors. To allow a portion of the creditors of a bankrupt to discharge the party from obligation to all his creditors is both unwise and unjust—it is as absurd as to allow the settlement of crime or theft by compromise without judicial examination. Every attempt to construct a bankruptcy law in this country and Great Britain by dispensing with court supervision over the discharge of the bankrupt has proved a failure.

Mr. Robbins criticises the laws of Great Britain, and also some of the provisions of the Lowell bill, which he does not think wise to adopt. In conclusion he says:

We beg to express an earnest desire that your committee will not recommend any bankrupt act that does not provide for court supervision over all discharges in bankruptcy. It is more necessary in bankruptcy settlements that a proper distinction be recognized between integrity and dishonesty than that the utmost dividend be obtained for the creditor; and all experience has proved that this discrimination cannot be safely intrusted to the creditor, as the creditor is principally intent upon his dividend

Hundreds of young men waste hour after hour thinking over what they might do if they only had the time.

"THE GREAT ROCK ISLAND ROUTE"

Calls your attention to the following REASONS WHY, if about to make a Journey to the GREAT WEST, you should travel over it.

As nearly absolute safety as is possible to be attained. Sure connections in UNION DEPOTS, at all important points. No change of cars between CHICAGO, KANSAS CITY, LEAVENWORTH, ATCHISON or COUNCIL BLUFFS. Quick journeys because carried on Fast Express Trains. Day cars that are not only artistically decorated, but furnished with seats that admit of ease and comfort. Sleeping cars that permit quiet rest in home-like beds. Dining cars that are used only for eating purposes, and in which the best of meals are served for the reasonable sum of seventy-five cents each. A journey that furnishes the finest views of the fertile farms and pretty cities of Illinois, Iowa and Missouri, and is afterwards remembered as one of the pleasant incidents of life. You arrive at destination rested, not weary; clean, not dirty; calm, not angry. In brief, you get the maximum of comfort at a minimum of cost.

That the unremitting care of the Chicago, Rock Island & Pacific Railway for the comfort of its patrons is appreciated, is attested by its constantly increasing business, and the fact that it is the favorite route with delegates and visitors to the great assemblages, political, religious, educational and benevolent, that assemble from time to time in the great cities of the United States, as well as tourists who seek the pleasantest lines of travel while en route to behold the wonderful scenes of Colorado, the Yellowstone and Yosemite. To accommodate those who desire to visit Colorado for health, pleasure or business, in the most auspicious time of the year, the summer season and months of September and October, the Company every year puts on sale, May 1st, at all coupon ticket offices in the United States and Canada, round trip tickets to

DENVER, COLORADO SPRINGS AND PUEBLO.

At reduced rates, good returning, until October 31st. Also to San Francisco, for parties of ten or more, good for ninety days, at great reduction from regular fares.

REMEMBER, this is the most direct route for all points WEST and SOUTHWEST. For further information, time-tables, maps or folders, call upon or address

THE LAW OF CURVES.

Curves, says an English author, played a large part in ornament, and often they were drawn in an unscientific manner. A universal law was that all curves, whether springing from other curves or from straight lines, should be struck at a tangent to the lines from which they diverged; and when curves conformed to this rule the effect was agreeable and natural, and when it was departed from the effect was weak and crippled, because the lines would appear to cut through one another, whether continued to that point or not. Further, in two designs of leaves springing from common basis, that in which the stems ended parallel to each other would look better than that in which they approached one another: for in the latter the mental effect would be to continue the lines so as to intercept each other. The effect of these qualities of rhythm, repetition, geometrical symmetry, alternation, equal distribution of spaces, and proper relation of curve to curve, made up what might be termed abstract ornament.

"Ornament should not attempt to directly imitate nature; but a large class of genuine ornament was based upon the adaptation of natural forms. There was a beautiful class of ornament not derived from these forms, and which might be distinguished as 'abstract' ornament. In the decorative work of all savage nations a great proportion of the ornament was produced by filling up the space treated with simple lines having little meaning or purpose in themselves. This abstract ornament might be traced in a higher form in Egyptian art, and reached its greatest development of perplexity and mystery in Sarcenic art, in which a puzzling and complicated effect was produced by the shifting and rearrangement of a few lines. The familiar Greek key pattern was in like manner a collocation of squares, with one side cut away, interwoven with one another. One of the most intricate Sarcenic patterns was a series of concentric hexagons, slightly tilted. Ornament could be produced not only by drawing on a surface, but by varying that surface so as to produce an alternation of light and shade. Ornament derived from nature, while it must not imitate, might have various degrees of approach to nature, governed in their nearness of likeness to a considerable extent by the nature of the material and medium worked in. Thus in crewl work exact symmetry should be avoided, and the imitation of nature might be comparatively near, but ornament to be placed on a building should be architecturalized. A leading reason against the attempt to precisely copy nature was that in most media it could not be done successfully; the direct effort to reproduce a flower in carving only called attention to the absence of the delicacy, the finish, the fragility of the natural form. Again, such minutely copied work violated the necessity for fitness for its space and purpose. The principal governing growth in nature must be observed in ornament—e. g., as in actual life, all curves must spring in the same direction, whether flowing from right or left of a central stem, and it was an obvious mistake to repeat the trailing festoons, so appropriate in Renaissance decoration for a wall surface, upon a ceiling. The grotesque did not suggest a misuse or degradation of the subject, and might be more boldly employed. The use of grotesque animals upon jugs or other domestic vessels is almost universal throughout the world. The imitation of artificial objects was invariably bad, because it brought back the mind to everyday matter, and it was generally a proof that it was introduced to save trouble and thought.

Artificial objects were very frequently used in Roman and Renaissance work, and also in a great deal of the work by Grinling Gibbons, which was often very faulty in conception, although admirably executed."

THE HANGING OF WALL PAPERS.

Many people may have noticed the often disgusting odor proceeding from the size and paste of paper hanging pervading an apartment for some time after the paper has been newly hung. M. Vallin, in the *Revue d'Hygiene*, reports an interesting case, which has induced him to make some inquiries in this matter. A lady who, from time to time, came to town to supervise the decoration of her house, was three times successively seized with violent sickness and headache after sleeping in a newly papered room. M. Vallin was struck with the putrefactive odor which pervaded the atmosphere and, after examining into the matter, came to the conclusion that it proceeded from the wall. It was found that a horrible putrefactive odor proceeded from the size pot with which the paper hanger in the next room was continuing to hang the wall papers, and that his size was in a state of putrefactive change. On making further inquiries, various other cases have come under his notice in which illness has palpably been produced by the use, by paper hangers, of size and paste undergoing or speedily entering on septic change; and it is extremely desirable that this should be borne in mind and, if necessary, a little oil of cloves, salicylic acid, or some other antiseptic agent should be added to the material which they use for this purpose, or, at any rate, care should be taken to avoid these disagreeable consequences of carelessness, which is only too common.—*Sanitary Record*.

One of the recently introduced substitutes for gold, which has become very popular in some of the jewelry and other manufactories of fine wares in France, is composed as follows: 100 parts, by weight, of copper of the purest quality, 14 of zinc or tin, 6 of magnesia, 3 and 6-10ths of sal ammoniac, limestone, and cream of tartar. The copper is first melted, then the magnesia, sal ammoniac, limestone, and cream of tartar in powder are added separately and gradually. The whole mass is kept stirred for half an hour, the zinc or tin being dropped in piece by piece, the stirring being kept up till they melt. Finally, the crucible is covered, and the mass kept in fusion thirty-five minutes, and the scum being removed, the metal is then poured into molds, and is ready for use. The alloy thus made is represented as being fine-grained, malleable, takes a high polish, and does not easily oxidize.

The most delicate of the Spanish combs are made of pale amber tortoise shell, and these in any shade of hair darker than blonde are exceedingly handsome. For blonde or light hair of any shade, the dark or mottled shell is very effective. These combs show many novel designs, among them being richly carved oval bales, upon which are wrought very beautiful and delicate heads and other devices. Where it is becoming, it is very fashionable to wear the hair in antique *rouleaux*, after the fashion of the olden times, setting the Spanish comb high among the coils of wavy hair.

Calendars painted on white satin are among the pretty adornments of the writing desk. These are framed in colored ribbons, which are either embroidered or painted, and hang as bannerets on little gilt standards.

PAPER FLOOR COVERING.

As a feature of household economy a new paper floor covering is said to be durable and cheap. It further renders floors air-tight and, doing away with matting, carpet, oil cloth, or other floor covering, it can be washed or scrubbed at pleasure.

It is in fact a kind of papiermaché process for covering floors, and is carried out in the following manner:

The floor is first thoroughly cleaned. The holes and cracks are then filled with "paper putty," made by soaking newspaper in a paste made of wheat flour, water and ground alum, as follows: To one pound of wheat flour add three quarts of water and a tablespoonful of ground alum, and mix thoroughly. The floor is then coated with this paste, and then a thickness of manilla or hardware paper is put on. If two layers are desired, a second covering of paste is put on the first layer of manilla paper, and then the second thickness of manilla paper is put on. This is allowed to dry thoroughly. The manilla paper is then covered with paste, and a layer of wall paper of any style or design desired to put on. After allowing this to thoroughly dry, it is covered with two or more coats of sizing made by dissolving one-half pound of white glue in two quarts of hot water. After allowing this to dry, the surface is given one coat of "hard oil finish varnish," which comes and is bought already prepared. This is allowed to dry thoroughly, when the floor is ready for use.

ART CASTINGS IN IRON.

The editor of "The World's Work," in *Scribner's Magazine* for August, has the following mention of the recent productions of the Magee Art Castings:

While there is no change of importance to be observed within the past fifty years in the methods used in simple iron founding, it may be observed that American practice in this ancient art has recently risen to a remarkable degree of perfection. The very fine castings produced by some of our stove foundries suggested the application of cast iron to the reproduction of various art works in bronze, silver and brass. Experiments were recently made in an ordinary stove foundry with such tools, material and labor as could be found, and using some antique brass work for patterns. Very great pains were taken to secure the best materials for molding, fuel and iron, and the work was given to skillful stove founders who had never been employed on any art castings, the aim in this respect being to bring the work to a commercial as well as art basis. The result was sufficient to warrant an exhaustive series of experiments to ascertain what degree of fineness could be obtained with such men and materials. Antique swords and ornamented helmets, brass sconces, Persian bronze and silver plaques, Japanese bronze trays with foliage in low relief, and many

other fine works, were tried as patterns and with marred success. An examination of the foundry, while in operation, and a large number of castings in imitation of these and other works, warranted the belief that a new field of art industry is now fully established in this country. Among the pieces seen in cast iron were the "Siege of Troy" shield by Cellini, a copy of a brass plaque with head of Shakespeare, showing very fine work in imitation of fabrics, a work in *repoussé* after Tennyson, some copies of medallion ornamented with foliage and flowers, and designed for wall decoration, and a copy in iron of a bronze Japanese tray, only 1-16 of an inch thick. All the work is in simple cast iron and is not designed to have any special finishing. Some of the work was polished to show the natural color of the iron, and others were copper plated and oxidized, or otherwise treated to imitate other metals. In the work no novelty of materials or methods is employed, and the results are obtained wholly by skill in manipulation and in choice of metal. The iron used is chiefly American, with a slight mixture of Scotch pig. The castings have already attracted great attention among architects and others interested in metal work, and will, no doubt, do much to bring fine copies of decorative work of this class within the reach of all.

A report has been circulated by certain parties that the O. W. Busybody schoolbag manufactured by R. Fideau, 16 Beekman street, is "heavily loaded with starch, and that it is a fraud." Mr. Fideau desires it to be understood that the best answer to these false statements is his order book, in which are daily recorded his large orders, many of which he is behindhand in filling, owing to their coming in so fast. As for the starch, an examination of any school bag ever made by him will prove the falsity of what has been asserted, and will, he says, show plainly that only a spirit of jealousy has caused this attack upon the reputation of his goods.

The Duke of Portland recently acquired by legacy a little table upon which he paid probate duty at a valuation of 10,000 guineas. It is 2 feet wide, 2 feet 9 inches high, and 18 inches deep: the top, frieze, and back are overlaid with old Sèvres plaques, and the mounts are very highly chased and gilt.

PAPER PLATES.

The latest application of paper is the adoption of paper plates by some of the great restaurants in Berlin, Germany. The innovation was first introduced during the summer of last year by the adventurous landlord of a much frequented open-air restaurant. Every customer who ordered bread and butter, rolls, cakes, buns, or similar articles, had them served to him upon a paper plate, made of a light papier-maché, adorned with a pretty border in relief, and having at a first glance a great similarity to porcelain. Guests, waiters and hosts were all pleased with the novelty; it saved the waiters many a deduction from their wages on account of breakages, which the deftest and cleverest of *Kellners* can scarcely avoid when he handles hundreds of pieces of crockery during a single afternoon and evening. The paper plates were so cheap that the landlord did not care to assert his ownership over them, and his customers were allowed to carry them away, like the pretty *serviettes* of thin paper used in so many restaurants in Holland. There was also a considerable saving of the time lost and the chances of accident incurred in the cleansing of the earthenware pottery. The success of the experiment has been so marked that the new species of plates is likely to be introduced into a great number of restaurants

THE SONOROUS PROPERTIES OF MATTER.

Professor Bell's discoveries in connection with the production of sound by radiant energy will doubtless prove of vast importance even in the present unprecedented advancement of science. These discoveries arose from the experiments which resulted in the construction of the telephone, and may be summed up in the general proposition that "sonorousness under the influence of intermittent light is a property common to all matter." The sonorous properties of a large number of substances were examined, and it is found that the intensity of effects in the case of solids depends upon the physical condition and the color. The materials to be experimented upon are exposed in tubes to a ray of light rendered intermittent by a rotating disk. The loudest sounds were produced from substances in a loose, porous, spongy condition, and from those that had the darkest or most absorbent colors. The materials from which the best effects have been produced are cotton wool, worsted, fibrous materials generally, cork, sponge, platinum, and other metals in spongy condition, and particularly lamp-black. This latter substance gave important results. Professor Bell's theory is that sounds are produced by alternate waves of air absorbed and expelled from among the particles of lamp-black, by the expansion and contraction caused by the intermittent heating and cooling. He does not seem to think that molecular vibration alone would account for it. It is also found that the very great molecular disturbance produced in lampblack by the action of intermittent sunlight produces a corresponding disturbance in an electric current passed through it, so that lampblack can be employed in place of selenium in an electrical receiver. The importance of this discovery is very great, especially when the expense of such rare substances as selenium and tellurium is considered. In connection with the solar spectrum the fact is disclosed that the maximum of sound varies with the point of position.

With lampblack the loudest effect was obtained in the ultra red. With red worsted en-

tirely different results were obtained. The maximum effect was produced in the green at that part where the red worsted appeared to be black. On either side of this point the sound gradually died away, becoming inaudible on the one side in the middle of the indigo, and on the other at a short distance outside the edge of the red. With green silk the maximum was found in the red with the limits of audition in the blue on the one hand, and the ultra red on the other. Hard rubber shavings gave a maximum in yellow. These experiments have led to the construction of a new instrument for use in spectrum analysis. The eye piece of a spectroscope is removed and sensitive substances are placed in the focal point of the instrument behind an opaque diaphragm containing a slit. These substances are put in communication with the ear by means of a hearing tube, and thus the instrument is converted into a veritable "spectrophone." The chief use of this instrument, Professor Bell thinks, will be in the investigation of absorption spectra in the ultra red, a wide and important field hitherto unexplored.

The city of Cologne has recently acquired a valuable Roman glass vessel, a vial in the shape of an ape in a sitting posture. The figure has round its neck a *syrix* or pastoral flute. The date of the second century of the Christian era has been assigned to it, and it is pronounced unique by the highest authorities. It has recently formed part of the collection of Carl Damian Disch, a large hotel proprietor in Cologne, and was with other articles of *virtu* offered for public sale at his death. Herr Thewalt, himself a collector and burgomaster of Cologne, secured it for 3,000 marks (£150). On his representations, the heirs of the estate munificently took on themselves the expense, and presented the vessel to the Cologne Museum. It is of the same kind as the Roman glass vessels in the National Museum at Naples.

Frances Anne Kemble has written a continuation of her "Records of a Girlhood," which will be published this fall under the title "Records of a Womanhood." The new volume promises to be even more entertaining than the first, for it contains letters from and anecdotes relating to some of the foremost literary and theatrical men of the past thirty years.

UNITED STATES COURT DECISION.

Judge Shipman in the United States Circuit Court for the District of Connecticut, in the case of Griffiths *et al.* v. Holmes, Booth & Haydens, has given the following decision: This is a bill in equity to restrain the defendant from the infringement of reissued letters patent of September 24, 1872, to Josephine Cary and Clementine Griffiths, assignees of Harry S. Griffiths, for an improved suspension ring for business cards, so that they can be easily hung against a wall. The original patent was issued to said H. S. Griffiths May 5, 1868. The device consists of a ring of thin sheet metal having a shank or bottom piece provided with sharp spurs, which are pushed through the card and turned down on the opposite side. These spurs are made like those of the little article in common use as paper fasteners. The novelty of the patented device was anticipated by an umbrella fastener, called upon the trial "Twitchell's Umbrella Fastener," which was made by the American Ring Company, of Waterbury, Conn., for some years, beginning in the summer or fall of 1865, and which is still in common use. This fastener is a ring of sheet metal with spurs, which are pushed through the india rubber band, which serves to keep a folded umbrella in place. The ring attaches the end of the band to a button or hook. The suspension ring is like the umbrella fastener, except that the former has a longer shank than the latter, because it is a matter of convenience that after the spurs have been fastened to the card the whole circumference of the ring should be unoccupied, so as to permit it to be easily slipped upon a nail. This is an obvious matter of construction, and the necessary change requires only mechanical taste and skill. Substantially the same article is used for two objects, and the new use is quite analogous to the purpose for which the article was previously used.

The bill is dismissed.

As long ago as 1684 a public drinking fountain was erected near London. Sir Samuel Morland, a philanthropist living in Hammersmith, observed the scarcity of good water in his neighborhood and, feeling that the poor suffered greatly from the need of it, he caused a well to be sunk in his own grounds, and constructed an ingenious pump over it, a very rare convenience in those days; and a tablet fixed in the hall of his house bears this record of the deed: "Sir Samuel Morland's well, the use of which he freely gives to all persons, hoping that none who shall come after him will adventure to incur God's displeasure by denying a cup of cold water (provided at another's cost and not their own) to either neighbor, stranger, passenger, or poor, thirsty beggar. June 25, 1685."

Polished steel may be beautifully gilded by means of the ethereal solution of gold. Dissolve pure gold in aqua regia, evaporate gently to dryness so as to drive off the superfluous acid, redissolve in water, and add three times its bulk of sulphuric ether. Allow to stand for twenty-four hours in a stoppered bottle, and the ethereal solution of gold will float at top. Polished steel dipped in this is at once beautifully gilded; and by tracing patterns on the surface of the metal with any kind of varnish, beautiful devices in plain metal and gilt will be produced. For other metals the electric process is best.

He who makes a great fuss about doing good will do very little; he who wishes to be noticed when doing good will not do it long.

SCOTLAND'S FIRST PRINTER.

It is but the assertion of a natural feeling to say that Scotch typography is not so generally interesting to English bibliographers as the typographical history of their own country. Ames, 1749, could only occupy 22 pages for the whole account of Scotch books up to the year 1600. Herbert in 1700, with additions and extracts, more than doubled this; but they both credited Walter Chapman with the honor of being Scotland's first printer. Dr. Dibdin, although padding out his typographical antiquities to four volumes, left Scotland out of his work altogether. Dr. Dickson now comes to the rescue, and in a very terse and clear manner shows that the real Caxton of Scotland was Andrew Miller. Several very interesting books and unexpected facts have been discovered within the last years, which throw much light upon this subject. These few Dr. Dickson has put together as a connected whole in the present charmingly printed tract, the essence of which we will now proceed to lay before the reader.

Andrew Miller, or, as he spells his name, "Andrew Myllar," was a bookseller in Edinburgh, with whom King James IV. had dealings. In 1503 he sold to his sovereign, through the means of his wife, "iij prentit buiks." As Mistress Miller is expressly mentioned as taking the money, we may safely assume that her husband was away. That he was with Hostingue at Rouen, learning the art and craft of printing, cannot be doubted, when we find him printing there in 1505 a Vocabulary of John de Garland. There also, in 1506, he printed "Expositio Sequentiarum."

At this time in Edinburgh lived a wealthy merchant, named Walter Chepman or Chapman, who, like Miller, was well known to the King. In 1507 a warrant was issued to Walter Chepman and Andrew Miller to bring over to Scotland a printing press with all its accessories, together with proper men to work it. Chapman found the money and Miller the practical knowledge, and between them the press was set up. It began with several small poetical pieces and the Aberdeen Breviary, which latter was completed in 1509-10. Of Miller we know nothing more; Chapman died in 1528.

This, in short, is the whole history, and we are greatly indebted to Dr. Dickson for thus putting on record for the first time these interesting facts. It may be remembered that some most instructive papers or early Scotch printing were contributed in 1878 to this journal by the same talented antiquarian, who may now rank among bibliographers as the best authority on all questions connected with the early press of his native country.—*Printers' Register.*

An excellent imitation of the celebrated Chinese gold lacquer may be prepared by melting two parts of copal and one of shellac, so as to form a perfect fluid mixture, and then add two parts of hot boiled oil. The vessel is then to be removed from the fire, and ten parts of oil of turpentine gradually added. To improve the color, an addition is made of a solution in turpentine of gum gutta for yellow and dragon's blood for red. These are to be in sufficient quantity to give the desired shade. The Chinese apparently use tinfoil to form a ground, upon which the lacquer varnish is laid.

Henry Morley, well known for his "Sketch of English Literature," was originally a doctor, then Dickens' assistant on *Household Words* from 1851 to 1857, afterward editor of the *Examiner*, and since 1859 has been professor of English literature, first in King's College, afterward in University College, London.

Charitable Mechanics' Association, Franklin Institute of Philadelphia,
Louisville Exposition, Medal and diploma from United States Centennial
Commission, Medal of Progress American Institute, 1877, and Medal of
Improvement and Progress, Boston, 1878. Its

PRINCIPAL ADVANTAGES

are as follows:—1. It contains more LINEN than any other Ledger
Paper, has a longer fibre, and is, consequently, tougher. 2. Having a
harder and better body, it frays less in erasure, so that by simply using
the rubber alter the eraser, the ink is prevented from spreading. 3. It is
more uniform in Weight Color and Finish. 4. It never cockles if properly
bound. 5. Its chemical action upon ink is such that it both writes and rules
up better. For proof of the foregoing, refer to a large number of Sta-
tioners, Bookbinders, Bookkeepers, and Recorders, who have given it,
after a severe test, the preference over all others. This paper is *Double*
Sized, and will stand any climate or the most acid of fluid inks.

Send for sample sheet, ERASE and REWRITE FOUR TIMES on same spot.
Each sheet is water-marked with name and date.

BALTIMORE NOTES.

[FROM OUR REGULAR CORRESPONDENT.]

BALTIMORE, Md., August 23, 1881.

There has been a decided improvement in business since I last wrote you, and the prospects for a boom next month are most encouraging.

J. R. Edwards & Co. have added some new designs to their already extensive line of blank books, and are looking for a good fall trade.

Dell & Knapp, bookbinders, are very busy with their blank book and school book binding for the fall.

W. E. C. Harrison says that the fall trade has opened with him very nicely and that he expects a good business to follow.

A first class trade in book and newspaper goods is reported by Smith, Dixon & Co., Mudge & Chapman and John A. Dushane & Co., wholesale paper dealers. Their business in Washington has been exceedingly large for the past six weeks, all on account of the President, the various papers having been compelled to issue many extra editions.

John B. Piet states that his orders for slates so far have been as numerous as they were last season.

"Fair Dealing's" letter on the "Slaughtering Trade," in your issue of the 11th inst., has attracted the attention of the dealers in this city. The stationers and booksellers here have suffered in the same manner as their brethren in Washington. Last Christmas a number of the fancy and dry goods houses had all of the new holiday books and made a leader of their selling them at about 5 to 10 per cent. advance of cost, disposing at the same time of their own line of goods at a big profit. Thus the book and stationery men had to stand the brunt of the "loss of trade." It is the opinion of the sufferers that houses engaged in this kind of business should be "boy-cotted" out of town. One dry goods firm on Lexington street now disposes of boots, shoes, hats, caps, rubber goods, jewelry, books, stationery and soda water, &c. A Baltimore street house, which a few years ago was noted for its dry goods throughout Maryland and Virginia, now displays in its windows a full line of Christmas cards, which I suppose will be sold at cost. Writing of these monopolizers reminds me of the "enterprise" of one of their ilk I once read about. He carried on a big clothing house in Liverpool, England, on a leading street and opposite an ancient church which was surrounded by an extensive graveyard.

Not satisfied with his clothing business, he added goods of every conceivable description, until the people began to suspect that he had located opposite the burying ground with a view of finally securing the land for a coal yard! That, however, for a wonder, proved to be a mistake.

But, seriously speaking, no one is to blame for the monopoly but the manufacturers. In regard to the Christmas cards and holiday books, they first sell to the regular trade and then dispose of full lines to these butchers of legitimate business. Some members of the trade are very reluctant to handle goods of this kind this season, and should the slaughtering business continue I think the booksellers and stationers will have to lay in stocks of white dresses, striped stockings, low cut shoes, a few Black Hill diamonds, and a full line of collar and cuff buttons.

Among the visiting members of the trade recently here were R. M. Clarke, of the Tower Manufacturing Company, New York; Alf. J. Briggs, Hampshire Paper Company, Philadelphia; Newton T. Otis, manager of the Acme Stationery and Paper Company, New York; Robert C. Miles, representing Charles Beck, of Philadelphia; G. A. Whitaker, of Washington, D. C., and C. S. Cooke, of Cooke & Cobb, New York.

W. P. M.

TORONTO NOTES.

[FROM OUR REGULAR CORRESPONDENT.]

TORONTO, Ont., August 20, 1881.

The directors of the new paper mill company who for some time past have been running about the province looking at sites, and receiving deputations coming with offers to induce them to establish the mill in the different localities they represented, have, according to latest information, come to anchor, and have decided to build at Lock 18 on the Cornwall Canal. As there has been no contradiction to this statement published some days ago, it may be taken, I presume, as being correct. How soon work will be commenced has not yet been made known, neither do I know what inducements caused the company to make this selection. There are other places which I think had the preference in the minds of nearly all the parties interested. However, the choice has been made, and we hope it will prove most satisfactory to all concerned. The men composing the company are practical business men, with abundant means, and judging from their antecedents are pretty sure to push any undertaking they put their hands to, to a satisfactory conclusion. The system of giving bonuses, which prevails here to a considerable extent to induce the erection of factories, I believe in nine cases out of ten to

be wrong. If the principle is correct in a large way, it is also in a small one. Should a trader wait on any of our corporations with a proposition to start a store, providing they would aid him, he would be laughed at. Manufactures are an acquisition to any place, and those undertaking them embark their capital to make money, just as the individual trader does. Such being the fact, is there any reason why the community should be taxed to aid a large undertaking in trade any more than a small one. If there are not openings for manufacturers, bonuses will not make them successful any more than in ordinary traffic when there are enough in it already. Success depends on the demand, the quality of the product, the enterprise of the management and the suitability of the locality. Bonuses are a capital invention for adventurers. If they make a hit, all right; if not, the loss is spread over the locality, to be wiped out by taxation.

The summer's business, now drawing to a close, was very satisfactory, and the trade has made preparation for a large fall business. There is hardly a doubt but that their anticipations will be fully realized.

We are also drawing on to the season of exhibitions; and from all that can be gathered, the Dominion Exhibition at Halifax, the Provincial Exhibition at Montreal, and the third annual Industrial Exhibition at Toronto will all be successes. I can speak with a degree of certainty respecting the show which will open here next month, that it will be ahead of former exhibits, and that is saying a good deal.

J. Brown, of Brown Brothers, and others have just returned from an outing in Muskokee. They had a fine time of it, and speak in glowing terms of that region as a healthful summer resort.

I am pleased to note the safe return of Mr. Carrier, the head of the enterprising fancy goods dealers, Carrier, Marshall & Co., of this city, and a hasty run through their warehouse convinces me that they must command a very large share of the fall trade, which now promises so well and for which they are so well prepared.

S. Hart, of Hart & Co., has also returned from a visit to your city. They have perfected their arrangements and are pushing the completion of their premises in King street, which when done will be one of the finest stores in the city. The firm expects to be at work in a short time.

There are several buyers from Winnipeg in town just now. The trade of this new city is increasing with wonderful rapidity.

Notwithstanding Vennor's predictions of cold and frost this month, it continues remarkably hot. It would be a relief to get a touch of cold,

for, really this sweating process has gone on so long, that one has hardly enough ambition left to wipe his face.

It is stated that a French banking house will be opened in Quebec next year. French capitalists are turning their attention to our country, and beside the *Crédit Foncier*, already in operation, beet sugar factories, phosphate mining, and a line of steamers, numerous other enterprises are on the tapis. Let them come; we have room and fruitful fields for enterprise.

C. H.

NEW CARDS.

A decided novelty in the card line is Prang's new "Birth Announcement Cards," which show another special use for cards not thought of before. The underlying idea is a very pretty one, and its conception, as well as its execution, are decidedly poetical. The words are well adapted to the occasion, and a neater announcement of the happy event no parents can well use. There are four designs of these cards, executed in tints, and surrounded by a white and a gold margin.

The first design is that of the front door of a house, wide open, and bearing the word "Welcome" upon it. A stork is just flying in through it, carrying in his beak a newborn baby. Underneath is the verse:

"Where did you come from, baby dear?"
 "Out of the Everywhere, into the Here."
 "But how did you come to us, you dear?"
 "God thought of you, and so I am here."

The next design shows the baby in a boat, impelled by an angel. The mast of the boat forms a cross, ornamented with flowers and garlands, and the sail shows a horseshoe, the emblem of luck. This design is accompanied by the words:

Only a baby small,
 Never at rest;
 Small, but how dear to us
 God knoweth best.

The third design shows a little boy and girl digging in a cabbage field. They have just dug up a big cabbage head containing a baby, and, surprised and happy, contemplate the "Treasure Trove." The sun rising above the horizon is indicative of the new life. Underneath:

Only a baby small dropp'd from the skies!

The fourth design represents an angel, descending from above, just laying a baby into a cradle, richly ornamented with flowers. The accompanying words are:

Only a tender flower
 Sent us to rear;
 Only a life to love
 While we are here.

On all of these cards there is room left for writing or printing in the particulars of the happy event, and as the whole idea is a very pretty and happy one, it is thought that there can be no doubt but that these cards will find a large sale wherever exhibited, and that no dealer should hesitate to give them a fair trial. They are packed in neat boxes, each holding twenty-five cards with twenty-five suitable envelopes.

Another novelty, just issued by L. Prang & Co., are two new sets of Thanksgiving cards, added to the first set published last year, which met with such a decided success. Set No. 1 contains twelve conventionalized fruit designs. Set No. 2 shows also conventionalized fruit designs on delicately ornamented groundwork. There are six designs. Each card gives a carefully selected quotation from our best poets and, underneath, the words "A cheerful Thanksgiving to you." Set No. 3 comprises four comical designs, exceedingly happily conceived, with suitable quo-

tations from Shakespeare. Set No. 4 is intended for plate cards, and as such very commendable. It consists of neat fans, quite novel in design. There are three designs of these, put up double faced, so as to show a picture on either side. A handsome fringe enriches their appearance and gives them an elegant shape. They bear no lettering at all, being intended only to take the guest's name. A new edition is now ready again of the well known "Shakespearean Dinner Cards," which were so well received last year.

L. Prang & Co. deserve much credit for their enterprise and energy. Their Christmas and birthday lines this season far exceed all their previous efforts in the card line. A description of these lines will be found in the next issue of THE STATIONER.

OLD TIMES.

Paper hangings were originally just what their name indicates, viz.: strips of paper suspended from the ceiling in such a manner as to cover the imperfections of the walls. They were used exclusively in the houses of the rich; the poor man in his hut had no such device, but must needs patch a hole to keep the winds away. The carpets of our forefathers once consisted of rushes, among which the dogs hunted for the bones that had been thrown upon the floor.

In England, one end of the hall was the kennel for the hounds, and above it the perch for hawks. In the reign of Queen Elizabeth, the host at tables used to hold the joint of beef with one hand and the carving knife with the other, transferring the meat to the plates of his guests with his fingers, as forks were not yet in use. Those who first adopted forks were much ridiculed. Some said that the Bible was opposed to it, and it was an insult to the Almighty to use a fork when he had given them fingers.

The art of making glass is of high antiquity, but it belonged to modern ingenuity to develop the value of the invention, and to apply it to a multitude of important and, in some cases, indispensable uses. Not many centuries ago, window glass was found only in the houses of the very rich; its use began in palaces. For a long time it was so scarce that at Alnwick Castle, in 1567, the glass was ordered to be taken out of the windows and laid up in safety when the lord was absent.

There was another luxury, so expensive that for more than two thousand years it remained completely above the reach of the poor, and none but the wealthy could indulge in its use. We mean cotton cloth. The material of which the cloth was made was both plenty and easily obtained, as is the case with glass; but the cost of manufacturing made it very dear. If a Grecian lady could awake from her sleep of two thousand years, her astonishment would be unbounded to see a simple country girl clothed with a calico dress, a muslin handkerchief and a colored shawl. Within the past one hundred years, machinery has been invented which has made printed cottons so perfect, so plenty, and so cheap, that the humble servant girl can wear a better calico gown than Cleopatra ever saw.

When the whole stock of a carpenter's tools was valued at one shilling, and consisted altogether of two broad axes, an adze, a square and a spoke-shave, we must expect to find rough work and none but rough dwelling houses; when there were no chimneys, and the fire was laid against the wall, with the smoke to issue out at the roof, the door, or the window, and the people slept on straw pallets, with a log of wood for a pillow, we naturally expect rough

manners, unwholesome food, and a great lack of tidiness. This was the condition of the English people in the reign of Edward III. Even the nobility went without chairs and tables, and sat upon the chests that contained their clothes.

The first saw-mill built in England was by a Dutchman, but the opposition of the men who worked by hand was so great that he had to pull it down. In 1767 another was erected, but a mob tore it down. So progress has everywhere had to overcome obstacles.

In 1390, some friars in Switzerland wished to build a wind-mill, to save the labor of grinding corn by hand, but a neighboring landlord, who had bought the country around forbade them, because, he said, he owned the winds. The bishop was appealed to, who said the winds belonged to the Church and could not be used.

A writer of good authority, speaking of the times of Henry VIII., says there is no doubt that the average duration of human life was, at that period, not one half as long as at the present day. The kings and nobility of a few centuries ago possessed their crowns and high-sounding titles, but there is not, in the United States, a prosperous mechanic, possessing a fair degree of refined taste and education, who would desire to exchange his manner of life and living for theirs, so far as the conveniences of life are concerned. Thus it is that art is ever at work, breaking down the barriers which stand between the rich and the poor, and bringing both classes more and more toward the common level—not by degrading the wealthy, but by exalting both classes to a higher standard of morality, refinement and education.

A LITERARY TREASURE.

B. and J. F. Meehan, booksellers, of London, found among the books purchased by them at a recent sale a work entitled "Prose di M. Pietro Bembo; Impressa in Venezia, 1525," nearly every page of which has numerous marginal notes in the autograph of Torquato Tasso. The text of the book itself has evidence of its having been most carefully studied by him. The numerous notes in the volume were made by Tasso at various periods between the years 1579, and 1586, when confined in the Hospital of S. Anna, Ferrara. Few men varied their handwriting at different periods of their lives more than Tasso, and in no other volume probably will be found that fact so remarkably illustrated as in the present. These notes are occasionally written in the large, coarse and straggling hand, similar to two undoubted manuscripts of Tasso's in the British Museum. Many of the earlier ones are more in the round Italian hand, while others, of a later period, are in a cursive style, similar to that used by the poet in his letter writing, of which, though a little smaller, the four verses on the reverse of the last leaf form a beautiful example. The volume is from the library of the late Sir William Tite, formerly M.P. for Bath, but was not sold with his collection. It was originally in the possession of Professor Rosini, Bishop of Pozzuolo, Naples, editor of Tasso's works.—*Bath Herald*.

An exhibition of jugs, mugs and other drinking vessels is now being held in Vienna. The objects exhibited are all of German manufacture, both old and new. A German journal grows sentimental over the meaning of the old German jug, and remarks that "no nation has such a true perception of the poetry of drink as the German, which finds in a mighty draught the best protection against the discomforts of life."

OLD BERKSHIRE MILLS

DALTON, MASS., U.S.A.

One party writes: "The two hundred RECORD BOOKS, for 83 of the 99 Counties, now on exhibition at the Iowa State Fair, at Des Moines; and all, but four (!) of them, made from your 'OLD BERKSHIRE MILLS LINEN LEDGER,' Medium, 40lb., make a splendid show."

[The above cut is a fac-simile of the wrapper used on the Linen Ledger Paper.]

We will pay for any book rejected on account of fault in the paper. Send for Samples, test them in comparison, and see that your books are made from paper thus water-marked.

L. PRANG & CO.'S

Christmas and New Year Cards

ANNOUNCEMENT.

WE hereby beg leave to announce to the trade the completion of our line of Christmas and New Year Cards for this season, for which our agents are now soliciting orders. The extent of our list, the originality, and especially the American character of our designs, together with the great care taken in their execution, will, we have no doubt, secure for our goods the popularity which they have enjoyed heretofore. The efforts we have made to secure the highest excellence, is attested by the names of some of the artists whose designs have been reproduced. We would only name Elihu Vedder, C. C. Coleman, Thomas Moran, Miss Rosina Emmett, Miss Dora Wheeler, Mrs. O. E. Whitney, W. H. Gibson, F. S. Church, R. G. Birch, &c. That a due regard has been paid for the quality of the literary matter, in connection with these designs, is shown by the fact that many of the designs are accompanied by original poems from writers of note, such as Mrs. Celia Thaxter and Mrs. Emily Shaw Forman.

The great increase of our manufacturing facilities, secured by additions to our building nearly doubling our floor space and by the adding of new machinery, will place us in a position to fill orders promptly. Still we would request dealers to place their orders as early as possible, so as to still further enable us to make timely preparation for prompt deliveries.

Our Cards will, as heretofore, be put up in envelopes containing twelve Cards, unless otherwise stated on our price lists.

We furnish envelopes without extra charge for all our Christmas and New Year Cards, for which the list price is \$1.80 per set, and over. Our silk-fringed Cards will no doubt be in great demand this season. We have made ample preparation to furnish these in time and have made arrangements with our manufacturers for the best quality of silk fringes. We would call special attention to the excellence of our fringed Cards and the novelties in colors and style of fringes we offer for this season.

A marked and attractive feature of our cards are the elegantly ornamented backs.

All our fringed Christmas and New Year Cards are furnished with envelopes and protectors, so as to insure safe transportation in the mails.

It will be impossible to embody our whole list in the space of the advertisement, and we will therefore merely give a general outline of the variety offered.

PRANG'S PRIZE CHRISTMAS CARDS. COMPETITION OF 1881.

These are the Cards selected by the judges in the second competition for four designs of Christmas Cards, for which we offered \$2,000 in prizes of \$1,000, \$500, \$300 and \$200 respectively. At the recommendation of the judges, Messrs. COLEMAN, LAFARGE, and WHITE, the prize for third best Card was increased to \$500. Mrs. CELIA THAXTER has written appropriate verses for each of the designs.

- 1st Prize Card (\$1,000), by Elihu Vedder. Size, $6\frac{1}{4} \times 9$ inches; price \$1 each. Same card with silk fringe, cord and tassels, price \$1.50 each.
 2d Prize Card (\$500), by Miss Dora Wheeler. Size, 7×9 inches; price 75c. each. Same card with silk fringe, cord and tassels, price \$1.25 each.
 3d Prize Card (\$300), by C. C. Coleman. Size, 7×9 inches; price 75c. each. Same card with silk fringe, cord and tassels, price \$1.25 each.
 4th Prize Card (\$200), by Miss Rosina Emmett. Size, $5\frac{1}{4} \times 9\frac{1}{4}$ inches; price 60c. each. Same card with silk fringe, cord and tassels, price \$1 each.

The Prize Cards can also be had mounted on heavy board with gilt beveled edges.

We beg to call attention also to the following publications for New Year and Christmas:

- "Goddess Fortune" New Year Card, by Elihu Vedder. Size, $6\frac{1}{4} \times 8\frac{3}{4}$ inches; price 75c. each. Same card with silk fringe, cord and tassels, price \$1.25 each.
 "Christmas Dove." Size, $7 \times 9\frac{1}{4}$. This card is in the same style as the success of the last Easter season, the "Easter Dove" Price 60c. each. Same card with silk fringe, cord and tassels, price \$1 each.

Our Regular Line of Christmas Cards consists, among others, of the following Series:

- | | |
|--|--|
| <p>Nos. 901, 902, 903, 906, 909, 910. Floral designs ranging in price from 20c. to \$1.30 per set of 12.
 Nos. 904, 905. Humorous Cat and Frog Designs, 60c. per set.
 No. 907 is a new series of Horseshoe designs, 75c. per set.</p> | <p>Nos. 920 and 929. Children's designs, at \$2.40 and \$3.00 per set.
 No. 922. Shells of Ocean, with figures, \$2.40 per set.
 No. 924. Fans with silk fringes, \$3 per set.
 No. 933. Bric-à-Brac designs, very rich, \$6 per set, and many others.</p> |
|--|--|

We offer a similar assortment of New Year Cards, but would call special attention to No. 1330, a new folding calendar, at \$2.40 per set. Most of the Numbers can be had with silk fringes ranging in price from \$2.25 to \$12 per set. Stock will be ready for delivery September 15.

Besides the above, attention is called to our New Birthday Cards, Scripture Texts Cards, New Panels, New Water Colors, by Thomas Moran, and other publications. Our line of Thanksgiving Day Cards will also be shown by our agents.

[We will be glad to receive samples of all novelties issued in the trade, and will notice all such which possess merit free of charge. It is desirable to accompany descriptions with cuts whenever possible.]

PRINTER'S CURVING MACHINE.

The drawing illustrates a new Printer's Curving Machine, which is said to be really the only one in the market that will rapidly, and mathematically bend brass rules or leads into circles, ovals, or single or serpentine curves of any desired size; it will also straighten out old or crooked pieces of rules or leads so that they can be used indefinitely. Every practical printer is aware of the difficulty of bending brass rules to perfect curves, and of the great loss of material rendered necessary on account of the inefficiency of mechanical appliances for that purpose. The difficulty is now removed, and material and time can be saved. Any person can properly use this machine. In using this machine, the article to be shaped is placed between the jaws of the two small and the large bending cylinders, the lever on the left-hand side of the machine is then screwed up, so that the two small cylinders will press the metal to be shaped moderately tight against the large cylinder; this done, the handle is turned from and to the operator, and the curve is made. Any degree of curve, circle or oval, is obtained by raising or lowering the small cylinders, by means of the screw to the left of the machine. To take out or put in circles or serpentine curves, ease up the impression, screw and push out to the left the upright support of top cylinder on this side of the machine. After doing so, place the upright in position as before.

The construction of the machine is very simple, solid and powerful, and almost impossible to get out of order. The left-hand upright, which supports the top curving cylinder, can be slid out from its place so as to allow circles, &c., to be taken out without injuring their completeness. The degree of curve desired—whether plain or serpentine—is constantly at the will of the operator. Kelly & Bartholomew are the agents.

NEW PATENTS.

No. 245,656. Tricycle.—Wm. S. Reed and Homer N. Parker, Leominster, Mass., assignor to the W. S. Reed Toy Company, same place.

No. 245,670. Letter File.—Isaac Stoner, Lancaster, Pa.

No. 245,671. Toy.—George Stout and Alexander C. Stout, Boston, Mass.

A toy composed of a front piece furnished with an aperture, backed with a plate or other object, the latter held down by the latch arrangement described and raised by a spring, in combination with a projectile attached to the rest of the device by an elastic spring.

No. 245,702. Toy Locomotive and Cars.—Francis W. Carpenter, Harrison, N. Y.

No. 245,722. Easel.—James M. Hoover, Homestead, Pa.

No. 245,726. School Slate.—Albert Kachler, New Haven, Conn.

A slate having its frame or edge constructed with a series of notches, combined with a T-square provided with a stud or projection to engage the notches.

No. 245,748. Pocket Book Frame.—Charles Scherer, Brooklyn, N. Y., and Alfred G. Williams, Newark, N. J., assignors to Morris Rubens, New York, N. Y.

PRINTER'S CURVING MACHINE.

A pocket book frame consisting of two hinged or pivoted jaws, the one jaw provided with a guard plate and a rigid barrel of the

MOUNT VERNON.

same length as the jaws, the others provided with the spring clasp, which is adapted to be passed over the barrel and lock the jaws.

FEUDAL CASTLE.

No. 245,757. Segmental Maps and Atlas.—Theodore S. West, Alexandria, Va.

An atlas consisting of interposed maps and upper and lower covers, each map and cover in the form of a segment of a hollow sphere and of such size that its convexity will just fit into

the concavity of the map or cover next above, and its concavity will just fit over the convexity of the cover or map next below.

No. 245,787. Coin Holder.—Jno. Cantrell, Bridgeport, Conn.

No. 245,796. Printing Machine.—Forbes B. Dodge, Worcester, Mass.

The bed is horizontally reciprocated, and is geared with the impression cylinder during its forward movement. At the end of the impression the bed is lowered from the cylinder by the lowering of the ways (by means of a cam shaft) on which the bed reciprocates, and the return movement is made in this lower position. The cylinder is arrested by a stop lever at the end of the impression and so held until the parts are again thrown into gear for the next forward movement by the ways' being raised by the cam shaft.

No. 245,851. Photographic Printing Frame.—Elias P. Masterson, Port Jervis, N. Y.

No. 245,859. Machinery for Cutting Cards.—James Nuttall, Heap Bridge, near Bury, county of Lancaster, England. (No model.) Patented in England, May 4, 1880.

In machines for cutting cards, the combination of a reciprocating head carrying the punches and selecting needles, a traversing head carrying the pattern cards and blanks, and mechanism for giving an intermittent movement to the traversing head.

No. 245,861. Gauge for Boring Holes for Spindles in Toy Carriages.—Frederick W. Porter, Springfield, Vt.

The different steps in the gauge determine the angles of the holes for the spindles.

DESIGNS.

No. 12,410. Hammock End Ring.—Thomas Tresilian, Gloucester, Mass., assignor to the Union Webb Hammock Company, same place. Term of patent, 3½ years.

DESIGNS.

MOUNT VERNON.

Among the novelties brought out this season by Milton Bradley & Co. is a model of Mount Vernon, the home of Washington. The shell of the mansion forms the case in packing, while the piazza, cupola, out-buildings, people, animals, trees, &c., &c., are packed inside. It is a pleasing toy aside from its value as a model of the place so dear to every American. The toy is illustrated in the engraving.

DESIGNS.

FEUDAL CASTLE.

The "Feudal Castle" represented in the cut is one of the novelties just issued by Milton Bradley & Co. It is very easily set up and makes a fine show, while the whole packs in one of the towers, making a very convenient and compact package for shipment and handling. The decorations of the tower, as well as the label on the cover, are in chromo-lithography. It is said to be received with great favor, and it promises to be a leader for this season.

Titles of honor, conferred on such as have no personal merit, are at best but the royal stamp set upon base metal.

THE ACME STATIONERY AND PAPER CO.,

No. 117 Fulton and 52 Ann Street, New York,

—MANUFACTURERS FOR THE TRADE OF—

No. 144—7 x 8½ in., Bath Letter.
No. 145—8 x 10 in., Congress Letter.

The above cuts show our new method of putting up *Fine White Writing and Linen Papers*, for general use, in *Portfolio Style*, with a sheet of the best Blotting Paper attached to the cover as represented, making it the BEST and MOST CONVENIENT form for writing tablet in the market, which will only need to be seen to be appreciated.

TOURISTS' TABLETS.

This is a line of *Fine White Writing Paper*, handsomely bound in Tablets, with flexible covers to keep the paper compact and prevent it from being soiled. They will be found very convenient for the use of travelers and others where a less expensive tablet than our "Portfolio" is desired. The covers are printed with a neat design, making them a very attractive as well as convenient article for general use. They are put up in packages with ten tablets of eighty sheets each, of the following Nos. and Sizes:

No. 121.—Commercial Note. No. 122.—Packet Note. No. 123.—Congress Letter.

The J. W. Stoakes Automatic Shading PEN.

FOR PLAIN, FANCY AND ORNAMENTAL LETTERING.

WASHINGTON, D. C., March, 1880.

I desire to say that the "Shading Pen" invented by Mr. STOAKES meets a want long felt by penmen. The work done by it is perfect in line and shade. The rapidity with which lettering is done, aside from the beauty of the work, is enough to recommend it for general use.

H. A. WHITNEY, Ass't Cashier, U. S. Treasury.

U. S. ENGINEER'S OFFICE, St. Louis, Mo., }
February 11, 1880. }

I have tried the PEN, and it gives great satisfaction. It is worth twice the price asked. It is valuable for headings, etc.

A FIRST-CLASS Book and Stationery Business FOR SALE.

THE largest Book and Stationery business in a City in Pennsylvania that has a population of forty-five thousand inhabitants, is situated in the midst of a rich mineral and agricultural district, is a large manufacturing city, also a great railroad centre (there being seven different railroads running into the city and another road being surveyed), but four hours' ride from New York and two hours from Philadelphia, is offered for sale at a bargain on account of ill health.

It is centrally located in the best business square in the city, and has been established for more than thirty years—the stock of goods is fresh and clean,—and doing a large wholesale and retail business. The business for the year 1880 amounted to \$20,000.

This is a splendid opening for any person wishing to engage in the above-named business, and will bear a thorough investigation.

For particulars address W. A. R., care of American Stationer, 74 Duane St., New York City, N. Y.

Trade Gossip.

All new goods and designs which are not, strictly speaking, "Novelties" will be noticed under this head. The trade are requested to forward descriptions with samples in order to secure proper notice.

W. E. Wells, newsdealer, Seward, Neb., has sold out.

J. H. Allen, dealer in periodicals, &c., Providence, R. I., is dead.

A 32 inch self-clamping paper cutter is offered for sale. Apply at this office.

Prentiss Chaffee, paper manufacturer, Lee, Mass., has sold out to John Veran.

O. F. Clapp, newsdealer and stationer, Black River Falls, Wis., has made an assignment.

William Frysinger, printer and publisher, Brownstown, Ind., has sold out to J. B. Ferris.

Mehl, Wallace & Co., Erie, Pa., have dissolved partnership. Wallace, Walker & Co. succeed.

Duffy, Cashman & Co., printers, Boston, Mass., have dissolved partnership. John Cashman continues under the old style.

A. Crusius, with Victor E. Mauger & Petrie, has entirely recovered from his late illness, and is again at work looking hale and hearty.

A Chicago firm wants a good stationer or blank-book maker to join in extending its business. See advertisement in another column.

E. E. Huber, with Eberhard Faber, returned this week from the White Mountains, N. H., where he had been rusticated for three weeks.

Fowler, Miller & Co., printers, Hartford, Conn., have dissolved partnership. The Fowler & Miller Company succeed with authorized capital of \$20,000.

In the next issue of THE STATIONER will appear a description of some of the novelties which McCarty & Hasberg have imported for the fall and holiday trade.

The competition among the fancy note paper men is said to be very strong, and the several houses engaged in this line are doing their utmost endeavors to see who will produce the handsomest goods.

An advertisement of McLoughlin Brothers, relating to a new line of cheap big picture toy books, which was to appear in this issue, was not ready as THE STATIONER went to press. The trade are invited to look out for it next month, as it may be their interest to do so.

Henry Levy & Son, 477 Broadway, have just received seventy-five cases of photographic albums, comprising all of the latest improvements for inserting and taking out pictures. They are bound in Russia, Morocco, calf, and silk plush, and in fact many other styles. Some are beautifully decorated on the covers, and have elegant triangle and spring clasps. The prices are said to be very low.

McLoughlin Brothers have just published a new style of conversation cards, called the "New Comic." They are neatly designed and printed in silhouette. These cards are among the oldest and most popular of amusements. Originally intended for people of small conversational powers, they are now used by pleasure-seekers of all classes. The variety of conversations resulting from a single pack is immense. To bashful people they are a great blessing, not only furnishing an hour's amusement, but sometimes leading them to the gates of matrimony.

The immediate acquaintances and well wishers of Clarence A. Clayton, junior partner of C. H. Clayton & Co., are very deeply interested in an important enterprise he is about to embark in. They say that the preparations he is making for it are very ample, as he performs in less time more than twice his usual amount of labor in the store, leaves at the same time each afternoon, and makes the time of "Goldsmith Maid" to catch a Long Island train that starts at a certain hour. One of his most particular friends, who studies his everyday movements, intimates that the approaching crisis is not far off, if the ardor with which Mr. Clayton is endeavoring to bring events to an issue is any criterion. There is no doubt but that Mr. Clayton will be successful in his undertaking, as he is a very prepossessing, talented and genial gentleman, and one who always makes friends of his acquaintances. Further notice will be given of the new enterprise in a future issue of THE STATIONER.

No stationer's stock is complete nowadays without a taking assortment of leather fancy goods. The hold these goods have upon the masses is not to be wondered at. They are serviceable and pretty and admit of handsome decoration. What prettier present is there for a lady than a jewel box, glove and handkerchief set or an odor case, or one of those *multum in parvo* boxes for odor, gloves, handkerchiefs and jewels, with secret spring drawer? Or for a gentleman, a cigar stand, game box, collar and cuff set, and liquor case. Jas. D. Whitmore & Co., 45 Beekman street, have brought the manufacture of these goods in this country to perfection. They are superior to foreign made goods of like character, and have quite driven them out of the market. Buyers, when in New York, should pay their warerrooms a visit and be convinced.

The new fancy articles in plush shown by Jas. D. Whitmore & Co. this year are worthy of praise and should be in the stock of all enterprising houses. Buyers should lose no time in placing their orders for what they will need of these goods, as the firm's books teem with orders, and late applicants may be disappointed in securing what they want.

Eberhard Faber's line of steel erasers, which is meeting with great success, has just been increased by the addition of a knife eraser with rubber handle, which now completes the entire line. The firm claims the goods equal to those of Rodgers and offers them at a lower price. They are made of the best Sheffield steel and are finished in first-class style.

A congress of German and Austrian bookbinders was held at Leipsic from the 14th to the 16th of August. An exhibition of machinery and raw materials used by bookbinders and of antique and modern specimens of the art was also held at the same time.

K. F. Heinzer, of L. Prang & Co., has been in New York this week looking for novelties, and has just returned to Boston. He is now hard at work on the new line of valentines for 1882 and promises an unusually fine display.

Geo. Rice, publisher of the *Semi-Tropic California*, Los Angeles, Cal., has admitted Charles Coleman, Jr., to partnership.

The Kentucky Paper Bag Company, Louisville, Ky., has been incorporated with authorized capital of \$50,000.

W. H. McNery & Co., stationers, Leadville, Col., have made an assignment.

John T. Randall, dealer in fancy goods, Canandaigua, N. Y., has sold out.

A. Kneule, publisher of the *Bauern Freund und Democrat*, Pennsylvania, Pa., has sold out.

J. C. Swash, publisher of the *Times*, Waitsburg, W. T., has sold out.

Wm. H. Oliver, dealer in fancy goods, New York city, has made an assignment.

J. A. Smith, printer, Toronto, Ont., Can., is advertised to be sold out by the sheriff.

Julius Joseph has succeeded J. Joseph & Brother, dealers in notions, Clyde, Ohio.

John W. Craft, of the firm of Craft & Bingham, paper dealers, New York city, is dead.

The Western News Union, printers, Omaha, Neb., has been burned out.

H. E. Warren, paper manufacturer, Westfield, Mass., is advertising to close out.

R. R. West, publisher of *Every Saturday*, Georgetown, Ky., has sold out to Finnell & Garrison.

Taylor & Harvey, paper manufacturers, North Wayne, Me., have had their paper mill damaged by fire.

During the past week A. J. Santer, Clinton, Ia., and J. C. Skeen, of Skeen & Stuart, Chicago, have been in town.

A. S. McDade, of Boorum & Pease, has just returned home from a Southern trip, and reports good prospects for business.

The traveling salesmen of Henry Levy & Son have started on their fall trip, carrying with them a large line of staple and fancy goods. Friends of the house would do well to see this line before placing orders.

Among the visiting members of the trade to the city during the week were H. Henschberg, Memphis, Tenn.; William C. Taber, Jr., of Charles Taber & Co., New Bedford, Mass., and Mr. Burkitt, of Burkitt & Co., Keokuk, Iowa.

A return game of base ball will be played between the Duane street nine and the Beekman street nine on Saturday afternoon at the Union grounds, Brooklyn, at 3:30 o'clock prompt. The Duane street nine beat the Reade street nine on Saturday last by a score of 26 to 7.

Among other visiting members of the trade in the city during the week were Mr. Barnes, of Barnes & Hipsley, Fort Dodge, Iowa; Mr. Abbe, of the Holyoke Envelope Company; Charles Stewart, of Cincinnati; Mr. Grosvenor, of Grosvenor & Harger, Dubuque, Iowa; Mr. Williamson, of the Williamson-Stewart Company, St. Louis, Mo., and John Keith, of the Keith Paper Company, Turner's Falls, Mass.

A meeting of the creditors of Elliott, Jones & Co., Columbus, Ohio, was held last Friday at the Stationers' Board of Trade. The statement of the firm showed liabilities of about \$3,800 and assets at a valuation of about \$12,000. It had asked for an extension of four months, but, owing to the small attendance of the creditors, nothing definite was settled upon. It is probable that the extension asked for will be granted.

Max Griebel, of L. Prang & Co., has just returned from headquarters, where he has spent a week looking over the novelties. He reports the new factory building finished and the new machinery at work. The force of workmen has been largely increased, and the facilities of the house for turning out work are now more than doubled. Fringes are still in immense demand, so much so that the house now uses up about 5,000 yards a day. The new goods are well under way, and it is promised that the house will be able to fill all first orders in September in full, if so desired, thus avoiding the annoyance of back orders. In spite of the additional processes and the increase of force, night work must

unavoidably begin next week to keep up with the immense orders.

J. B. Hough, dealer in fancy goods, Syracuse, N. Y., has made an assignment.

Wiggins & Young, publishers of the *Union*, Wellsville, Ohio, have dissolved partnership. Each continues.

Lewis & Moses, publishers of the *Statesman*, Marshall, Mich., have dissolved partnership. W. R. Lewis succeeds.

Hocking Valley Printing and Publishing Company, Athens, Ohio, has been incorporated, with authorized capital of \$10,000.

Parker & Norton, publishers of the *Herald*, Holyoke, Mass., have dissolved partnership. S. H. Parker succeeds.

Harroun & Bierstadt, lithographers, New York city, have dissolved partnership. Edward Bierstadt continues.

Augustine Young, fancy goods dealer, Lewiston, Me., has failed, and has compromised at twenty-five cents on the dollar.

The buyer wishing odd shapes in cards should see those lately issued by J. D. Whitmore & Co., together with their already extensive line combining all desirable shapes in visiting and business cards of all qualities and tints.

Appleton & Co., 294 Broadway, New York, are agents for Hildesheimer & Faulkner, of London. They are offering a variety of designs in holiday cards, some of which are quite novel. These goods compare favorably with other productions of a similar character, and the trade are invited to make an examination of them. It will not be time lost.

It is conceded by all that Jas. D. Whitmore & Co.'s fancy leather goods surpass all of their former displays. They have the fullest line of game and card boxes, work boxes, jewel and combination boxes yet shown. Some of their designs are quite unique and all are very handsome, so that one is bothered to make choice.

J. F. Murch, agent of the J. O. Smith Manufacturing Company, has just returned from a trip to the Thousand Islands of the St. Lawrence. Mr. Murch indulged in fishing on this trip and caught a fifteen-pound muskallonge, which created much excitement, being the only one caught since July 4. Next!

Ralph Trautmann, 312 Broadway, New York, has just published two sets of fine steel engraved portraits, twenty in a set. One series comprises the Presidents of the United States, and the other eminent prose writers and poets. These engravings are cabinet size, on ivory-finished cards, with gold beveled edges, each set being inclosed in a neat leather case. They ought to be very taking goods.

One of the most novel things in the trade is a card wherewith a traveling salesman heralds his coming and begs off from competition. It reads: "By this card you will see that I have a line of fine papers, papeteries, &c., with me, and would respectfully ask you if other travelers, notably —, should reach you before I do, not to forget to reserve part of your orders for me."

Among the visiting members of the trade in the city during the past week were: James Buckley, Augusta, Ga.; Mr. Hornthal, of Hornthal Brothers, Plymouth, N. C.; Mr. Van Auken, of Swart & Van Auken, Schenectady, N. Y.; W. J. Sell, Erie, Pa.; Mr. Gassenheimer, of Gassenheimer Brothers, Montgomery and Opelika, Ala.; Mr. Dickinson, Kansas City, Mo., and Mr. Slasson, of E. A. Lewis & Co., Bridgeport, Conn.

with collections costing \$25, \$50, \$100, \$200, \$300 and \$500;

less trade discounts. Correspondence solicited.

NEW YORK OFFICE AND SALESROOM, 18 MURRAY STREET.

THE BAY STATE PAPER COMPANY,

HOLYOKE, MASS., were among the pioneers in the W. C. Paper trade, and their goods, from the start, were

distinguished for their fine quality and the superior style in which they were wrapped. Their example has been approved and imitated by a swarm of competitors, who have flooded the market with inferior goods, put up in packages of 600 to 800 sheets, misleading the unwary, and sold at apparently lower figures; but the trade and consumers generally recognize the fact that a good article, honestly put up, in 1,000 sheet packages, is the most profitable both for use and for sale. Their goods are all guaranteed 1,000 sheets to package, and no short count. No wood is used in any of these papers, but they are made of the very best stock in the market.

THE "MEDICATED BOUDOIR" BRAND

Has no equal for weight, strength, softness, and color, and commands the front place with "fine retail trade." Present reduced quotations furnished on application.

The attention of the trade is directed to our Fine Manilla Writing Papers and Copying Books. A comparison in price and quality with other goods will convince any purchaser that it will pay to buy of us. Samples and prices on application.

The Manuscript Library of Corpus Christi College, Cambridge, has recently received two notable additions in (1) folio volume on vellum of the eleventh century, containing a manuscript of the Vulgate (Genesis xxxiv. 10—4 Rev. xviii. 27), the very copy which has been classed by Vercellone as Codex U; and (2) a small volume 3½ inches by 5½ inches containing extracts from Gregory of Nyssa, Dionysius of Alexandria, and other contemporary writers, copied out in the twelfth century. The binding appears to indicate that the volume was once in the Imperial Library at Constantinople.

The *Archiv der Pharmacie* gives the following formula for making paper for wrapping up silver:—Six parts of caustic soda are dissolved in water until the hydrometer marks 20° Beaume. To the solution add four parts of oxide of zinc, and boil until it is dissolved. Add sufficient water to bring the solution down to 10° Beaume. Paper or calico soaked in the solution and dried will effectually preserve the most highly polished silver articles from the tarnishing action of the sulphuretted hydrogen, which is contained in such notable quantities in the atmosphere of all large towns.

SPECIAL NOTICE.

Being anxious to introduce into America the well known cards of Hildesheimer & Faulkner, of London, we will send free by mail to any stationer 200 different samples of Christmas and New Year's cards (that will retail for at least \$25) on receipt of \$5 in postage stamps. APPLETON & CO., 294 Broadway, New York.

BUSINESS CHANCE.

Wanted a good Stationer, or Blankbook maker preferred, to join a firm established in Chicago, to extend the making and jobbing of Stationery, or will sell a good Stationery, Book and Wall Paper business in one of the best cities near Chicago; cash or equivalent required not less than \$3,000. Address, with full name and particulars, G. C., office of American Stationer.

DEVOTED TO THE INTERESTS OF THE

Stationery and Fancy Goods Trades.

WEEKLY--\$2.00 PER ANNUM.

Single Copies - - - 10 Cents.

NEW YORK, THURSDAY, AUGUST 25, 1881.

Advertisements cannot be received for insertion in the current week later than 12 m. on Wednesday. The charge for advertising is 25 cents a line, each insertion. Special terms for standing and displayed advertisements to be had on application.

This journal aims to be a medium of information for and a representative of the interests of every one connected with the stationery and fancy goods trades. It contains a full and trustworthy survey of the market for stationery in this country, in all cases giving the actual prices at which goods can be bought of importers and jobbers in this city, together with a detailed account of novelties in the trade, patents relating to stationery, and current items of interest. A review of foreign markets and accounts of movements abroad will also be furnished, and no pains will be spared to make THE STATIONER a thorough and complete exponent of the trade.

Subscription and postage for Great Britain, per annum..... 12s.

Any information our readers may wish to obtain shall be cheerfully given, and prompt replies will be made to all inquiries addressed to us on any subjects of interest to the trade.

Communications on all trade matters are earnestly solicited. Address

Subscribers to THE STATIONER can be supplied with the best cloth binder in the market. Deliverable at the publication office. Price, fifty cents.

Readers of this paper who avail themselves of the information obtained from its columns, by advertisement or otherwise, are requested to notify their correspondents of the source of their information.

TRADE continues good, but has not reached its height.

SOME feeling is apparent among manufacturers of paperies and fine stationery packages. This is said to be due to the action of one house which is cutting prices.

OUR Australian correspondent informs us that the only American court or pavilion at the Adelaide Exhibition will be that known as the Lockwood Press "Bay." It must not be supposed, however, that this will compel a very limited exhibit of American goods. On the contrary, this "bay" includes a very handsome proportion of space, and under the auspices of the Lockwood Press will include many different American exhibits of importance.

ENTERPRISE is not always laudable, for there is such a thing as questionable ambition and misdirected exertion. An incident of the trade, wherein a traveler tries to anticipate a competitor by warning the customers of the latter of his own approach is mentioned in another column. The circumstance is amusing, even if it is shabby. We don't advise anyone to imitate it, as in this case it must be a good card for the firm against which the competition is directed, and certainly ought to inure to its advantage.

BRITISH free trade principles are at last open to modification. Heretical as it may seem, the doctrine of protection has again taken root in Great Britain, and promises to grow vigorously notwithstanding the argument, sometimes only half hearted, which is made against it. But even now, strong as the movement on behalf of the alarmed British industries has become, there is a reluctance to plainly admit the true meaning and intended force of the reactionary measures which are proposed. Fair trade is the name given to the proposition for tariffs based upon the mutual plan of "You tickle me, and I'll tickle you"—the one who is tickled the most presumably getting the best of it. When it actually comes down to the level of preparing an equitable basis for commercial intercourse between states it is ridiculous to suppose that one will not fare better than another and derive advantages which can only be gained at the other's expense. But, excited as the United Kingdom is getting over this subject of international trade, the United States are not concerned in it. It may be that an effort will be made to punish this country in reprisal for its principle of self-protection; but nothing can stay our industrial progress, and we will continue to produce and manufacture what other nations want. We would do better in some respects if British duties were imposed upon our goods. We could then put to one side and possibly get rid of the middleman, who intervenes between us and the consumers. We should be able to sell direct and renounce the system of sending everything,

or almost everything, through intermediaries who derive the chief share of the profits. It may not suggest itself to those whose feelings are most wrought upon by American competition that we are not a people disposed to submit to bullying or dictation. We are patient and kindly in our disposition and profound believers in the virtues of amity and peace; but we "won't be put upon;" and if those who feel inclined to test this point are uncertain or disposed to question as to our temperament or ability when the issue is to be met, we refer them to history. We don't care to make any strong allusions to past experience, preferring to let our friends ruminate over it. If Great Britain thinks she can profit by protection, she has every right to try it, and we shall be the last to find fault or object to her conserving her own interests; but it must be remembered that it will not do to adopt measures conceived and wrought in bitterness and so shaped as to threaten and drag this country into conformity with opinions which it is not prepared to voluntarily entertain.

ANSWERS TO CORRESPONDENTS.

W. H. who asked last week for address of house making travelers' expense books, is informed further that Wm. A. Davis, Boston, also makes them.

T. S. B. & Co. send sample of paper, and want to know who makes it.

Ans.—We are not sure that we know; but perhaps Crane Brothers, Westfield, Mass., or the Carson & Brown Company, Dalton, Mass., can enlighten you.

J. C. B. sends samples of paper and wants to buy in three-ton lots at first hands, for cash.

Ans.—The Seymour Paper Company and Vernon Brothers & Co. make such paper.

The application of reptiles on pottery is unlimited as to the number of differently shaped vases, and also as to the position of the reptiles, but very restricted as regards variety of animals, the whole of the living, and even of the mythical class of reptiles, consisting only of snakes, lizards, crocodiles, tortoises and dragons, from which the tortoises must be exempted as unfit for the purpose in question. Reptiles have been applied for decorating pottery by several of the Eastern people, who have cultivated pottery as an art; and we meet occasionally, amongst Chinese, Japanese, and particularly Indian wares, with some fine specimens of china ornamented with dragons.

The Steam Power Company in Elm street, near Duane, in which Boorum & Pease are largely interested, and which has been engaged for some time past in supplying power to quite a number of printing establishments, manufacturing stationers and others in its vicinity, has just completed putting in a new and very powerful Corliss engine of about 300 horse-power and a new boiler at a cost of about \$10,000. These improvements will give the concern the amplest facilities for furnishing power.

Aikin, Lambert & Co. are making extensive preparations for the fall campaign. Many of their customers from all sections, but principally from the South, are now in town.

SAFETY PAPER FOR CHECKS.

A new process of making safety paper is thus described in the *Chemical Review*:

A mixture is made of the sulphuret of zinc (zinc sulphide) and the carbonate of lead, both of which are white powders, insoluble in water. This mixture is either printed upon the check in any desired manner, or it may be incorporated with the paper pulp. If the check is filled up in the usual manner, with any kind of ink, the ground remains white, but if an attempt is made to efface the writing, either with an acid or an alkaline solution or a cyanide, the inventors suppose that a double decomposition will take place, and that instead of zinc sulphide and lead carbonate we shall have lead sulphide and zinc carbonate. But as lead sulphide (sulphuret of lead) is black, the check will, it is supposed, exhibit a blackish smudge or smear.

We have now to examine whether writing on the face of a check so prepared can or cannot be removed without occasioning a black stain; or whether such a stain, if produced, cannot be removed.

It is obvious that, unless these two questions can be answered in the negative, the invention, despite its ingenuity, is of little, if any, practical value.

Suppose we make a mixture of zinc sulphide and lead carbonate, and treat it with sulphuric acid, which is either very strong or very weak, the reaction takes place just as the patentees state, i. e., the black sulphide of lead is formed, and the paper is stained or darkened. But if an acid is used of a proper strength—it would be indiscreet to mention the exact proportions—there is no blackening at all, the product of the reaction being the sulphate of lead, which is perfectly white.

Again, if the mixture of zinc sulphide and lead carbonate is treated with the alkaline solution often used for discharging a certain class of writing inks there is, doubtless, a brown coloration produced. But if to the alkaline solution aforesaid there is added a proper proportion of the bicarbonate of soda, which does not in the least interfere with the discharge of the writing, there is no brown or blackening whatever, and the mixture of sulphide of zinc and carbonate of lead, and any paper with which it is incorporated, remains beautifully white.

We do not, be it understood, make these assertions upon mere theoretical grounds, or on the faith of what has been told us. We have witnessed a very elaborate series of experiments, the results of which we have just described.

COLORING DRAWINGS.

Use the best colors only; do not mix with too little water; if the first coat is not dark enough, wait till dry, and give another coat. Make up your mind what portion you are going to color before applying a drop of paint. Do not stop in the middle of a wash, but when once the brush touches the paper go straight through with the portion you begin. If obliged to leave the job for a minute paint up to a line, a dotted line will do if there is not a "full" one handy. This will hide the join between the two patches of color. Do not let your brush be too wet, nor yet too dry; a few trials will soon show you the right amount of color to take up. Use the best English drawing paper. If you then find any trouble, a little prepared ox gall mixed with the color will do wonders. Clouded drawings, as a rule, are caused by letting the work dry and going over the edges again when starting afresh. No piece of coloring should be left until finished.

AN ELECTRIC SONOMETER.

Professor James Blyth, whose name is well known in connection with microphonic experiments, has constructed a wire sonometer in which the bow ordinarily used to vibrate the wire is replaced by an electro-magnet. The apparatus consists of two bridges five feet apart, and having a wire stretched between. A current from eight or ten Grove cells, interrupted by a tuning fork vibrating 128 times per second, is sent through the wire. At a point, one-fifth of its length from one end, is placed an electro-magnet with pointed poles, so that the line joining the poles is at right angles to the wire. The poles are near the wire, but the latter is, nevertheless, left free to vibrate. When a current from eight Grove cells is sent through the coils of the electro-magnet the wire begins to sound, and by altering its tension the fundamental note of the wire comes clearly out. By shifting the electro-magnet and regulating the tension, the wire which vibrated as a whole before is seen to divide up into nodes and loops, giving the harmonies of the fundamental note. This effect is due to the interrupted current causing the wire to vibrate across the lines of force of the electro-magnet; in fact, the magnet acts like an ordinary bow. The effect, which is not confined to magnetic metals, helps to explain the action of Mr. Preece's wire telephone, and shows that it is due to transverse rather than to longitudinal vibrations; and it is obviously the same as that found by Professor Hughes in his researches on electrical torsion. By damping the wire at the proper points all the notes of the scale can be produced, and the tone is very clear and musical.

ACID FINISHING FOR BRASS.

Sometimes the lathe or vise finishing of brass is objectionable to the eye, and sometimes cast brass requires or admits of no such finish. The acid finish in such cases is very handsome and is readily obtained. In large manufactories of cast brass and sheet metal goods this method is extensively used, and sometimes the surface is further finished, or protected rather, by lacquer or varnish, but the acid finish is by many preferred. If the work to be operated upon is greasy the grease may be removed by heat, and then the piece should be cleaned with water slightly acidulated with nitric acid, or by soda water followed by clear water. It is then ready to be dipped in the finishing bath. This may be two parts nitric acid and one water; or in place of entire nitric acid there may be one part of sulphuric acid and sal ammoniac to two parts nitric acid. In either case, the acid must be very strong, as only a momentary immersion should be allowed; otherwise the metal may be eaten in pinholes. Experience is necessary here, as commercial acids are not of constant strength, and the brass composition is not always of the same exact proportions of metals. When taken from the bath the brass must be plunged into clear cold water, washed in hot water and dried in hot sawdust.

A NEW COPYING METHOD.—The pad is prepared with glue, glycerine and water, in the same manner as the well known hectograph, but with a larger proportion of glue. For writing or drawing, a concentrated solution of alum is used, colored with a little aniline to render the writing visible. Before using, the pad is dampened by means of a wet sponge, and the moisture is permitted to remain a few minutes. The writing may now be applied, and upon removing it, after a short time, the lines will be transferred

to the pad. A small quantity of printers' ink is applied with a rubber roller, and will be taken up by the etched lines only. An impression is obtained by pressing moistened paper over the lines with the palm of the hand. The pad must be inked for each copy, but a great number may be made from the same etching or transfer. This method is the invention of Adler, of the Vienna Photographic Society, and is not patented.—*Pharm. Centralhalle*, No. 49.

G. A. Raisbeck has just returned from a vacation, during which he enjoyed his usual sport, fishing and shooting. While out in a boat on a lake he saw a doe, and after emptying both barrels of his gun in it succeeded in bringing it ashore. It weighed 150 pounds. The hawk which Mr. Raisbeck caught with a landing net has arrived from Detroit nicely stuffed.

The attention of the trade is invited to an advertisement of Appleton & Co. in another column. It is in relation to Hildesheimer & Faulkner's Christmas and New Year and birthday cards, and is important, owing to the great competition in the card business this season.

Market Review.

OFFICE OF THE AMERICAN STATIONER, }
WEDNESDAY, AUGUST 24, 1881. }

THE MONEY MARKET.—Call loans have varied from 5 to 6 per cent. to a per diem bonus, in addition to the full legal rate. The rates for discount of prime commercial paper are up to 6@7 per cent. The advanced rates for money in connection with the demoralized condition of foreign exchange has had the effect to stimulate shipments of gold from London to New York, there being at present some five million sterling now on the way here. The stock market continues in an unsettled and feverish condition. Railroad bonds were dull and irregular. Government bonds were strong, and advanced $\frac{1}{2}$; but at the close the advance on the 4's and Extended 5's was lost. Several of the leading drawers of sterling reduced their posted rates to 4.81 $\frac{1}{2}$ and 4.84, others still keeping their nominal figures at 4.82 and 4.84 $\frac{1}{2}$. The actual rates for sixty-day bills are 4.80 $\frac{1}{2}$ @4.81; for demand, 4.83@4.83 $\frac{1}{2}$; for cables, 4.84@4.84 $\frac{1}{2}$; and for prime commercial, 4.78 $\frac{1}{2}$ @4.79 $\frac{1}{2}$.

THE PAPER MARKET.—The general condition of the trade remains substantially as last noted, nothing having occurred during the week under review to cause any material change. As regards values, taking into consideration the fact that most of the mills have been able to run their full capacity so far this summer without being hindered to any extent by drought, and that the production is very large, the demand has been such that prices have been unusually well sustained, straw wrappings alone showing any particular weakness. There seems to be a general indisposition among manufacturers to contract for any length of time ahead at current prices, so confident are they that higher prices will rule in the near future. The most conservative manufacturers predict an advance of $\frac{1}{4}$ ¢ in book and news before the close of this year, while others more sanguine over the future outlook expect to see 1¢ to 1 $\frac{1}{2}$ ¢ higher prices for these grades. Straw wrappings are quite dull and prices somewhat nominal.

THE STATIONERY MARKET.—Trade progresses very actively, and as compared with a week ago, it is thought by many, has received an additional impetus. Buyers continue to come in from all sections of the country, and our reporters find some of our city houses so fully engaged as to be unable to attract the attention of any of their representatives long enough to obtain information. The fancy goods men make a greater display than ever before in the various lines of goods which they handle. The competition in the fancy card trade is very great, and buyers have the advantage of an unusually large selection in consequence. The outlook for an unprecedented good fall trade continues favorable, and dealers as well as buyers all wear cheerful countenances, and speak of business in the most encouraging terms. Prices of staples have undergone no change.

In the last century the ink used in printing, whatever may have been its appearance when fresh, soon became faded and brown. It formed in this respect a marked contrast to the ink used by the fathers of printing in the sixteenth century. Fust, Schoefer, and the others, whose productions may be seen by the curious in many libraries, possessed an ink of a color which is said to excite the envy of modern printers. The color is deep and rich, and it has not turned brown nor rendered the adjacent paper dingy in any degree. The works of the Aldis and the Alzevirs, of Plantin and Caxton, are as deeply, darkly, beautifully black as on the day they were printed. How these old masters prepared their ink we do not know. The first and most important ingredient is the finest possible lamp-black. Vast buildings are appropriated to its manufacture. Oil, petroleum, naphtha, &c., are burnt, and the products of combustion collected from the sides and walls of buildings. The Bank of England, which relies upon the quality of its ink as a preventive against forgery, collects the carbon arising from the combustion of dried grape and raisin stalks. Other carbonaceous blacks reduced to powder are also often employed.

Professor Schliemann's Troy vases, mostly after originals in the South Kensington Museum, are now produced in a cheap decoration of black and white, and in more expensive forms. Among the excavations conducted by this famous German savant during 1870 to 1873, upon the hill of Hissarlik, the supposed ancient site of Troy, and which excavations brought to light over 100,000 articles from a depth up to fifty feet, is the supposed treasure of King Priam, of whom Homer sings, and a great variety of pottery, testifying to the great wealth, civilization, and taste for art in an age preceding the discovery of bronze. After the general supposition of antiquity (Iliad, xx., 215, 237), the Trojan war, ending with the final destruction of the city by fire, occurred about 1200 B. C.; so that at the lowest computation the objects excavated are over 3,000 years old. The variety of the pottery articles is very great, and their ground color ranges from black and deep red to yellowish and ashy gray; some have been highly polished, some bear incisions and inscriptions, the latter recognized as from the Phœnician alphabet, from which the Greek is derived.

PHILADELPHIA, PA.**ADVERTISING IN THE PRESENT AND IN THE PAST.**

It is still the custom, in some of the more isolated and remote villages of Mecklenburg and of Schleswig, for the parson after service on Sunday morning to give out from the pulpit notices which one would expect to find only in the advertising columns of newspapers, or on placards posted up at advertising stations. Thus, for instance, in these out-of-the-way places you may hear one Sunday that Karl Klaasen wishes next week to sell two pigs, and the next Sunday that Hans Hanssen wants to buy a donkey, or that the parish bull has been moved into a new paddock. Up to the end of the seventeenth century this or something similar was, in fact, the only or the most usual way of advertising. In towns where such notices were far more numerous than in villages, the common plan was to have them called out at certain hours of the day in front of the Town Hall. And this practice led to the employment of a town crier, who went to different parts of the town with his bell, and publicly proclaimed the news he had to circulate. In Germany the first paid announcements of private persons are generally supposed to have appeared in the *Oberpostamts Zeitung*, of Frankfort, which was started in the year 1615; while in London the *Weekly News* was the earliest to publish paid advertisements, that paper having commenced to appear in 1622. But the real father of newspaper advertisements was Theophrastus Renaudot, one of Louis XIV.'s physicians. In the year 1612 Renaudot received from the King the exclusive privilege of opening a "Bureau d'Adresses et de Rencontre," or office for addresses and interviews, where masters could engage servants, and employers and work people could have their wants satisfied. After a time Renaudot printed and published his list of persons seeking situations and masters seeking servants, etc., under the title of "*Feuille du Bureau d'Adresses*." The first number of this paper appeared on September 1, 1633. The example thus set soon spread to other countries, and we find paid advertisements appearing in a London paper in 1652; somewhat later in Hamburg and Vienna; but not till 1722 in Frankfort, 1727 in Berlin, and 1763 in Leipzig. Thus at first advertising papers were exclusively for advertisements; but subsequently the political and literary papers began to admit paid business notices. These in the first instance, however, only referred to books, literature, maps and printing. It was only gradually that the daily and weekly journals opened their columns to advertisements of any and every kind and character.—*British and Colonial Printer and Stationer.*

Mr. Thonroq, a Paris lithographer, has been very successful in substituting zinc for lithographic stones. By using 5,000 zinc matrices, worth 38,500 francs (\$7,700), he has avoided an expenditure of 250,000 francs (\$50,000) for stones; besides considerable saving in the cost of handling and manipulating. He has published in this way more than 350,000 copies for some of the leading French editors, the Polytechnic School, the Department of Bridges and Highways, the Ministry of Public Works and different municipalities. Each plate is good for 40,000 impressions, and the change seems desirable in all cases where large editions are to be worked off within a brief period.

We should manage our fortune as we do our health—enjoy it when good, be patient when it is bad, and never apply violent remedies except in an extreme necessity.

BRITISH FREE TRADE AND FAIR TRADE.

The gentlemen who have just associated themselves together as the "National Fair Trade League" may be deemed representative of the feelings which animate a very large section of the British public at the present time. Whether those who are now denouncing free trade as being a sham and an imposture are right or wrong we will not here inquire. It is sufficient for us to recognize the circumstance that there undoubtedly does exist a very widespread feeling of dissatisfaction, owing, as is alleged, to the inequalities which have grown up alongside the development of our modern fiscal system, and to the manner in which these inequalities have proved detrimental to British trade and industry. It does not appear to us that this new agitation is aimed at free trade pure and simple, but rather at the commercial treaties which have been hitherto looked upon as being part and parcel of the plans embodied by Mr. Cobden and his coadjutors. We are pleased to observe this distinction, seeing that there can be no question whatever as to the wisdom, policy, equity and justice of free trade between the different nations of the earth.

The promoters of the National Fair Trade League contend that the present system is a failure, and even worse than that, inasmuch as by its operation all kinds of foreign manufactures and food products are admitted free into the United Kingdom, notwithstanding the exclusion of British manufactures from foreign markets through the operation of more or less heavy tariffs. The promoters of the League say they are convinced that this refusal of foreign nations to receive British manufactures, "is working most injuriously to the welfare and prosperity of the nation, and endangering the steady employment, fair wages, and future well-being of our working classes." As a remedy for the present state of affairs it is urged that there should be no renewal of commercial treaties unless terminable at a year's notice; that all imports of raw materials for home industries should be free; that adequate import duties should be levied upon the manufactures of foreign states which refuse to receive our manufactures in fair exchange; a very moderate duty to be levied upon all articles of food from foreign countries, but these to be admitted free from such of the colonies as are prepared to take our manufactures in free interchange.

This is a comprehensive and revolutionary, so to speak, programme. It will be met boldly and earnestly by the Cobden Club and other free trade organizations, and will, if seriously meant, be fought inch by inch by those whose faith in free trade as it stands yet remains unswerving and unshaken. The £10,000 a year for five years, promised by Messrs. S. C. Lister, E. C. Healey, David MacIver, Sampson Lloyd, and other gentlemen, will be quite little enough. It is possible that the fair traders underrate the strength and vitality of their opponents. They must remember that it is their part to attack, and if they overthrow then they must be prepared with a substitute for the present system. On the other hand, it is not improbable that the free traders are inclined to underestimate the volume and extent of the new movement. If they do so they are extremely unwise, for there is abundant evidence as to the remarkable spread of this "fiscal heresy" of late. Many causes have contributed to this effect—some of them, no doubt, entirely and absolutely distinct from the main issues.

In any case, it appears pretty plain that the battle of free trade will have to be fought over again before long, and that we shall be required

to make up our minds and to give our votes in one or the other direction. It is not less certain that the fight will be keen and bitter in its main features and incidence, yet we may venture to hope for some profit in the sequence, even if their is little pleasure to be derived during the onslaught and defence. One thing is clear, and it is that the people of this country will require a remarkably sound series of arguments and a formidable array of facts and figures to induce them to desert a system under which so many of them are of opinion that they have prospered.—*Ironmonger, London.*

PAPER SIZES AND BOOK SIZES.

We need not fatigue our readers with antiquarian information concerning the shape of the books of the ancients, but the relationship of the books of the present day to the manuscripts of the Middle Ages is, however, worthy of consideration, for it throws light on the subsequent developments which have entirely separated, speaking mechanically, the new from the old books. In the production of a manuscript the scribes had their sheets of parchment and vellum all cut to the same size, then three or four were folded "quire wise," i. e., one inside another, the first section of each sheet being signed, so that the scribe in writing and the workman in binding them was in no fear of a transposition. These signatures were placed at the very bottom of the page, so that in binding they might be cut away.

The printers who succeeded the scribes adopted many other practices. They printed one page at a time; they at first actually signed in manuscript every sheet, of which several instances

may still be seen. The great Guttenberg Bible, which was sold at the Perkins sale is thus signed, as is a copy of "Les Recueils des Histoires de Troye," in the Royal Library at Windsor.

The signatures were afterwards printed at the bottom of the page next to the text. It is a great mistake to suppose that any books were issued without these signatures, either MS. or printed, and therefore the dates of the first use of signatures, as given by the bibliographers, mark nothing but the period when printed signatures superseded written ones.

The invention of paper brought in fixed sizes for books, and gave birth naturally to the divisions of folio, quarto, octavo and smaller. As time gave experience, it became possible to print many small pages at once, which by degrees developed a variety of signatures.

The real tests of all sizes of books before the year 1800 is the watermark and chain wires. The watermark is placed about the middle of one half of the sheet when folded, and the chain wires are the long perpendicular lines in the paper, which would perhaps be better recognized as "water lines." This is a firm foundation, because not standing on caprice; and, when understood is a true guide to size.

In folio, then, the water lines run down the page, in quarto across, in octavo down, and so on. This test any one may make for himself with a sheet of note paper, marked and folded. It is obvious, however, that these rules are inapplicable to books printed on "wove" paper.

These few rules, if borne in mind, will enable any one to state with precision, who can examine the papers, whether a book printed before 1800 is in folio, quarto, or octavo.—*Brit. and Col. Printer and Stationer.*

"THE GREAT ROCK ISLAND ROUTE"

Call your attention to the following REASONS WHY, if about to make a Journey to the GREAT WEST, you should travel over it:

As nearly absolute safety as is possible to be attained. Sure connections in UNION DEPOTS, at all important points. No change of cars between CHICAGO, KANSAS CITY, LEAVENWORTH, ATCHISON or COUNCIL BLUFFS. Quick journeys because carried on Fast Express Trains. Day cars that are not only artistically decorated, but furnished with seats that admit of ease and comfort. Sleeping cars that permit quiet rest in home-like beds. Dining cars that are used only for eating purposes, and in which the best of meals are served for the reasonable sum of seventy-five cents each. A journey that furnishes the finest views of the fertile farms and pretty cities of Illinois, Iowa and Missouri, and is afterwards remembered as one of the pleasant incidents of life. You arrive at destination rested, not weary; clean, not dirty; calm, not angry. In brief, you get the maximum of comfort at a minimum of cost.

That the unremitting care of the Chicago, Rock Island & Pacific Railway for the comfort of its patrons is appreciated, is attested by its constantly increasing business, and the fact that it is the favorite route with delegates and visitors to the great assemblages, political, religious, educational and benevolent, that assemble from time to time in the great cities of the United States, as well as tourists who seek the pleasant lines of travel while en route to behold the wonderful scenes of Colorado, the Yellowstone and Yosemite. To accommodate those who desire to visit Colorado for health, pleasure or business, in the most auspicious time of the year, the Summer season and months of September and October, the Company every year puts on sale, May 1st, at all coupon ticket offices in the United States and Canada, round trip tickets to

DENVER, COLORADO SPRINGS AND PUEBLO,

At reduced rates, good returning, until October 31st. Also to San Francisco, for parties of ten or more, good for ninety days, at great reduction from regular fares.

REMEMBER, this is the most direct route for all points WEST and SOUTHWEST. For further information, time-tables, maps or folders, call upon or address

R. R. CABLE,

Vice-President and Gen'l Man'gr, Chicago.

CAFFAGIOLLO WARE.

Cosmo I. established in a castle at Caffagiolo, situated between Florence and Bologna, a fabric of earthenware. The glaze is rich, even, and purely white; a very dark cobalt-blue of great intensity is used chiefly for grounds, and laid on with a coarse brush in apparent strokes. A bright yellow, a brilliant opaque, and unique orange not found elsewhere, a peculiar, semi-transparent, liquid copper-green, an opaque, bright, Indian red, also brown and purple are used. The Sienna wares are somewhat similar. Grotesques and a *candelieri* decoration are frequent. The drawing is bold and firm, and the figures frequently outlined with a narrow blue line. Florentine coats-of-arms, notably the Medici arms and mottoes, constantly occur, and the letters S. P. Q. F., for *Senatus Populusque Florentinus*. Among other coats-of-arms on Caffagiolo wares are those of the Rinuccini and Pazzi families; the arms of Leo X., with the motto *Sempe Glori*; those of Ferdinand I., Grand Duke of Tuscany, and Medici impaling Lorraine. The name of the place is written on the reverse in many ways, as Caffagiolo, Cafagiolo, Chaffagiolo, Chafaggiolo, Gafagiotto, &c. The name of the artist Benedetto Bocchi, of the period of 1640, appears on one piece, while the following artists are known to have worked there: Giacomo Ridolfi, Loys Ridolfi, Flaminio Fontana and Pietro da Cartona. The name Andrea di Bono, probably that of the owner, appears on a piece dated 1491. A monogram of P and S, or of those letters with an L, distinguishes many Caffagiolo pieces. The earlier pieces are enameled, some only on one face, with borders in antique style, and the drawing has something of the primitive aspect of fourteenth century woodcuts; the nimbus of the saints is exaggerated in size, the drapery is crinkled, and at first blue only is used. The fifteenth century shows progress, but not until the sixteenth century does the full harmony of varied colors appear. The family arms are colored in yellow for gold, tin enamel for silver, a rich red, and azure blue, as seen on pieces dated 1507 and 1509. A golden lustre with Medici arms and the P S monogram appears on one piece, and a few other lusted pieces are known, all of the sixteenth century, and subsequent to the first use of varied colors. Some pieces show great artistic merit. A dependent fabric seems to have existed at Galiano, for on a piece bearing the P S mark is the inscription *In Galiano nellano*, 1547. Some of the subjects on Caffagiolo pieces are as follows: The triumph of Justice; Hercules, accompanied by mounted knights, precedes a four-wheeled golden car drawn by youths, which supports a throne formed of dolphins, on which sits Justice; below the throne are two bearded, long-haired men, holding each a sceptre and a book. Cupid, blindfolded, bound to a column supported by four boy musicians, and a sphinx and harpy on either side; beneath lies the sea with dolphins and children. A Medusa head, with margin of three bombards discharging shells, and a shield of arms. A central shield of arms carried by three cupids, with side medallions representing grape gathering, treading and plowing, and a Medusa head. Alexander meeting Diogenes in the manner of Luca Signorelli. An equestrian figure spearing a dragon, of about 1510. Four soldiers conversing, in Italian costumes. A procession of a cavalier mounted on an elephant, followed by halberdiers, cardinals on mules, ecclesiastics, Pope Leo X. in a palanquin, pikemen and standard bearers, with the Medici arms on the standards. A triumphal procession, after Mantegna, with lictors, fasces,

a jes'er, musicians with harp and guitar, followed by horses harnessed. This dish formed one of a series representing the procession, dated 1514. Vulcan forging a wing for Cupid, in an Italian landscape. St. George, after the statue of Donatello. An infant falling head foremost from a tree. Apollo and Pan, a shepherd, a satyr, and two crowned monks. A celebrated plate of about 1520, representing a majolica painter painting the border of a *tondino* in the presence of two visitors; one of the visitors holds a cloth and a fruit, which appear to serve as a model for the artist's border. Two brushes and a separate cup are represented for each color.

The British Museum has purchased a collection of Biblical and other Oriental manuscripts, which are of the utmost importance to the criticism and exegesis of the Old Testament. The collection, which was made in South Arabia, consists of forty manuscripts. Fifteen of these are portions of the Hebrew Scriptures, and two are probably the oldest which have as yet come to light of the Old Testament Scriptures. A third, which contains the Hagiographa, exhibits a recension of the Hebrew text, the other two portions of which are already in the Museum, thus completing the whole Hebrew Bible. Several of these manuscripts have the Arabic translation of Suadijah, in alternate verses with the Hebrew, while others have the superlinary or Assyrian vowel points, which till comparatively recent times were unknown. The remaining twenty-five manuscripts are Midrashim, or homiletic commentaries and liturgies, which are more or less unknown.

The rearrangement of the city library at Mayence has just brought to light some literary treasures in the shape of valuable manuscripts and very rare printed books. Among these latter are two books printed by Gutenberg. One is a bull of Pope Pius II., addressed to the Cathedral Chapter of Mayence, concerning the deposition of the Archbishop Diether; the imprint bears the date 1461. The other, consisting of twenty leaves, is *Tractatus rationis et conscientie*, and is dated 1459. Both books are in good condition; they are printed with the same types as the *Catholicon*, but are neater and better defined. A copy of the *Catholicon* also is in the library. The bull is believed to be a unique copy, since no reference to another copy is to be found in any known catalogue; but there is another copy of the *Tractatus* in the National Library at Paris.

Red printing ink, according to the *Engineer*, may be made in this way: Boil linseed oil until smoke is given off. Set the oil then on fire, and let it burn until it can be drawn out into strings half an inch long. Add one pound of resin for each quart of oil, and one-half pound of dry, brown soap cut into slices. The soap must be put in cautiously, as the water in the soap causes a violent commotion. Lastly, the oil is ground with a pigment on a stone by means of a muller. Vermilion, red lead, carmine, Indian red, Venetian red, and the lakes are all suitable for printing inks.

"Quips and Quiddities," a work compiled by William Davenport Adams, will shortly be published in London. It is a selection from the compiler's commonplace book, and will consist of amusing tidbits from plays, novels, poems and essays, mainly English, with occasional incursions into French and German literature.

No. 23 MAIDEN LANE, NEW YORK.

STAFFORD'S UNIVERSAL WRITING INK!

A PERFECT BLACK WRITING FLUID.

It contains no gum, and flows very freely, making a smooth, even mark.

It positively will not corrode Steel Pens.

Writes darker than any known ink, and turns at once jet black.

Being a perfect chemical solution, it cannot thicken or deposit a sediment.

Never moulds in any climate. Freezing does not injure it.

Never changes in color or consistency while in use in the inkstand.

Resists Acids. Is more permanent than any other ink.

It will be found more economical than any other ink, as it can be used to the last drop.

One of the most valuable and remarkable features of this Ink is the extreme rapidity with which it dries on the paper, it being seldom necessary to use a blotter. This quality should recommend it to bookkeepers.

In the United States, this Ink has completely superseded the old fashioned pale black inks, and has to a great extent taken the place of the faint green writing fluids.

Mr. J. ADEE HEPWITH, the eminent English Chemist, says:

"I find S. S. Stafford's Universal Ink to be proof against all acids; and, from my knowledge of its ingredients, I believe it to be the most permanent ink in existence, as it cannot rust out like other inks that are prepared from galls and iron. As it seems to be entirely free from any tendency to thicken or corrode steel pens, and is **BLACK AT ONCE**, I cannot but regard its invention as a valuable discovery."

S. S. STAFFORD, Chemist, No. 218 PEARL STREET, NEW YORK.

FRANKFURT'S FIRST PRINTER AND PUBLISHER.

The ancient city of Frankfurt-on-the-Main has recently done honor to itself by honoring the memory of the printer who first set up a press in the city, once the capital of the German book trade.

On Sunday, the 26th of June, 1881, being the 350th anniversary of the introduction of the art of printing into the imperial city of Frankfurt by Christian Egenolff, the citizens celebrated the day by inaugurating a tablet to commemorate this event. This tablet is fixed in the wall of Egenolff's last place of business and the house where he died, No. 20 in the Grosser Kornmarkt, and it bears the following inscription:

"Here worked, after 1543, the first Frankfurt book printer, Christian Egenolff, born June 26, 1502; citizen December 27, 1530; died February 9, 1555."

The unveiling of the memorial took place in the presence of the municipal and trade corporations of Frankfurt and its vicinity and of a large number of printers.

Herr Dr. Grotefend, keeper of the city archives, is the author of an interesting biography of Egenolff, to which we are indebted for the subject matter of this notice.

As the name of Egenolff is not so well known here as it deserves to be, we extract from Dr. Grotefend's Memoir the following particulars concerning Frankfurt's first printer:

"Egenolff was born on the 26th July, 1502, at Hadamar, a small town in Nassau. Of his parentage nothing is known. When fourteen years old he was entered at the University of Mainz, where he studied the humanities. How long he studied at the university or resided in the city is unknown. We next hear of him, in 1529, at Strasbourg, where he was already established as a printer. Here he remained nearly two years and printed several books, the titles of about a dozen only of which have come down to us. The earliest known is 'Gerardi Noviomagi, Vita Philippi a Burgundia.' The last book printed in Strasbourg by him is a treatise on distilled waters, which has no author's name, but bears the date 'August, 1530.' On the 20th of the following month Egenolff applied to the Town Council of Frankfurt to be received as a citizen of the imperial city. The minutes of the day's proceedings of the Council contain the following note of this application: 'It is set forth that a book printer of Strasbourg asks to be admitted to the citizenship,' and the resolution is added: 'Let him be received; but let him bring a recommendatory letter, and promise to print nothing whatever without the supervision of an honorable counsellor.' On the 27th of December he was admitted a citizen of Frankfurt.

"Egenolff at once began business in a thorough-going, conscientious way, showing that he was equally enlightened and enterprising as publisher as printer. His first production in Frankfurt appeared in May, 1531, and bears the title 'Der Stab Jacobs, eine Anleitung zum Messen, vom Stadtschreiber Köbel zu Oppenheim entworfen.' In July of the same year he printed a copy of the famous 'Golden Bull,' besides executing several commissions received from the Town Council of Frankfurt.

"Although Egenolff was now an enterprising publisher, he still continued his printing business, at a period when book printers, growing weary of press restrictions and trade disputes, aspired to become publishers only, and left to others the dirty work ('sudderei'), as Frau Cratander, the wife of a contemporary printer of Basle, termed it, in not too elegant phraseology.

"As his business increased Egenolff found it necessary to secure larger premises, and signified to the Town Council his wish to purchase the house of one Johann Jeckel, and asked the Council to advance him money for this purpose. Whereupon the Council nominated a commission to visit the house and come to terms; and on the 12th June, 1533, it was decided to advance to Egenolff 400 gulden, of which sum he was to repay 25 gulden at every fair, i. e., 50 gulden yearly. He obtained possession on the 7th July by paying 550 gulden, from which it seems that he disbursed only 150 gulden in ready money. This house, which was in the Bleidenstrasse, has long since disappeared, and its situation cannot now be ascertained with any certainty.

"Soon after moving into his new house, Egenolff married Margarethe Kaerpfen, with whom he seems to have lived very happily, and by whom he had nine children. His affairs prospered, and he was able not only to pay off his debt to the Town Council, but also to accumulate an ample fortune. He opened a branch establishment at Marburg, which he subsequently disposed of, but only because of the great increase of business at Frankfurt, which obliged him to remove to a larger house, No. 20 Kornmarkt. This house he bought for 800 gulden, in September, 1542, and to it the memorial tablet just inaugurated is affixed.

"In his new abode he continued to prosper, and all contemporary records concur in showing that he deserved his good fortune. He appears to have been a man of a mild and gentle yet firm character. Doubtless, his university training stood him in good stead, but he lost no opportunity of acquiring information. He could express himself fluently in his own language and in Latin, and was his own reader and corrector for the press.

"Egenolff's extensive business necessarily brought him in contact with many prominent personages of his epoch, and with most of them he formed warm and lasting friendships. Among others was the celebrated Reformer Melancthon, who stood sponsor to one of Egenolff's sons, baptized May 18, 1540, with the name of Philip. Two of Melancthon's letters to Egenolff still exist; one relates to Melancthon's Grammar, the other is recommendatory of a book submitted to Egenolff for publication.

"Frankfurt's first printer enjoyed twelve years of uninterrupted prosperity, only marred by one or two disputes relative to copyright, where his rights had been infringed; but in these suits he always came off the conqueror.

"At last, on the 9th of February, 1555, Christian Egenolff was called to his rest, after a short but busy life of fifty-three years. He left behind him a widow and children, a flourishing business, and considerable property, both real and personal. As long as his widow lived, she managed to keep the business together; but it is said to learn that, although the children of the good printer arrived at man's estate, they seem never to have attained to years of discretion. After the death of their mother they were continually quarreling among themselves, and the profits of the business were dissipated in litigation, and so, after no very long time, the firm of Egenolff ceased to be."—*Bookseller*.

For rich, darkly colored Japanese vases, a holly or satin wood octagonal stand, with legs cut in imitation of bamboo, is appropriate. If the vase shows light and brilliant coloring, the same form of stand, ebonized and silvered, is effective. An octagonal or square stand, covered by velvet, and relieved by bronzed, silvered or gilt legs, would also be pretty.

CEMENTINE.

WE desire to call attention to a new article which we are just now introducing to the trade. It is a liquid glue, cement and mucilage combined. In our own business we experienced so much difficulty in finding an adhesive that would make our labels adhere to the tin cover of the Hektograph, that we gave a commission to one of our most distinguished chemists to compound for us an article which would answer our purpose. After months of labor the result has been the production of an adhesive so far superior to anything heretofore made, that we have decided to manufacture and offer it for sale, and are now ready to supply it in any quantity. It is without doubt the best article of the kind for family and general use ever offered to the public. For repairing China, Glassware, Furniture, Rubber, Leather, Books, Billiard Cues, or pasting labels upon tin or other metal or for any use where glue, cement or mucilage is required, it is unrivaled. For warm climates we make an article expressly adapted for use there. We supply it by the gallon or barrel, and for family use it is put up in bottles, with brush, at 25 cents. Samples will be sent free to large consumers.

LIBERAL DISCOUNT TO THE TRADE.

"EIDOGRAPHIE."

This is the name given to a process invented by Professor A. F. Eckhardt, a German chemist. Silken cushions, such as ladies have been accustomed to spend weeks in embroidering from designs in colored silk, are decorated elegantly by the pencil of the "eidographist" in a few hours, and the work is done in metal, which will not wear off, as the silk of embroidery does. Instead of the expensive stained glass windows used in churches, windows decorated by the "eidographic" process can be employed, producing similar effects, and at a comparatively nominal cost. Wooden ware can be embellished by the same process, as can paper, metal, ivory, leather, wire screens, and any solid surface. The designs being in solid metal, and the brilliant coloring a compound part of the metal, the decorative work is permanently fixed, and will last as long as the material upon which it is placed. The worker in "eidographie" is supplied with a number of pencils containing the metal which Professor Eckhardt has compounded, and the composition of which is his secret, in a fluid form. It is said that every known color can be produced. The moment the fluid meets the air, upon issuing from the pencil, it hardens, and becomes a metal, adhering so closely to the material upon which it is laid that it cannot be removed without breaking. One of the uses to which eidographie is capable of being applied is said to be the production of copper and steel plates for engraving. The design is first made by the new process, and a negative is then taken. The labor of engraving is thus saved.

It is in any one's power to be successful, if a man or woman is fit for work.

BYRON WESTON

DALTON, MASS., U. S. A.,

HAS BEEN AWARDED THE

GRAND PRIZE GOLD MEDAL

AND RECOMMENDED THE

Medal of Honor and Perfection
At PARIS, 1878,

This being the **HIGHEST** and **ONLY** AWARD given for

LINEN RECORD & LEDGER PAPER.

—A SPECIALTY.—

THIS Paper has received THE HIGHEST PREMIUM over all others from the Cincinnati Industrial Exhibition, Massachusetts Charitable Mechanics' Association, Franklin Institute of Philadelphia, Louisville Exposition, Medal and diploma from United States Centennial Commission, Medal of Progress American Institute, 1877, and Medal of Improvement and Progress, Boston, 1878. Its

PRINCIPAL ADVANTAGES

are as follows:—1. It contains more LINEN than any other Ledger Paper, has a longer fibre, and is, consequently, tougher. 2. Having a harder and better body, it frays less in erasure, so that by simply using the rubber after the eraser, the ink is prevented from spreading. 3. It is more uniform in Weight Color and Finish. 4. It never cockles if properly bound. 5. Its chemical action upon ink is such that it both writes and rules up better. For proof of the foregoing, refer to a large number of Stationers, Bookbinders, Bookkeepers, and Recorders, who have given it, after a severe test, the preference over all others. This paper is *Double Sized*, and will stand any climate or the most acid of fluid inks.

Each sheet is water-marked with name and date.

Send for sample sheet, ERASE and REWRITE FOUR TIMES on same spot.

CHICAGO NOTES.

[FROM OUR REGULAR CORRESPONDENT.]

WESTERN OFFICE LOCKWOOD PRESS, 18 LAKESIDE BUILDING, CHICAGO, ILL., August 27, 1881.

It is very probable that, had the many hopes and prayers in behalf of the President's life been answered by his recovery, business would everywhere have taken a wonderful impulse, and the tardiness in the same may be traced almost wholly to the dreadful uncertainty. Hope, at the present writing, seems vain; yet, there is not a heart in the entire Northwest that does not still cling to the hope that the life of our chief magistrate may be spared, as well for personal as public sympathies and interests.

Donohue & Hennebury have just issued a "Writing Speller," which follows the sequence of their Red Line series.

My friend, F. L. Montague, well and favorably known throughout the country in connection with the "Acme" paper cutters, sailed for Europe on the 20th, by the steamer Egypt of the National line. He goes in the interests of the "Acme." There is no one who has ever met the handsome and genial young man who will not wish him *bon voyage* and swift return.

A. J. Cox & Co., and Donnelly, Gassette & Lloyd, will each take a floor in George H. Taylor's building.

H. Z. Culver, of Culver, Page, Hoyne & Co., was recently made the unwilling hero of a rather unpleasant *rencontre*. While passing down Michigan avenue, near Twelfth street, about 10 P. M., some evenings ago, he was attacked by a gang of thugs, who, failing to frighten the plucky gentleman into "standing and delivering," attacked him with the handles of their revolvers. He made a good fight, and freed himself from the gang with no loss excepting some blood. The victor then made his way home, where, medical attendance being summoned, his wounds—severe, but not dangerous—were dressed. He is now entirely recovered.

S. Bingham's Son, 200-202 Clark street, has been awarded the contract for supplying the government printing office with roller composition. Mr. Bingham left for Washington last week.

Huke & Spencer have just issued a four-page circular giving a list of the machines and tools made by them. Their business includes tools for type foundries, electrotypers and stereotypers, printers and bookbinders, for which they have acquired an enviable reputation in the West.

Baird & Dillon, Lakeside Building, have re-

cently received a number of fresh importations in fine albums. All of these are of rich and beautiful design, varying in colors from gold and red to silver and black. An oak leaf design in silver is very neat. There is also a design of a spray of cherries, the fruit being worked in raw silk. A fuchsia bouquet is also tasteful; but the neatest of all, while scarcely so showy as the others, is a "diamond and pillar" design furnished by Mr. Baird himself and copied by the German manufacturers. Nothing could be more tasteful and chaste. A good idea in some of these goods is that of having the clasp covered with leather, and the corners rounded. This house claims that the large size of its importations enables it to sell as cheaply as any and to undersell most firms dealing in the same class of goods. Baird & Dillon handle no "trash," their cheapest stock selling at \$17.50 and from that up to \$65 and over per dozen. Their specialty is fine quarto goods. Stationers might do well to see both their Bibles and albums.

My old "chum," H. A. Taylor, Livermore's dashing Western agent, is off on a trip to Minneapolis and St. Paul, in the interests of the pen. In his own interests I believe he intends "taking in" a lake or two on the way, and, from his acknowledged personal resemblance to your humble correspondent, it may be well to say to the maidens of the Northwest "Beware!"

Chas. P. Willard reports his sales of printers' engines flattering as ever. One of the latest is a two horse-power "Acme," to Marsh & Co., for the Ludington Democrat, Ludington, Mich. These engines are claimed to be the cheapest and best made for the purpose.

Brown, Pettibone & Kelly are doing some club printing and engraving of which they have reason to be very proud. The work consists of concert and other programmes in various attractive styles. Those having work of this kind may find it to their advantage to address this firm.

S. S. Scott reports a recent sale of five dozen MacKinnon pens to Jansen, McClurg & Co.

I have heard indirectly that Geo. E. Marshall & Co. have applied for the Western agency of the Cross pen, with the sale of which they have hitherto been very successful.

Treleven is still busy making gold pens.

A recent advent in the Chicago trade is that of the "Novelty Card and Advertising Company," J. B. Clarke manager of Western office, 192 Clark street. The house intends carrying a very complete and varied list of advertising cards. It is probably destined for success.

G. B. H.

CINCINNATI NOTES.

[FROM OUR REGULAR CORRESPONDENT.]

CINCINNATI, O., August 29, 1881.

The outlook, if bad anywhere in the nation, would be earliest to show here in Cincinnati. The stationery trade, and in fact all branches of business in Cincinnati, have most profitable customers in Southern Illinois, where the consumers of our products have had their substance consumed. Southern Indiana, where the drought has been dreadful, is almost entirely tributary to Cincinnati for articles of luxury and necessity.

Kentucky, although a small sufferer in wheat and corn, suffers in damage to her leaf tobacco crop. Any one who knows that Cincinnati is the leading city in the world in dealing in leaf tobacco, knows what that means to Cincinnati trade. The tobacco in Ohio and Indiana suffers from drought. But there remains the consoling fact that it is not dead but in a state of suffering. The acreage is unusually large this year, and while continued drought would only have the effect to reduce the yield, a rain coming soon would improve the prospects very much.

There is another evil from the drought peculiar to this region. It is in the central blue grass region of the continent. Kentucky, by report, has that honor, and justly, but not exclusively. Indiana and southern Ohio are magnificent blue grass regions. These pastures have been scorched, and graziers are hurrying their stock to market. Those who can are buying corn and feeding; but there is a rush of live stock to the markets, as any one who watches the live stock centres will observe. But in these brown, burned fields there are the seeds of compensation. The root of the blue grass is about as tenacious of life as that of the Canada thistle, and it has two seasons of heyday thrift and glory; the first in the early spring, when it comes out starred with the gold of dandelions and the second is from mid-autumn to sometimes near Christmas, and not infrequently in Kentucky nearly all winter. The coming rain will bring this compensation, which will be utilized.

Outside of Southern Illinois and Southwestern Indiana the drought has not been alarming. Wheat has not been affected by it, and the fair crops of that cereal were never better gathered. The corn crop is only reduced in yield outside of the burned regions mentioned.

It is the impression of cool heads that the general injury has been exaggerated. There is no question but that it has been greatest in the lower part of the Ohio Valley, north of the river.

Trade here has not yet felt the effects of this local calamity. Dealers in clothing and in boots

and shoes experience the countermanding of orders from the regions most severely affected; but it does not seem yet to be felt by other lines of trade, although it is feared by some of them.

The field is large, and our stationers will find room beyond their accustomed territory, and will push out. The fears are not serious, and a few weeks ago those who feared expected to be hurt are this, and they have not felt the slightest impression of a hurt yet.

All of the paper mills are going, and find customers for all they can produce.

The manufacturers of finished goods were never more busy or more cheerful. Those who have forebodings do not feel alarmed, and would be disappointed rather than hurt if their worst fears should be realized.

W. B. Carpenter & Co. have added to their business the manufacture of envelopes, and are devoting themselves to making to order special lines and shapes. They report the largest sales of envelopes ever made in this region at this season of the year. As to sales abroad in their territory, they say they have been the largest they have ever made during the corresponding month. Their case in this is not exceptional. Other stationers report the same in their experience, and other lines of business make the same report.

The travelers are abroad—see this list of those who have been at Cincinnati within the last fortnight: R. L. Krauss, of Chase's Liquid Glue Company, Boston; Mr. Hayward, of Hasbrouck & Watson, New York; Frank Watkins, American Pencil Company, New York; S. E. Vernon, of S. E. & V. M. Vernon, New York; Mr. Stix, of Kaufman & Stix, New York.

Peter Thompson, of this city, will issue a line of illuminated toy books for children this fall difficult to surpass in brilliancy of coloring.

PRINCE WILLIAM.

OHIO NOTES.

[FROM OUR REGULAR CORRESPONDENT.]

DAYTON, O., August 29, 1881.

Your correspondent confesses himself at fault in regard to trade throughout this region. It was never so good, to his knowledge, and we have really only one-half a crop. With a full yield, New York could not have furnished the West with goods enough. Money is plenty—at least with the banks,—discount ruling at about 6 per cent. for commercial paper.

Commercial travelers are tolerably plenty—plenty enough, at any rate. Wright, of Phil. Hake's, was here, and showed a very handsome line of goods, and says that he has no complaint to make about orders. Watkins, of the American Lead Pencil Company, has also been with us, and shows a smiling face. "Orders did it." Latham, of the National Blank Book Company, was here a few days ago, and reported the demand good for blank books. The new lines of duck books are driving leather bound out of the market to a large extent.

I took a round among our stationers and found them all busy.

G. W. Holden reports it the best August he ever knew, and will be glad when it is over. C. E. Conover, in his employ, is worked to a shadow, and now only weighs 237 pounds.

H. E. Mead & Co. say that trade was never so good, or goods so hard to get.

Lou Reynolds, of Reynolds & Reynolds, says that they never had so good a trade.

R. A. Rogers, of R. A. Rogers & Co., says they have sold 75 per cent. more goods this August than in August last year.

You can form your own opinion as to what is

the cause; but deponent has no more theories to advance.

The Mead Paper Company is busily engaged in rebuilding its mill, and claim that, when it starts up, it will have the most complete mill in the West.

Russell, Morgan & Co., of Cincinnati, are starting a playing card factory. I believe that it is their policy not to cut the combination prices, but to make better goods for the same money. There is a good opening for their production in the West.

The long continued drought is being very sensibly felt by all paper mills through the valley, and their product is very largely decreased.

The demand for news paper this summer has been very heavy, on account of the great demand for news in regard to the condition of the President. We Ohio people are feeling better to-day, and hope our favorite son will pull through.

Ninety-six in the shade is about the average to-day throughout the MIAMI VALLEY.

VARIOUS OLD POTTERIES.

Milan, in the middle of the eighteenth century, produced faience in imitation of the Chinese style, somewhat like Delft and Dresden china, and frequently gilded. But pieces exist painted with bouquets in the style of the seventeenth century, textile fabrics, and inscribed "Milao." Others, with Watteau figures, are signed "Milano."

Savoy possessed a manufactory in 1564 under the government of Emmanuel Philbert. There is a piece covered with a thick and very white enamel inscribed "Fatta in Torino ad 12 de Setembre, 1577." Others bear the Sardinian cross and the crown of Victor Amadeus II., or Charles Emmanuel III., who succeeded to the throne in 1675 and 1730.

A manufactory existed in Genoa in the sixteenth century. Piccolpasso mentions the wares of Genoa ornamented like those of Venice. The latter pieces in the seventeenth century bear the mark of a lighthouse with hanging beacon.

A pottery existed in Savona in 1576, which took a large development in the seventeenth century; the wares have more a commercial character than of good art. The body of the Savona ware is thin and well fired, and the decoration usually in blue upon bluish-white, and the glaze is good. The principal mark is the shield of arms of the town, surmounted with a crown. Girolamo Salomini, about 1650, who signed G. S., and with the star of Solomon; Gian Antonio Guidobono, and his sons Bartolemo and Domenico; Gian Tomasso Tortoroli; Agostino Ratti, about 1720, and Jacques Borelly, in 1799, worked at Savona. At the present day Savona produces ordinary work in glazed and unglazed terracotta. Arbisola had a manufactory resembling mostly the latter Savona in character. There exists a picture of the nativity, on tiles, inscribed Arbisolo and signed Gerolamo, 1576, resembling the signature of Gerolamo d'Urbino.

The Marquis Campori shows that artists of Faenza carried their manufacture to Ferrara, beginning with a mention of painted and glazed pieces in 1448, and of one Melchior in 1495. Biago, of Faenza, is mentioned as being in the service of Alfonso I., Duke of Ferrara, in 1501 and 1506. In 1510, Pope Julius II. took from Alfonso I. part of his possessions; Alfonso, being obliged to retrench, sold his jewels and began using pottery vessels of his own manufacture. In 1522, Antonio, of Faenza, and in 1528 Cato, of Faenza, were in charge of the manufacture. About this time the artists Camillo, the Dossi,

and Baptiste are recorded. The brothers Dossi also decorated in fresco the palaces of Alfonso of Este, in the Raffaelsque manner. Besides the above manufactory subventioned by Alfonso I., his brother, Sigismund of Este, protected another fabric located in the Schifanoia Palace, under the direction of Biagio Biasini, of Faenza, mentioned in the archives from 1513 to 1524; the artists El Frate, Grosso and Zaffarino worked there in 1523.

In 1534 to 1559, during the reign of Hercules II., the archives only show Peter Paul Stanghi, of Faenza, as working there. On the accession of Alfonso II. a change in the style is noted from that of Faenza to the Urbino manner, and the names of Camillo, of Urbino, and his brother Batista, appear in the archives.

Alfonso I., about 1504, had caused laboratory experiments to be made, resulting in the production of the *bianco allatale*, or milky-white glaze, and Alfonso II., who continued the experiments, succeeded, about 1567, in making porcelain, according to a letter sent to Florence by Bernardo Canigiana, Florentine ambassador at Ferrara, but no pieces of this ware have been found, while the porcelain of Florence is well known.

In 1579, Alfonso II., on the occasion of his marriage with Marguerite, of Gonzaga, had a service made, painted with a flaming pyre, under the device *Ardet Eternum*, which is also found upon his medals. Upon his death, in 1597, his dukedom was absorbed by the states of the church. A piece painted in manganese on white is signed Thomas Masselli Ferrarian.

The peculiar brilliant white glaze called *Bianco di Ferrara* is mentioned by Piccolpasso as being used there. Grotesque decoration upon white is met with. The arms of Gonzaga and Este are seen on a piece, probably made when John Francis II. married Elizabeth, sister of Alfonso I.

In 1472 Enrico and in 1489 Gio da Modena are recorded as potters. In the sixteenth century Cristoforo da Modena is mentioned a *boccalaro*, and Piccolpasso speaks of the fabric of Modena. C. and D. A. Rubbiana make faience there at the present time. Reggio possessed a fabric in 1565 and Scandiana one in 1754.

Gio Andrea Ferrari founded a manufactory in 1741, to which the almost exclusive monopoly of the duchy was granted by Duke Francesco III. He was joined by Gio Maria Dallari, and obtained later a complete monopoly. The products were exported, but no artists of note appear to have been connected with the fabric. However, Pietro Lei and Ignace Cavatuzzi are known.

Etruria or Tuscia may have been colonized by the Lydians, according to Herodotus. The Romans, who attacked Etruria in the fourth century B. C., and took possession of it 265 B. C., derived many of their laws and superstitions from the Etruscans. The present Tuscany was formerly a grand duchy in Etruria. It formed part of the Lombard kingdom when Charlemagne conquered it in 774 A. D., and later broke up into the republics of Florence, Pisa, Sienna, Luca, &c. Florence became the chief of these under the Medici in 1251, who became the restorers of fine arts and literature in Italy.

Certain pieces of mezza-ware bear a close resemblance to each other, and evidences of a Tuscan origin, probably of 1450-1480. In some a decoration of peacock's feathers is frequent. The earliest dated piece is a tin-glazed figure of the Virgin and Child enthroned in a niche, marked 1477. Certain pieces decorated in pale blue and yellow, upon a good white ground, are also attributed to a Tuscan fabric unknown.—*Crockery Journal*.

OLD BERKSHIRE MILLS

DALTON, MASS., U.S.A.

One party writes: "The two hundred RECORD BOOKS, for 83 of the 99 Counties, now on exhibition at the Iowa State Fair, at Des Moines; and all, but four (!) of them, made from your 'OLD BERKSHIRE MILLS LINEN LEDGER.' Medium, 40lb., make a splendid show

MANUFACTURED BY
CARSON & BROWN CO.

L. PRANG & CO.'S

Christmas and New Year Cards

ANNOUNCEMENT.

WE hereby beg leave to announce to the trade the completion of our line of Christmas and New Year Cards for this season, for which our agents are now soliciting orders. The extent of our list, the originality, and especially the American character of our designs, together with the great care taken in their execution, will, we have no doubt, secure for our goods the popularity which they have enjoyed heretofore. The efforts we have made to secure the highest excellence, is attested by the names of some of the artists whose designs have been reproduced. We would only name Elihu Vedder, C. C. Coleman, Thomas Moran, Miss Rosina Emmett, Miss Dora Wheeler, Mrs. O. E. Whitney, W. H. Gibson, F. S. Church, R. G. Birch, &c. That a due regard has been paid for the quality of the literary matter, in connection with these designs, is shown by the fact that many of the designs are accompanied by original poems from writers of note, such as Mrs. Celia Thaxter and Mrs. Emily Shaw Forman.

The great increase of our manufacturing facilities, secured by additions to our building nearly doubling our floor space and by the adding of new machinery, will place us in a position to fill orders promptly. Still we would request dealers to place their orders as early as possible, so as to still further enable us to make timely preparation for prompt deliveries.

Our Cards will, as heretofore, be put up in envelopes containing twelve Cards, unless otherwise stated on our price lists.

We furnish envelopes without extra charge for all our Christmas and New Year Cards, for which the list price is \$1.80 per set, and over. Our silk-fringed Cards will no doubt be in great demand this season. We have made ample preparation to furnish these in time and have made arrangements with our manufacturers for the best quality of silk fringes. We would call special attention to the excellence of our fringed Cards and the novelties in colors and style of fringes we offer for this season.

A marked and attractive feature of our cards are the elegantly ornamented backs.

All our fringed Christmas and New Year Cards are furnished with envelopes and protectors, so as to insure safe transportation in the mails.

It will be impossible to embody our whole list in the space of the advertisement, and we will therefore merely give a general outline of the variety offered.

PRANG'S PRIZE CHRISTMAS CARDS.

COMPETITION OF 1881.

These are the Cards selected by the judges in the second competition for four designs of Christmas Cards, for which we offered \$2,000 in prizes of \$1,000, \$500, \$300 and \$200 respectively. At the recommendation of the judges, Messrs. COLEMAN, LAFARGE, and WHITE, the prize for third best Card was increased to \$500. Mrs. CELIA THAXTER has written appropriate verses for each of the designs.

- 1st Prize Card (\$1,000), by Elihu Vedder. Size, $6\frac{1}{4} \times 9$ inches; price \$1 each. Same card with silk fringe, cord and tassels, price \$1.50 each.
- 2d Prize Card (\$500), by Miss Dora Wheeler. Size, 7×9 inches; price 75c. each. Same card with silk fringe, cord and tassels, price \$1.35 each.
- 3d Prize Card (\$500), by C. C. Coleman. Size, 7×9 inches; price 75c. each. Same card with silk fringe, cord and tassels, price \$1.35 each.
- 4th Prize Card (\$200), by Miss Rosina Emmett. Size, $5\frac{1}{4} \times 9\frac{1}{4}$ inches; price 60c. each. Same card with silk fringe, cord and tassels, price \$1 each.

The Prize Cards can also be had mounted on heavy board with gilt beveled edges.

We beg to call attention also to the following publications for New Year and Christmas:

- "Goddess Fortune" New Year Card, by Elihu Vedder. Size, $6\frac{1}{4} \times 8\frac{1}{4}$ inches; price 75c. each. Same card with silk fringe, cord and tassels, price \$1.35 each.
- "Christmas Dove." Size, $7 \times 9\frac{1}{4}$. This card is in the same style as the success of the last Easter season, the "Easter Dove." Price 60c. each. Same card with silk fringe, cord and tassels, price \$1 each.

Our Regular Line of Christmas Cards consists, among others, of the following Series:

- Nos. 901, 902, 903, 906, 909, 910. Floral designs ranging in price from 30c. to \$1.20 per set of 12.
- Nos. 904, 905. Humorous Cat and Frog Designs, 60c. per set.
- No. 907 is a new series of Horseshoe designs, 75c. per set.
- Nos. 920 and 929. Children's designs, at \$2.40 and \$3.60 per set.
- No. 922. Shells of Ocean, with figures, \$2.40 per set.
- No. 924. Fans with silk fringes, \$3 per set.
- No. 933. Bric-à-Brac designs, very rich, \$6 per set, and many others.

We offer a similar assortment of New Year Cards, but would call special attention to No. 1320, a new folding calendar, at \$2.40 per set. Most of the Numbers can be had with silk fringes ranging in price from \$2.35 to \$12 per set. Stock will be ready for delivery September 15.

Besides the above, attention is called to our New Birthday Cards, Scripture Texts Cards, New Panels, New Water Colors, by Thomas Moran, and other publications. Our line of Thanksgiving Day Cards will also be shown by our agents.

Trade Novelties.

[We will be glad to receive samples of all novelties issued in the trade, and will notice all such which possess merit free of charge. It is desirable to accompany descriptions with cuts whenever possible.]

NEW PATENTS.

No. 245,871. Printing Press.—William Rumble, New York, N. Y.

The combination, in a printing press, of a cylinder, nippers hinged together, each nipper having a pinion upon its axis, intermediate pinions engaging with the pinions upon the nippers, sliding bars each carrying a rack opposite one of the intermediate pinions, and mechanisms for moving the bars and racks inward, so as to engage with the intermediate pinions as the cylinder is rotated.

No. 245,873. Game Tally.—James Sargent, Rochester, N. Y.

No. 245,881. Water Painting upon Ferrottype and other Pictures.—Helen M. Snyder, Pine Bluff, Ark.

The process of coloring pictures which consists in first coating the picture with a compound of chromic acid burned in alcohol, isinglass and soap, then drying it under a screen, then coloring it with suitable water colors, then coating with a color or colors mixed with the compound of burned chromic acid, isinglass and soap, and finally drying the picture.

No. 245,912. Coin Holder.—Frederick N. Young, Saratoga Springs, N. Y., assignor to Caroline A. Young, same place.

A coin holder composed of a rectangular piece of paper or sheet metal of a size to hold a designated amount of coin, and bent into cylindrical form, its edges slightly separated and strengthened and held in shape by a rectangular frame across the centre of the sides and ends, and provided with a fastening tongue and hole, whereby the denomination and quantity of coin inclosed may be readily seen.

No. 245,960. Top Spinning Device.—Jerome G. Kiah, Huron township, Huron county, Mich.

1. A bifurcated top-handle with the bearings for the shaft of the top cut in the outer edges of the forks of the handle. 2. A bifurcated top-handle with the bearings adapted and constructed to allow one of the forks of the handle to be applied above and the other below the body of the top.

No. 245,970. Plate-Printing Press.—Robert Neale, Brooklyn, E. D., N. Y.

A power plate-printing press which comprises in its construction a reciprocating bed having means on its upper side for holding an engraved plate, the inking apparatus above the bed, the wiping apparatus consisting of an endless woven fibrous belt having means for stretching it and regulating its tension, and an elastically surfaced drum or cylinder, around which the belt is passed and caused to revolve, the belt and drum being applied above the reciprocating bed, the endless polishing belt having a means by which its tension and pressure are regulated, the polishing cylinder, against the upper portion of which the polishing belt impinges, the printing cylinder, and the means by which the wiping and polishing devices are elevated while the bed and engraved plate are passing to the inking apparatus, and are allowed to descend when the bed and plate are passing toward the printing cylinder.

DESIGN.

less trade discounts. Correspondence solicited.

NEW YORK OFFICE AND SALESROOM, 18 MURRAY STREET.

THE BAY STATE PAPER COMPANY, HOLYOKE, MASS.,

were among the pioneers in the W. C. Paper trade, and their goods, from the start, were distinguished for their fine quality and the superior style in which they were wrapped. Their example has been approved and imitated by a swarm of competitors, who have flooded the market with inferior goods, put up in packages of 600 to 800 sheets, misleading the unwary, and sold at apparently lower figures; but the trade and consumers generally recognize the fact that a good article, honestly put up, in 1,000 sheet packages, is the most profitable both for use and for sale. Their goods are all guaranteed 1,000 sheets to package, and no short count. No wood is used in any of these papers, but they are made of the very best stock in the market.

THE "MEDICATED BOUDOIR" BRAND

Has no equal for weight, strength, softness, and color, and commands the front place with "fine retail trade." Present reduced quotations furnished on application.

The attention of the trade is directed to our Fine Manilla Writing Papers and Copying Books. A comparison in price and quality with other goods will convince any purchaser that it will pay to buy of us. Samples and prices on application.

A. C. FARLEY & CO., 407 Walnut St., Philadelphia.

No. 144—7 × 8½ in., Bath Letter.
No. 145—8 × 10 in., Congress Letter.

The above cuts show our new method of putting up *Fine White Writing and Linen Papers*, for general use, in *Portfolio Style*, with a sheet of the best Blotting Paper attached to the cover as represented, making it the BEST and MOST CONVENIENT form for writing tablet in the market, which will only need to be seen to be appreciated.

TOURISTS' TABLETS.

This is a line of *Fine White Writing Paper*, handsomely bound in Tablets, with flexible covers to keep the paper compact and prevent it from being soiled. They will be found very convenient for the use of travelers and others where a less expensive tablet than our "Portfolio" is desired. The covers are printed with a neat design, making them a very attractive as well as convenient article for general use. They are put up in packages with ten tablets of eighty sheets each, of the following Nos. and Sizes:

No. 121.—Commercial Note. No. 122.—Packet Note. No. 123.—Congress Letter.

NEW YORK.

Trade Gossip.

All new goods and designs which are not, strictly speaking, "Novelties" will be noticed under this head. The trade are requested to forward descriptions with samples in order to secure proper notice.

Thos. K. Harding, printer, Bay City, Mich., has sold out to Griffin Lewis.

E. L. Herriff, stationer and bookseller, Dayton, Wash. Ter., has sold out.

Prang's new "Birth Announcement Cards" seem to prove a great success.

M. V. B. Green, bookbinder, Nashua, N. H., has been burned out. Insured.

Ingram & Scranton, booksellers and stationers, Fairfield, Iowa, has failed.

Macfarlane & Dam, publishers, San Francisco, Cal., have dissolved partnership.

The Journal Publishing Company, printer, Arkansas City, Ark., has been burned.

May and Helen Read, dealers in fancy goods, Bodie, Cal., have dissolved partnership.

J. B. Emerson, bookseller and stationer, West Waterville, Me., has sold out to Geo. L. Hovey.

Schlosser & Ingersoll, publishers of the *Democrat*, Columbus, Wis., have dissolved partnership.

Hard & Parsons are said to be taking the lead in the special line of fine holiday goods which the firm handles.

A. J. Regansburg, of A. J. Regansburg & Brother, publishers of the *Atlantic Democrat*, Egg Harbor City, N. J., is dead.

Preston & Littlefield, dealers in fancy goods, Hyde Park, Mass., have dissolved partnership. Business is continued by Nellie M. Littlefield.

Mr. Snider, of Louis Snider's Sons, Cincinnati, arrived in this city on Monday from Maine, where he has been taking a vacation. He left on Tuesday afternoon for home.

Faxon's paper mill, at East Lee, Mass., took fire from spontaneous combustion in the rag room on Saturday afternoon and was totally destroyed. Loss, \$20,000; insurance, \$15,000.

A fire, which caused \$500 damage, occurred in the five-story brick building, No. 17 Spruce street, New York, occupied by the *Shoe and Leather Reporter*, early on Sunday morning.

C. C. White has removed from his old stand, 38 and 40 Reade street, to 151 Chambers street. Increase of business and consequent want of larger accommodation were the causes of removal.

F. W. Klemm, office manager of L. Prang & Co., Boston, has been spending a week in the city on a vacation. He thinks better of Coney Island as a bathing place than of the new "Point of Pines" or even "Ocean Squirt."

Turner & Harrison, of Philadelphia, report an exceptionally good trade for their well known pens. They have never been so busy as they are now. They are working in full force and are turning out goods to their utmost capacity.

Real alligator is now the fashionable leather for pocket books, card and letter cases. Its high cost does not militate against its use, but on the contrary adds to its popularity, and so great has become the demand that the supply of alligator has run short. Jas. D. Whitmore & Co. contracted for a full supply early in the season and are thus enabled to fill promptly their many orders.

The attention of the trade is invited to an advertisement of McLoughlin Brothers in another part of THE STATIONER. It is in relation to a new line of toy books just published by that firm, and which are to be retailed at fifteen cents each. These books are said to be superior to anything of the kind heretofore published at much higher prices by other houses. They particularly excel in quality of material, beauty of design and richness of printing, both as to the laying on of colors and accuracy of register. There is every prospect that the whole line of these new publications will meet with a much greater demand than has attended any toy books previously published by this celebrated house, not excepting its popular line of Aunt Louisa series.

Henry Levy & Son, 477 Broadway, have just opened an elegant line of olive wood goods, all of which are of entirely different designs from anything yet shown in the American market. These are offered at prices which are said to be very low in comparison with prices of goods in this line last year. This house is also exhibiting a new line of rococo baskets, which are of a new style of wicker work, handsomely ornamented with velvet, embroidered and fringed, and artistically lined with silk, satin or velvet. One of these articles would make a handsome and useful present for a lady.

Alex. Cameron, secretary and manager of the National Blank Form Company, 148 Worth street, has just returned from a very successful trip of nine weeks in the West. To prevent any misunderstanding he wishes to inform the trade that he has no interest in or any connection with the business now carried on by W. J. Anderson at 117 Fulton street, under the style of Anderson & Cameron, having sold his interest in the firm to W. J. Anderson nearly two years ago.

L. Prang, of L. Prang & Co., is now in Europe, partly to engage new artists, needed for the enlarged manufacturing facilities and partly to recuperate his health. He visits England, France, Germany, and will probably use the celebrated Kissingen Springs for a month. He is accompanied by Mrs. Prang, and it is hoped that both will return strengthened by their trip.

Ward & Gay, Boston, have taken an agency for the sale of Obpacher Brothers' goods, and are now ready to take orders for them. Obpacher Brothers' Christmas cards and other lines of similar publications are to be seen on exhibition at the Mechanics' Charitable Fair in Boston.

E. & H. T. Anthony & Co. are having a great demand for new pictures of President Garfield, 14 by 17 inches in size. There is also a run on their "Little Ethiopian" picture, which is a photograph of a number of heads of negro children in different positions.

The many friends of W. H. Hill, of Worcester, will be grieved to learn that that gentleman is lying quite sick at the Atlantic House, Nantasket Beach. Mr. Hill has been at the seashore some days, with his family.

The Russell Publishing Company, Boston, forwards the September number of *Our Little Ones*. This magazine, both in matter and illustration, is just suited to the first beginners in life.

Wesley Jones, Burlington, Iowa, has been refitting the Palace Book Store in that city, and the *Hawkeye* thinks that it will be the handsomest store in the State.

The nuptials of William C. Horn, of Koch Sons & Co., takes place on Wednesday next, September 7.

D. H. Conant, dealer in notions, Geneva, Neb., has sold out.

Darius Negus, fancy goods dealer, Fall River, Mass., has failed.

C. C. Merrick, dealer in notions, Petosky, Mich., has sold out.

Eugene F. Forman, publisher of the *Lynn Reporter*, Lynn, Mass., is dead.

Alexander Waugh, paper stock dealer, San Francisco, Cal., has been burned out.

G. G. Wallace, printer, Pawnee City, Neb., has been succeeded by Wallace & Wallace.

Gillen & Ziegler, ink manufacturers, Philadelphia, Pa., were damaged by fire on the 23d to the extent of \$2,000.

Saunders & Lamb, publishers of the *Herald*, Forth Smith, Ark., have dissolved partnership. John C. Saunders continues.

Charles F. Bradley, of Cincinnati, passed through here this week on his return home, after a pleasant vacation at the seashore, looking much improved.

E. A. Pelletier, of L. Prang & Co., New York, will take to the road early in September with a full line of all of Prang's publications. He requests his friends to hold his orders for him.

Mrs. Matthew Burn, dealer in fancy goods, Tilsenburgh, Ont., has assigned in trust, and is offering to compromise at twenty-five cents on the dollar. Stock advertised for sale by trustee.

Jacob Brown, with Willy Wallach, has just returned from his Western trip selling Tuck's cards, and is looking and feeling cheerful. Mr. Wallach's salesmen all appear to be actively engaged in putting up orders.

J. W. Randolph & English, of Richmond, Va., whose enterprise is well known, have a full line of paper boxes on view at the Exhibition of the Pharmaceutical Association, Kansas City, Mo. Their exhibit is highly spoken of.

The *Morning Times*, Selma, Ala., gives a brief sketch of the stationery and book house of that city of which W. G. Boyd is the head. This gentleman has been in business in Selma since 1857, and has advanced from a clerkship at that time to the control of the business. He is said to apply himself closely to business and to be one of Selma's most valuable citizens.

Charles J. Cohen, Philadelphia, has been very busy for the past fortnight in filling orders for school supplies. The entire establishment has been frequently retained for night work, as it is the desire of the house to fill all orders carefully and promptly. All hands have now returned from summer vacations and the various departments are bristling with activity.

Myers Brothers are daily adding to their fine cabinet papereries so as to meet the pressing demands of the fall trade. The house is making a specialty of this line of goods and is displaying some of the most exquisite designs ever exhibited, and has left nothing undone to please the most fastidious. The trade are requested to call and see the firm's goods.

R. Fideau has just brought out a very taking idea in school bags. He has interwoven in them red, white and blue, which give them the appearance of the American flag. He has christened this last the "Union" bag, and although it has just been put upon the market, he has already more orders for them than he can fill at once. This idea is entirely original with him and has not been used before. His price for this style is no higher than for his other patterns. Mr. Fideau is filling an order for China for 6 gross of hammocks, 650 cases school slates and

100 cases slate pencils, and he is so busy that he cannot fill new orders for his "O.W. Busybody" school bags before the middle of September.

E. P. Coby & Co. are now running on their pad calendars for the coming year, which they offer at their usual low prices.

Frederick Phillips, manager of the manufacturing department of Berlin & Jones, has just returned from a three weeks' fishing and gunning excursion in the Adirondacks region, looking healthy.

S. S. Stafford is doing such an active business, with his various styles of ink and mucilage, that he is unable to fill his orders promptly, and is now behindhand on many. His sales for August were the largest of any month since he has been in business. The orders from England have been increasing very rapidly.

H. E. Siddall, with Merrill, Hubbard & Co., Indianapolis, for some eight years, has opened out with a stock of books and stationery of all descriptions at Minneapolis, Minn. Fine writing paper and wedding stock are made a specialty. He would like the catalogues and price lists of stationers and publishers. The style of the firm is H. E. Siddall & Co.

J. B. Lippincott & Co., Philadelphia, are offering the "Perfection" duplicate copying tablet, by the use of which copies of letters or orders can be made and preserved without the use of ink or the copying press. An error in the advertisement of this tablet has led to the statement that the use of ink, &c., is necessary. The word "with" in that advertisement should read "without."

W. A. Haines, Philadelphia, is now showing a large line of small hand bags in numerous styles of plain and fancy plushes. He has already received a number of orders for several styles which are entirely novel, and he says that trade on these goods promise to be "immense." As some of the styles of plush he now has cannot be duplicated the trade are advised to see his samples early.

Among the visiting members of the trade in the city during the past week were G. A. Spooner, Leavenworth, Kan.; Mr. Weizel, of Anderson & Weizel, Meadville, Pa.; E. Whitney, Worcester, Mass.; Mr. Carpenter, of Carpenter & Barrel, Albion, N. Y.; James E. Mosley, Madison, Wis.; R. J. Kopperel, Austin, Tex.; J. M. Dickey, Newburg, N. Y.; James Young, Bridgeport, Conn., and D. W. Crider, York, Pa.

TO REMOVE DRIED OIL FROM IRON OR BRASS.—To effect this without scraping, a large number of plans can be suggested. Ammonia (spirits of hartshorn), soda or soda lye, spirits of turpentine, a mixture of alcohol and ether, or benzine (petroleum spirit) may be used, and any one of them may be found to answer the purpose. The use of alkali (ammonia or soda) will probably prove the most effective; but it must be used cautiously, on account of its corrosive action, and afterwards thoroughly removed.

BLACK FOR FRAMES.—Take 1 gallon of strong vinegar, 2 pounds of extract of logwood, $\frac{1}{2}$ pound of green copperas, $\frac{1}{4}$ pound of China blue and 2 ounces of nutgall. Put these in an iron pot and boil them over a slow fire till they are well dissolved. When cool the mixture is ready for use. Add to the above $\frac{1}{2}$ pint iron rust, obtained by steeping iron filings in strong vinegar. The above makes a perfect jet black, equal to the best black ebony, and the receipt is a valuable one.

— Established by HENRY COHEN in 1838. —

505 CHESTNUT ST., PHILADELPHIA.

CHARLES J. COHEN,

Wholesale Manufacturing Stationer, Importer of Fancy Goods and Envelope Manufacturer.

SCHOOL STATIONERY,

THE STATIONER.

DEVOTED TO THE INTERESTS OF THE

Stationery and Fancy Goods Trades.

WEEKLY--\$2.00 PER ANNUM.

Single Copies - - - 10 Cents.

NEW YORK, THURSDAY, SEPTEMBER 1, 1881.

Advertisements cannot be received for insertion in the current week later than 12 m. on Wednesday. The charge for advertising is 25 cents a line, each insertion. Special terms for standing and displayed advertisements to be had on application.

This journal aims to be a medium of information for a representative of the interests of every one connected with the stationery and fancy goods trades. It contains a full and trustworthy survey of the market for stationery in this country, in all cases giving the actual prices at which goods can be bought of importers and jobbers in this city, together with a detailed account of novelties in the trade, patents relating to stationery, and current items of interest. A review of foreign markets and accounts of movements abroad will also be furnished, and no pains will be spared to make THE STATIONER a thorough and complete exponent of the trade.

Subscription and postage for Great Britain, per annum..... 12s.
Any information our readers may wish to obtain shall be cheerfully given, and prompt replies will be made to all inquiries addressed to us on any subjects of interest to the trade.

Communications on all trade matters are earnestly solicited. Address

HOWARD LOCKWOOD, Pres. and Treas.

Subscribers to THE STATIONER can be supplied with the best cloth binder in the market. Deliverable at the publication office. Price, fifty cents.

Readers of this paper who avail themselves of the information obtained from its columns, by advertisement or otherwise, are requested to notify their correspondents of the source of their information.

At this moment we feel like a perennial spring and want to hire out for a fountain. No drought with us.

FALSE prophets abound in all times. Venor is a deceiver; and whether he means to be or not, he can't tell us all about the weather.

SOME gentlemen in the city paper trade had a friendly contest at base ball last Saturday. There were eighteen of them engaged in the scuffle, and nine of them returned home thinking that "this world is all a fleeting show."

WHATEVER the harvests out West may be, it seems that trade is good. Our correspondents at the West unite in this report, and from all accounts a heavy amount of business has been done and will follow the summer's campaign.

RESPONDING to some remarks in this column in comment on the practice of manufacturers of stationery goods selling to houses not in the trade and the fact that the latter undersold the legitimate trade, we have received through our Chicago correspondent a communication from a Western stationer. This is sent to us in answer to a demand for "something tangible." But in this instance we fail to see where the retail stationery trade is affected or in anywise concerned. The facts are these: The Western stationer, wanting to buy certain grades of lead pencils, wrote to the manufacturers asking what houses in Chicago jobbed their goods. In reply he was given in one instance the name of a large stationery house with the names of two wholesale dry goods and notions jobbing houses. In the other instance he was furnished with the names of four leading stationery houses and of five dry goods and notions houses, &c. As far as we are informed all of the Chicago houses named are jobbers. It is not alleged that they sold the goods for less than the regular jobbing trade prices or at lower rates than authorized by the manufacturers' price lists. So far, we ask whether the stationer desiring to sell lead pencils at retail has been affected or prejudiced by the fact that the manufacturers offered him so many different ready sources of supply. It is not charged that any of the jobbing houses, stationery or otherwise, sold the goods at retail, or that they undersold the regular discounts for the sake of leading trade. If they did, it is for the jobbers to complain. The principle against which our Washington correspondent was outspoken was that of manufacturers' selling goods to dry goods and other retail dealers who sold down to cost, or even under it, for the sake of attracting customers from whom they expected to make up the difference by excessive profits on their legitimate lines. As yet, in the case last presented to us, we cannot find that the manufacturers whose names have been handed to us have done anything to affect the integrity of their trade or adverse to the interests of those to

whom they are most largely indebted for the distribution of their goods. As we have said before, we are ready to expose all injustice and every action which impairs the faith which tradesmen of a common guild have the right to expect of each other; but we are not all for one side. We must be just to all, and shall exercise a judicial impartiality in the discussion of all subjects bearing on the interests of the trade. If a wrong has been done we shall not hesitate to rebuke it and name the offenders; but the proofs must be presented, and we must have, as we said, "something tangible."

ANSWERS TO CORRESPONDENTS.

A. P. P. Co. asks: Who manufactures animal-sized paper in rolls.

Ans.—H. V. Butler Jr. & Co., 32 Reade street, New York, make it, and we believe that no one else in this country does.

S. C. W. wants to know: 1. Where to get perforated sermon paper put up in one and two quires with manilla covers; 2. Who manufactures writing desks, with address of a manufacturer in Indiana.

Ans.—Acme Stationery and Paper Company, 117 Fulton street, and Morgan Envelope Company, 18 Murray street, New York. 2. W. S. Conant, 323 Grand street, New York, and Moore Combination Desk Company, Indianapolis, Ind.

OBITUARY.

JOHN LEWIS.

John Lewis, of the firm of Hooper, Lewis & Co., Boston, died of typho-pneumonia at Sharon, Mass., on Monday last, after two months' illness. He had been forty-nine years in the stationery trade. His remains were taken to his home in Boston.

It is said that the stock of school slates is exceptionally light this year, and that many manufacturers are unable to fill their orders. One prominent dealer in New York has to-day made a slight advance in his prices and expresses the belief that prices will go 10 per cent. higher before the fall demands are satisfied.

THE LAST BALL MATCH.

The return match at base ball between sides of the paper and paper stock trade of Beekman and Duane streets came off on Saturday afternoon at the Union Grounds, Brooklyn, and after quite an exciting contest, which was witnessed by quite a large representation of the paper and paper stock trade as well as a few in the stationery trade, resulted in the success of the Beekman Street Nine by a score of 29 to 24. The Duanes led the Beekmans two at the end of the first inning, four at the end of the third inning, six at the end of the fourth inning; but on the fifth the entire character of the game changed, as the Beekmans made ten on that inning, and the Duanes one, which brought the Beekmans out three ahead on the completion of the fifth inning. The Duanes made three on the sixth inning, and the Beekmans two, the latter leading the Duanes two on the sixth inning. On the seventh inning the Beekmans made six, and the Duanes three, the score of the latter footing up 29, and of the Duanes 24. It then became too dark to play further, and the contest ended, mutual cheers marking the close of the game. The match was well umpired by Mr. Bassett. The battery work and pitching was very poor on both sides, the consequent errors on wild pitches and passed balls giving over half the runs each side scored. The full score gives the figures:

DUANE.

SCORE BY INNINGS.

	1	2	3	4	5	6	7
Duane Street.....	6	5	4	2	1	3	3-24
Beekman Street.....	7	2	4	2	0	10	2-29

First base by errors—Duane Street, 11; Beekman Street, 7.
 Earned runs—Duane Street, 1; Beekman Street, 13.
 Left on earned bases—Duane Street, 3; Beekman Street, 5.
 Struck out—Duane Street, 4; Beekman Street, 4.
 Wild pitches—Graham, 8; Maynard, 7; Chichester, 5.
 Passed balls—Scott, 4; Chichester, 5; Maynard, 4.
 Umpire—Mr. Bassett.

With some few changes in the nines, another game between the representatives of Duane and Beekman streets will be played on Saturday afternoon at the same place.

EGYPTIAN ANTIQUITIES.

A discovery of special interest to Americans has just been made in Egypt by a younger brother of the well known Prussian archaeologist, Brugsch Pasha, who represented Egypt at the Philadelphia Centennial in 1876. He has found about four miles east of Thebes the mummies, with all their mortuary appendages and inscriptions, of no less than thirty royal personages. Among the thirty royal mummies are those of King Thothmes III., and of King Rameses II., the first of whom ordered the construction of the obelisk which now stands in our Central Park, and the latter of whom, two hundred and seventy years afterwards, caused his own official titles and honors to be inscribed on its faces, besides

those of Thothmes III. These two monarchs now lie side by side in the Boulak Museum, and even the flowers and garlands which were placed in their coffins may to-day be seen encircling the masks which cover the faces of the deceased just as they were left by the mourners over three thousand years ago.

Last June Daoud Pasha, governor of province of Kenel, which includes the ancient Theban district, noticed that the Bedaween offered for sale an unusual quantity of antiquities at absurdly low prices. The Pasha soon discovered that the source of their hidden treasure was situated in a gorge of the mountain range which separates Deri-el-Bahari from the Bab-el-Malook. This gorge is situated about four miles from the Nile, to the east of Thebes. Daoud Pasha at once telegraphed to the Khedive, who forthwith dispatched to the spot, Herr Emil Brugsch, a younger brother of Dr. Henry Brugsch Pasha, who, during M. Maspero's absence in Paris, is in charge of all archaeological excavations in Egypt. Herr Brugsch discovered in the cliffs of the Lypian mountains, near the temple of Deir-el-Banari, or the "Northern Convent," a pit about thirty-five feet deep cut in the solid rock. A secret opening from this pit led to a gallery nearly two hundred feet long, also hewn out of the solid rock. This gallery was filled with the relics of the Theban dynasties. Every indication leads to the conviction that these sacred relics had been removed from their appropriate places in the different tombs and temples, and concealed in this subterranean gallery by the Egyptian priests to preserve them from being destroyed by some foreign invader. In all probability they were thus concealed at the time of the invasion of Egypt by Cambyzes.

Herr Brugsch at once telegraphed for a steamer, which on Friday last safely deposited her precious cargo at the Boulak Museum.

The full value of the discovery of course cannot as yet be determined. The papyri have not yet been unrolled, nor have the mummies been unwrapped. The following Theban sovereigns are the most important of those whose mummies Herr Brugsch has identified:

- Aahmes I. (Amosis), first king of the eighteenth dynasty, reigned B. C. 1700 (about).
- Amenhotep I. (Amenopsis), second king of the eighteenth dynasty, reigned B. C. 1666 (about).
- Thothmes I., third king of the eighteenth dynasty, reigned B. C. 1633 (about).
- Thothmes II., fourth king of the eighteenth dynasty, reigned B. C. 1600 (about).
- Thothmes III. (the Great), fifth king of eighteenth dynasty, reigned B. C. 1600 (about).
- Rameses I., first king of nineteenth dynasty, reigned B. C. 1400 (about).
- Seti I., second king of nineteenth dynasty, reigned B. C. 1366 (about).
- Rameses II. (the Great), third king of nineteenth dynasty, reigned B. C. 1333 (about).
- Pinotem, third king of twenty-first dynasty, reigned B. C. 1033 (about).

Raskhenen (dynasty and date of reign unknown).

Queen Ra-ma-ka (Hatasos?)
 Queen Aahmes Nofert Ari.

Conspicuous by its massive gold ornamentation, in which cartouches are set in precious stones, is the coffin containing the mummy of Maut Nedjem, a daughter of King Rameses II.

Each of these mummies is accompanied by an alabaster canopic urn, containing the heart and entrails of the deceased.

Four papyri were found in the gallery at Deir-el-Bahari, each in a perfect state of preservation. The largest of these papyri—that found in the coffin of Queen Ra-ma-ka—is most beautifully

illustrated with colored illuminations. It is about 16 inches wide, and when unrolled will probably measure from 100 to 140 feet in length. The other papyri are narrower, but are more closely written upon. These papyri will prove to be the most valuable portion of the discovery, for in the present state of Egyptology a papyrus may be of more importance than an entire temple, and the late Mariette Pasha used to say, "It is certain that if ever one of those discoveries that bring about a revolution in science should be made in Egyptology, the world will be indebted for it to a papyrus."

Market Review.

OFFICE OF THE AMERICAN STATIONER, I
 WEDNESDAY, August 31, 1881.

THE MONEY MARKET.—The money market worked closely, and borrowers on call were compelled during the week to pay as high as 1-64 of 1 per cent. per diem in addition to legal interest. The rates ranged from 5 to 6 per cent. on pledge of acceptable stock collaterals, and at the close the current quotation was 6 per cent. Loans on government bonds were made readily at 4 per cent. In spite of a close money market, business at the Stock Exchange has improved and the tone of the market is stronger, due largely to covering of short sales. There has been an active demand for government 4 and 4½ per cents., and prices have advanced. Railroad bonds are generally strong, and some of the issues that suffered the greatest decline last week have become buoyant, in sympathy with the share list. In the market for foreign exchange long date sterling was decidedly weak, prime bankers' 60-day having been obtainable at 4.79@4.79½, although the posted rate is 4.80½. Short date or demand drafts were firmer, although these sold for prime at 4.83½@4.83¾, while the posted rate is 4.84, and cables are selling at 4.84½@4.83¾. Prime commercial bills are 4.77¼@4.77½.

THE PAPER MARKET.—With the approach of autumn the volume of general trade begins to increase, and the consumption of paper is correspondingly greater. In every direction the prosperity of the country seems to inspire a hopeful feeling as to the business results of the ensuing season. The fall season in the paper trade this year began under far more favorable auspices than at the corresponding time last year. A year ago we had not fully recovered from the effect of over trading which a spirit of speculation had brought on, the result being that large stocks of paper, bought at high prices during the "boom" in the spring, were left over in the hands of dealers and consumers. The fall season this year will open with a legitimate healthy demand for paper and prices with an advancing tendency, quite in contrast with last year at this time, when values had not stopped receding. Many manufacturers who took orders early this summer, and who are still actively engaged in the execution of them, are now unwilling to accept any new ones, unless at an advance on the prices last made, and there is a general unwillingness to name prices now to rule longer than a few months ahead. Taking the trade altogether, neither the manufacturers nor dealers have very much to complain of at this time; and although they are not making as much money as they did seventeen or eighteen years ago, they are certainly not making and selling paper at a loss, as some of them have done in the past few years.

THE STATIONERY MARKET.—There is no lull in the active condition of trade previously reported, every branch having all it can do to execute its orders, while in some lines of trade, particularly the furnishing of school supplies, it has been almost impossible for some of our large houses making a specialty of that class of business to ship large orders in time for the opening of the schools. In the fancy goods branch there is an unusual amount of activity in progress, and each house vies with its competitors as to which shall sell the most goods. The blank book and envelope trade also are not behind any other branch in coming in for their full share of sales. There is a great amount of competition in these two lines of staple goods, and, as might be expected, buyers are able to purchase on very fair terms. There are no fluctuations in prices, and whatever changes may occur, the tendency is almost decidedly in favor of an advance.

PRANG'S CHRISTMAS CARDS FOR 1881-82.

These comprise a larger variety than has ever been offered before by the enterprising firm, but their artistic merit is unquestionably higher than they have ever before attained. The two previous prize competitions afforded Mr. Prang a very excellent opportunity to purchase a large number of the most deserving designs, and these form the nucleus of the new line. It must be acknowledged that the utmost punctiliousness has been observed in their reproduction, and in many instances the copy so closely resembles the original that one cannot be told from the other.

The Christmas card line comprises about 120 different designs of all sizes, and as most of these are put up either as single or as double cards, with or without fringes, or on heavy mounts, the immense variety thus offered will readily be seen. As space does not permit of a full description, only a few can be named; but it must not be supposed that those not mentioned here are less deserving. Dealers should write for price lists, which are furnished gratis, in order to get a description and the prices. It should also be borne in mind that the mounting or the fringing takes much time, and orders should therefore not be delayed. Nos. 901 and 902 are small floral cards; Nos. 904 and 905 are humorous "Cat and Frog" designs, very comical and neat; No. 907 is a set of four new floral horseshoe cards, which bid fair to rival in popularity the last season's horseshoe cards, which met with an unprecedented success; No. 910 shows six designs of wild flowers; No. 911 is a large card and shows two humorous designs, the one a colored coachman entering the house loaded with the presents just bought by his mistress on a shopping expedition, the other shows the baby elephant's first Christmas with a "trunk full of love and good wishes;" No. 913 presents six designs of vases, flowers and bric-à-brac, very delicate in execution; No. 914 brings two owl designs, and No. 915 shows two handsome children's designs by F. S. Church. No. 916 has six floral Christmas crosses, and 917 shows four handsome designs of baskets and flowers; No. 918 is a large card and brings four designs of birds and nests, while 919 contains four novel and handsome designs of landscapes, vases and plaques. No. 920 shows three fine designs of children's heads, well executed; No. 921, four very tasty and elegant floral designs of a panel shape—a card sure of a large sale. No. 922 has four designs of ocean shells and weeds, each shell bearing a handsome beach scene. No. 923 is a folding card showing two wreath designs of flowers and fruit on a birchbark ground. No. 924 deserves special attention; it presents three designs of an open fan, very handsomely made, and edged with fringe. Two of the fans are pasted together back to back, so that a picture appears on either side. This card finds an immense sale, and it is said that present orders have already exhausted two large editions. Set No. 925 consists of two large square floral designs of roses and pansies in Mrs. O. E. Whitney's best style. No. 926 contains only one design, but a very pretty one, which attracted much attention at the prize exhibition. It represents four mischievous "Frost Fays" at play amidst the snowy branches of a tree. This card should not be omitted on any order. No. 927 also shows only one design by R. G. Birch—"the rich visiting the poor on Christmas Day, bringing their good cheer." No. 928 is a design by W. Hamilton Gibson, called "Birds in Winter," quiet and subdued in tone and chaste in its conception. No. 929 shows two charming designs of children's heads; the faces are beautiful, and most care-

fully lithographed. This is an elegant set, and will be a favorite. No. 930 shows in two designs "Christmas Outdoors and Indoors." First Santa Claus arrives, ready to drop his presents down the chimney; and next is the indoor view, a bright chimney fire, with the customary row of stockings in front of it, ready to receive their load. No. 931 brings four exceptionally fine designs of vases and flowers of a large panel shape; while No. 932 presents two entirely different designs, "Awaiting Santa Claus" and "Christmas Bubbles," a very elegant and rich card. No. 933 has two designs of Christmas bric-a-brac by Thomas Moran. Mr. Moran's name being a guarantee for excellence, it is needless to say anything about this set but this card can be recommended. No. 934, in two designs, brings in a folding card, with tassels for hanging "Christmas Music and Christmas Cheer."

The New Year's card line for 1882 is identical with the Christmas line, with the exception of No. 1,320, a very handsome calendar, which does not appear in the Christmas line at all. This is a very pretty card, and the particular attention of all dealers is called to it, for the reason that it should not be left out of any order. It is sure of a large and steady sale.

Frang's prize Christmas cards for 1881 are too well known to need a description. They are sold at: First prize (Elihu Vedder, \$1 each; second prize (Dora Wheeler), 75 cents each; third prize (C. C. Coleman), 75 cents each; fourth prize (Rosina Emmett), 60 cents each. All can also be had with fringe or on heavy mounts.

Frang's Christmas Dove bids fair to rival in popularity the celebrated Easter Dove issued last Easter. Orders for them are said to be immense. Price 60 cents each, or \$1 with fringe or on heavy mount. This card is a beautiful companion to the Easter Dove, and those having the one should buy the other.

A prominent feature of all of Frang's cards, and one to be especially noted, are the backs. Excellent taste is shown in their ornamentation, and in many cases the backs alone are veritable pieces of art. They add largely to the beauty of the cards, and give them a finishing touch which is sure to be appreciated by the public. Envelopes are furnished, without extra charge, with all cards costing \$1.80 a set or over, and thus a long felt want is supplied, and the difficulty of finding suitable envelopes for the ever varying size of the cards is overcome.

Frang's new birthday cards form an extensive and very elegant line, to which attention is especially called. Want of space prevents enlarging upon them at present.

The new thanksgiving and birth announcement cards mentioned last week should not be overlooked by the trade. It is said that the description in the last issue of THE STATIONER has already borne fruit, and that many inquiries referring to it have reached the publishers.

The *Nichi-Nichi Shim-bun* gives a melancholy account of the embarrassments of journalism in Japan. On the 26th of April last, the ex-editor of the *Toyo-Jiyu Shim-bun* was summoned to the Procurator's office in the Tokio Saibansho, and "Mr. Matuzawa, of the editorial staff of the same journal, was arraigned there in handcuffs and tied up with a rope round his loins." The *Nichi-Nichi Shim-bun* says that "it is very sad to see journalists thus treated who have worked for the benefit of their country." Mr. Matuzawa's sole offence is said to have been that of publishing a statement that the Mikado had instructed the Minister of the Imperial Department of the Household to order Mr. Saionji to resign the editorship of his journal.

PHOTO-LITHOGRAPHIC TRANSFER PAPER AND INK.

The paper is treated with a solution of a hundred parts of gelatine and one part of chrome alum in 2,400 parts of water. After drying, it is treated with the white of egg. It is made sensitive with a bath consisting of 1 part of chrome alum, 14 parts of water and 4 parts of alcohol. The latter ingredient prevents the white of egg from dissolving. On the dark places the white of egg, together with the ink with which the exposed paper has been coated, separates in water. The transfer ink consists of 20 parts of printing ink, 50 parts of wax, 40 parts of tallow, 35 parts of colophony, 210 parts of oil of turpentine, 30 parts of Berlin blue. It is found that a varnish formed of Canadian balsam, dissolved in turpentine, supplies a most valuable means of making paper transparent. The mode by which this is most satisfactorily accomplished is by applying a thin coating of this varnish to the paper, so as to permeate it thoroughly, after which it is to be coated on both sides with a much thicker mixture. The paper is kept warm by performing the operation before a hot fire, and a third or even a fourth coating may be applied until the texture of the paper is seen to merge into a homogeneous translucency. Paper prepared according to this process is said to come nearer than any other to the highest standard of perfection in transparent paper. Care must be used in making, as the materials are highly inflammable.

ORIGIN OF BOOKBINDERS' CLOTH.

Robert Leighton says, in the *Bookseller*, the embossing of bookbinders' cloth was suggested by my father to the late Mr. De la Rue, and was by him carried out so admirably that his process remains in use unaltered to the present day. The desired pattern was engraved on a gun metal cylinder, and transferred in reverse upon one made of compressed paper, strung upon an iron spindle and turned in the lathe to the exact circumference of the gun metal one; and, these two being worked together in a machine and the pattern transferred from one to the other, the cloth was passed between them and received the impress of the pattern engraved on the metal cylinder. In this way the whole of the cloth used by our firm was for many years embossed upon our own premises. The cylinders were only fourteen or fifteen inches wide, and the machine was turned by manual labor and heated by red hot irons, which were placed into the gun metal cylinder, and replaced by others when cold.

In 1836, bookbinders' cloth was in general use, and had been so for some years, but there was no manufactory of bookbinders' cloth then in London carried on by any one. We were still buying our white calico and dyeing it, calendering it and embossing it on our own premises, and other houses had followed our example and had set up similar embossing machinery, and we were at that time selling bookbinders' cloth to the trade.

The late George Whitelaw, for many years the manager of Eyre & Spottiswoode's Bible warehouse, had just commenced business in a very small way as a bookbinder, and a customer offered him a valuable order for binding in the new material, giving him one of my father's books as a pattern. He walked all over London to try and get some, and failed; but ultimately he screwed up courage to go to my father, who received him most kindly and offered to supply him on liberal terms.

The first person to undertake the embossing of

bookbinders' cloth, on cylinders a yard wide, was Mr. Law, of Monkwell street, and for years he embossed all the cloth Mr. Wilson sold.

The first man who really manufactured and sold bookbinders' cloth was Thomas Hughes, of Bunhill Row, and he brought the article to such perfection that we gave up our dyeing and calendering, and bought our goods of him in a finished state.

After bookbinders' cloth had been in use more than twenty-five years, James Leonard Wilson sold his drapery business in St. John street to Messrs. Duffield (who still carry it on), and established a manufactory at Hoxton, which has since grown to enormous dimensions, and he so improved the manufacture that he distanced all competitors, and at one time he was without a rival either in this country or abroad.

The exact period when gold stamping was first applied to bookbinders' cloth is clearly marked by the publication of Lord Byron's life and works in seventeen volumes. The volumes were published monthly, and had a sale of about 20,000. They were bound in green cloth, and the first volume was issued in 1832, with a green paper label on the back, matching the cloth in color, on which was printed in bronze the title and a coronet; on the second and succeeding volumes the paper label was dispensed with, and the coronet and title were stamped in gold upon the cloth itself.

A man who has no good quality but courage is in a very ill way toward making an agreeable figure in the world, because that which he has superior to other people cannot be exerted without raising himself an enemy.

CHICAGO, September 1, 1881.

DEAR SIR—With our Compliments, we desire to invite you to an examination of our HOLIDAY STOCK when you visit this city. Our Mr. Carl Beer, recently returned, has spent five months in Europe, purchasing from first hands for cash the greatest variety and most elegant stock of **Fancy Goods, Toys and Novelties** of the German, French and English Markets, which, with the elaborate selection of American made Fancy Goods for the Holiday Trade, makes our Stock the most complete ever offered in this city. We guarantee Low Prices, and hope you will favor us with a call.

Yours Respectfully,

SCHWEITZER & BEER,

THE FUNCTIONS OF CHINA PAINTING.

Painting on china enjoys a liberty denied to many of the accessory arts. Indeed, it is not so strictly accessory as some of them. There is, of course, a vast amount of painting on china that is purely and simply decorative. Most of the Oriental domestic pottery pretends to be nothing more, and ours would be better if it were always equally modest. The common vessels in everyday use are pushed into undue prominence by any but the most sober ornamentation, and in all that comes under the denomination of useful pottery whatever painting is permitted must be altogether subsidiary to its purpose. In the same way all plaques and panels used in furniture and tiles used in decoration must conform to decorative fitness, and take their places in the general scheme.

There is, however, a class of china painting that is not and does not pretend to be useful, and it would be pedantic to deny that such a class has a perfect right to exist. There is not so much beauty in the world but that it is to be welcomed wherever we find it, in marble or in clay, on canvas or on china; and it must be admitted there is this advantage in porcelain painting: the vitreous glaze absorbs no dirt; the sponge, that has made such havoc among oil paintings, restores a china painting to its first purity of tint. Work of this class, then, though it is painted on china, need not be any more restrained by decorative considerations than oil or water color painting. When it happens to form the decoration of an ornamental vase, the shape of the vase has naturally to be considered; but this is little more than saying that the composition has to be studied, as it has also to be studied in a picture; perhaps, however, through association, we come to expect (and therefore to demand) rather severer lines than would otherwise be necessary.

In a china plaque even this consideration does not occur; it may be neither more nor less than a picture, and as perfect of its kind as an oil painting. There is the difference—in the kind. The range of the china painter is so very different from that of the oil painter, and so much more limited, that his claim to picture painting ceases to hold good, and practically his material so tyrannizes over him that, even when there is no decorative purpose to be taken into consideration, his art has almost more in common with the decorative crafts than with pictorial art.

Even in picture painting it is admitted to be the highest wisdom to get the utmost out of your material; in water color to avail yourself of its transparency and purity; and in oil to make the most of its solidity and strength. Still more necessary is it, in working in a medium that is less pliable than these, to take advantage of the facilities it naturally offers and to attempt nothing that will bring into prominence its limitations; rather to let those facilities and those limitations determine to a great extent (as they do in the decorative arts) what shall be attempted.

The nature of china painting seems to protest against the idea of endeavoring to reproduce natural color. There is no occasion to decide what is possible in that way; anything may be possible as a *tour de force*; but the palette of the china painter is so limited (more especially if he paint underglaze, which is by far the preferable method), and the dangers of the kiln are such, that natural color, if attainable, would never be worth the anxiety and toil it entailed. On the other hand, ceramic colors lend themselves very readily to certain effects of color more or less decorative—color to be delighted in

for color's sake and difficult to rival in other mediums. By limiting one's self to the use of colors that will bear the same fire without hurt, it is a simple matter to obtain results that are not only decorative, but absolutely beautiful. There is a certain amount of accident in these results—the kiln is never quite to be trusted,—but it is accident of a kind that one learns to anticipate and even to rely upon; and if one can never be absolutely certain of a shade, one learns to reckon very confidently upon a satisfactory effect of color.—*Art Amateur.*

OLD STYLES OF WEAPONS.

It is amusing to read of the early European cannon, to say nothing of the wooden cannon of China. At the siege of Constantinople, in 1413, was used a canon, with a four-foot bore, that cast a stone missile weighing 600 pounds. In the arsenal of Venice is a large mortar composed of several thicknesses of coiled hempen rope, covered with a thick casing of leather. This weapon was captured from the Turks, and fired a shell 18 inches in diameter. Mortars composed of paper, with an outside covering of leather, are preserved in the arsenal at Malta. They were probably of Eastern manufacture, and used during the Crusades or earlier. Early European cannons were of wrought iron and loaded at the breech, and had a greater thickness of metal at the muzzle than anywhere else, with the idea of preventing the muzzle from jumping up at the moment of discharge. The honor of successfully applying the explosive shell to firearms is due to the Netherlands, but their shells required "double ignition"—that is, first a lighting of the fuse which fired the explosive charge of the shell, and then a firing of the mortar charge, the delightful result of which was that not a few shells burst in their mortars whenever the mortar charge happened to miss fire. The Germans invented the single ignition bomb.

The early hand firearms were hardly a success, because in 1585 Montaigne wrote that the effect of firearms, apart from the shock caused by the report, to which one does not get easily accustomed, was so insignificant that he hoped they would be discarded. In those days the hand culverin, of which the Swiss army had 6,000 at the battle of Morat, required two men to handle it. It was fired from a fork or rest, which also served as a ramrod. One man leveled and held the weapon during discharge and a companion applied the priming and match and assisted in loading and carrying the weapon. Peculiar weapons, introduced in the first part of the fifteenth century, were the club pistol, the pistol battle ax and the holy water sprinkler—all intended for horseback use. All the early firearms were slow to load. At the battle of Kuisvingen, in 1636, the slowest soldiers managed to fire only seven shots during eight hours. A quicker mode of ignition was required, and this developed the arquebuse, or matchlock, which carried a match in the "serpenter" or hammer, and had a slow match continually burning in a holder on the top of the barrel. The wheel-lock was a late idea, and was invented at Nuremberg in 1515. Rifles were possibly invented as early as 1440, but the grooving would seem to have been parallel with the axis of the bore. Spiral grooves were first introduced by Gaspar Kollner, of Vienna, in 1498, but it was not till the seventeenth century that the rifle became a military arm on the Continent, and its introduction in England did not take place till nearly a century later.

TIN TOYS.

Wolverhampton claims to have the monopoly of the tin toy manufacturing trade not only throughout England, but, with the exception of a few French and German firms, throughout Europe, and it is even believed that this monopoly pretty much extends to the United States also. As may be well imagined, it is an industry of long standing, Wolverhampton having been the productive centre for seventy years. Birmingham has earned for itself the title of "the toy-shop of the world," but, although attempts have been made now and again to establish the tin-toy branch there, it is understood that they have met with but little success. One reason for this may perhaps be that the trade is one which demands a considerable amount of skill on the part of the operatives, and that they require to be trained up to this particular class of manufacture. Consequently, the supply of such labor is very limited, and Wolverhampton has taken care to keep it as much as possible in that town alone. Although a good business is carried on on home account, the great bulk of it is done with foreigners. Great numbers of toys are constantly sent to Australia and New Zealand, the Cape, the United States, some portions of South America, India, and to the European continent. Indeed, it would be difficult to mention a country of any importance where European habits prevail to which consignments are not made. The competition of the French and Germans is not regarded as a matter of much importance, since their goods are of a rude, rough sort, when contrasted with those for which Wolverhampton has gained a world-wide reputation. These latter are of a most attractive description. They are light, finished in excellent style, and are painted in bright colors, and in the way which almost approaches the artistic. The tastes of the individual markets are carefully consulted, since toys which will suit one part of the world are not in fashion in another part, and so on. Prominent places among the articles are occupied by representations of the infantry and cavalry of nearly all nationalities, passenger and goods trains, with their attendant engines of English, Continental, and American type, carts and carriages of all descriptions, English and foreign, horses, cattle, and other animals. The goods are made principally out of tin plates, of which large quantities are consumed. The business in such times as those lately passed through requires a large amount of capital, since the keeping of the work people together involves very heavy stocking, for it must not be supposed that the tin toy industry, any more than other branches of business, is unaffected by waves of depression. At such times children, like their seniors, have, I suppose, to be content with fewer luxuries. Until about a month ago the operatives for nearly a twelvemonth were employed only four days a week, and at one period the stocks in the warehouse might have been reckoned at thousands of pounds sterling. Of late, however, trade has shown an improvement, the stock is now reduced to hundreds of pounds' worth, and the operatives are making full time. The increased demand is chiefly seen in the Australian and Cape trade. This industry is carried on by Sidney Cartwright, whose works are situated upon the Dudley Road.—*Ironmonger (London.)*

BYRON WESTON

DALTON, MASS., U.S.A.,

HAS BEEN AWARDED THE

GRAND PRIZE GOLD MEDAL

AND RECOMMENDED THE

Medal of Honor and Perfection

At PARIS, 1878,

This being the **HIGHEST** and **ONLY** AWARD given for

LINEN RECORD & LEDGER PAPER.

—A SPECIALTY.—

THIS Paper has received THE HIGHEST PREMIUM over all others from the Cincinnati Industrial Exhibition, Massachusetts Charitable Mechanics' Association, Franklin Institute of Philadelphia, Louisville Exposition, Medal and diploma from United States Centennial Commission, Medal of Progress American Institute, 1877, and Medal of Improvement and Progress, Boston, 1878. Its

PRINCIPAL ADVANTAGES

are as follows:—1. It contains more LINEN than any other Ledger Paper, has a longer fibre, and is, consequently, tougher. 2. Having a harder and better body, it frays less in erasure, so that by simply using the rubber after the eraser, the ink is prevented from spreading. 3. It is more uniform in Weight Color and Finish. 4. It never cockles if properly bound. 5. Its chemical action upon ink is such that it both writes and rules up better. For proof of the foregoing, refer to a large number of Stationers, Bookbinders, Bookkeepers, and Recorders, who have given it, after a severe test, the preference over all others. This paper is *Double Sized*, and will stand any climate or the most acid of fluid inks.

Send for sample sheet, ERASE and REWRITE FOUR TIMES on same spot. Each sheet is water-marked with name and date.

Correspondence.

CHICAGO NOTES.

[FROM OUR REGULAR CORRESPONDENT.]

WESTERN OFFICE LOCKWOOD PRESS, 18 LAKESIDE BUILDING, CHICAGO, ILL., Sept. 2, 1881. Trade is now healthily under way, and the impetus given to it during the phenomenal season past seems destined to carry it with a rush way on past the Christmas holidays.

Before chronicling Chicago, I will take the liberty of giving in full a recent trade letter from Keokuk. My correspondent says:

Thinking you would like to hear from this section, I will give you a few lines. Trade during the dull season which is about to close has been fair. If it were not for the three summer months, which are the dead ones, the bookseller would be much better off financially. Our schools open September 5, and dealers in school books will then have a rush, as the children all want a new book or two. Sam. C. Westcott, Brownell & Co., and D. G. Lowry, are all well stocked in school supplies. The school books, however, are sold at what might be called cost. There is little or no money to the retail dealer in this trade. I would be pleased to see all retail dealers quit handling books until the publishers could more fully appreciate their worth. I hope the late convention of booksellers will work good in the near future.

There has been no let up in the flow of gentlemanly representatives of Eastern manufacturers and jobbers. The latest arrivals have been P. G. Monroe, Western agent of the Lockwood Press; Albert E. Turner, of Cassell, Petter, Galpin & Co.; John R. Nagle, of Nagle & Co., who has an elegant line of blank books and memos which are second to none; Frank H. Coffin, of J. G. Shaw Blank Book Company; James G. Sloane, with Marcus Ward & Co.; Duvall F. Polk, of Houghton, Mifflin & Co.; Edward Weeks, of E. Claxton & Co.; Edward Harrison, of J. B. Lippincott & Co.; Emory Elmore, of H. H. Merriam, manufacturing stationery, Springfield, Mass.

Why does the Eagle Pencil Company furnish the dry goods trade, both wholesale and retail, with the automatic pencils in preference to the stationery trade? The legitimate trade—I refer to the booksellers and stationers—are unable to get these goods. This does not seem fair, yet I am told it is the case.

WESTERN.

Whether "Western's" information is or is not correct, the last assertion deserves attention from the trade, as it is not the first time I have heard the same thing hinted by correspondents in the trade.

The Sanford Manufacturing Company can certainly be relied on for a good mucilage. It claims 50 per cent. more gum in its mucilage than any other make, and I do not doubt that its claim is correct. Sanford's mucilage and Wade & Butcher's scissors are old and tried companions of my pen.

I regret to announce the death, on Sunday morning, August 23, at 8 o'clock, of L. M. Redington, brother to W. H. Redington, secretary of the Sanford Manufacturing Company, this city. The deceased was a chemist of more than ordinary skill, and in this capacity, as well as that of general factory superintendent, has served the same company for many years. By his death the Sanford Company loses an assistant not easily replaced, while in the social circles, of which he was an admired member, there remains a void not to be filled.

The Hotel World Publishing Company, of Chicago, has been organized. H. J. Bohn, Geo. H. Hanaford and W. T. Wood, incorporators. Capital stock, \$10,000.

George M. Hayes, manager of T. Sinclair & Son, was in Chicago the past week.

A folding machine, manufactured by Geo. E. Loyd & Co., of this city, is said to be having a marked success.

The following excellent description of Geo. H. Taylor & Co.'s latest enterprise is clipped from a local exchange:

A few weeks ago we announced that George H. Taylor had leased ground on Monroe street, between Clark and La Salle, where he intended to erect a new building, to be occupied partly by the firm of Geo. H. Taylor & Co., and the remainder to be rented by firms whose business was allied to theirs. Since then we have been given some details of the enterprise which will interest our readers. The building will be 90 by 190 feet on the ground, and six stories high above the basement, making the front elevation about 100 feet in height. The front will be of pressed brick, with cut stone trimmings. The windows will be of plate glass, the first story finished in show-window style, which gives a fine effect and will make the stores very attractive. A special feature of the building will be the abundant provisions made for admitting light to every part of it. The front will be like an immense window, with brick and marble frame, and a court on each side fifty feet in length, with windows for every story, will give light to each room, however the partitions may be arranged. These provisions have been made with a view to accommodating printers, bookbinders, and any other business requiring abundance of light. The proprietors intend to make their locality the headquarters for printers, stationers, and all the kindred branches of business—a centre round which will be gathered the great paper, printing, and publishing interests of Chicago and the surrounding country that looks to Chicago for its supplies. Several firms have already engaged quarters in the new building. The proprietors will occupy about two-thirds of the first floor and all the basement. A. J. Cox & Co. will take the sixth floor with the largest bookbindery in the country, and Donnelly, Gassette & Loyd will occupy the fifth. The intervening floors will be left without partitions or divided to suit tenants. The front entrance will be an imposing one, adapting it to use for offices,

should necessarily require it. In short, it will be seen from this sketch that Mr. Taylor will give to the city a building that will rank among the finest we have, giving the paper and publishing trades headquarters which they may point to with satisfaction and pride. Mr. Taylor's enterprise is one which reflects credit to our city and the trades, and will certainly commend him to their favorable notice.

A recent change made in the front of the store occupied by Dunwell & Ford and the American Tract Society makes a marked improvement in the locality. After silently working up one of the largest trades in the country for fine engraving and stationery goods, they now suddenly come forward with one of the neatest and most stylish stores in our city. It is only adding the cap to their "pyramid of style."

Baird & Dillon show among their latest importations a beautifully embossed folio edition of "Paradise Lost," illustrated—a handsome holiday book indeed.

Otway & Co., in a neat circular, which serves at once to illustrate their handsome type and clear, even work, call attention to their facilities for doing publishers' and other works at moderate prices.

Wm. L. Wilkinson, 6 Calhoun place, is offering to the fall trade some of the finest specimens of jewel cases and cuff, collar, glove and other boxes I have yet seen. They are finished inside and out in the most exquisite style. The leather is the finest Russia and Turkey, and the linings are of the most delicate tinted satins. Mr. Wilkinson offers his goods in competition, both as to price and quality, with those of any other manufacturer East or West. They are already commanding a ready sale. Dealers may find it to their advantage to write and get his prices.

My friend Taylor has recently returned from a very successful trip, on which he visited Racine, Milwaukee, Janesville, Beloit, La Crosse, Winona, St. Paul, and Minneapolis, spending Sunday at Lake Minnetonka. He placed the Livermore pen in every town he visited, and in St. Paul sold to every stationery house, wholesale and retail there, with one exception, the buyer being out of town. The day after Mr. Taylor's return to Chicago, the wanting order arrived, delighting his managerial heart. That is a sample of enterprise in a city and in an individual. Mr. Taylor kindly picked up for me en route the following items:

True S. White & Co., St. Paul, are going more largely than heretofore into the stationery business, making a specialty of the "Favorite" file. Mr. White's bitter revelations in the book trade at the recent Chicago convention, may be referred to as an explanation of this move.

H. Niedecken, Milwaukee, is now East buying a large stock of stationery specialties and staple

goods for the fall trade. Business good and promising with the house.

Mr. Moseley, of Moseley & Co., Madison, Wis., is now East replenishing his stock.

Taylor reports business brisk all over the Northwest, and especially in St. Paul, which is a "live" town anyway. G. B. H.

THE CHEMISTRY OF PIGMENTS FOR GLASS PAINTING.

Glass-painting, enamel-painting, porcelain or more comprehensively faience painting are those branches of the pictorial art which employ for their effects vitrifiable and vitrified colors, and are thus more or less essentially dependent upon chemistry. The materials of the colors employed in each of these arts, as they must endure the operation of fire, derived only from the mineral kingdom, are for the most part metallic oxides. The quality peculiar to most metallic oxides which enables them to sustain without great change or alteration the action of that most potent agent, caloric, long ago directed the attention of the artist to these substances. Only a relatively small number of coloring bodies can be employed, and yet notwithstanding this limitation, the palette of the enamel painter is quite as rich as that of the painter in oils, though the latter in the selection of his colors is not confined to the inorganic world, but derives a considerable part of them from the organic kingdom.

No one who duly considers the difficulties by overcoming which the artist achieves his work, can contemplate without admiration the striking and truly artistic products of enamel and porcelain painting. In choosing colors the artist cannot confide in the guidance of the eye, since the pigments mixed upon the palette and laid upon the object to be decorated, frequently have a tone very different from the tone they will have after burning. All this must be thoroughly understood by the artist, who must know in what proportion to mix the different coloring materials in order to attain the effect he designs.

Furthermore, the subject or article upon which the artist operates in rare cases only permits a free handling of the brush or pencil. In the manufacture of decorated faience ware the painting can be laid upon the rough vessels under the slightly fluid glazing, and at the same time he burned in over a slow fire. Here the hand of the artist is unfettered, and, at least, in the portrayal of forms, his genius may have full swing.

There are, however, but few metallic oxides which sustain the high temperature of the intense fire of the porcelain furnace without undergoing change. For painting porcelain, only the so called fire-proof colors are available. Many colored paintings must, therefore, be portrayed upon the polished glazing, and fixed there in the muffle of a feeble fire. Working upon so smooth a foundation, so polished a surface, the artist, it is manifest, is compelled to stipple rather than really to paint.

The adaptability of certain metals and metallic oxides to the art of painting on glass, enamel, and porcelain, they owe not only to their power of resisting fire, but partly also to their quality of being soluble in glass-paste, and of imparting to it a coloring more or less intense. Thus combinations of cobalt absorbed by glass tinge it blue, while combinations of chromium tinge it green. Preparations of manganese in small quantity color glass violet, and in larger proportion render it very dark or almost black.

The chemical composition of materials used to promote fusion usually has considerable influ-

ence upon the color of the glass. Thus, in alkaline glass or glass made from soda or potash and sand, the oxide of copper dissolved produces a blue color, while glass made from silicic acid or lime or nitre and sand receives from the same oxide a green tinge. In glass in which silicic acid and lead are ingredients, the so called crystal generally takes on a richer and more brilliant coloring than the other kinds; for that reason, and because they are able to dissolve metallic oxides in greater abundance and are of an easily fusible quality, they are extensively employed in the manufacture of enamel as well as in enamel painting.

The property of coloring glass paste is, however, not confined to the metallic oxides, to the combinations of the metals with oxygen. Under suitable conditions the metals themselves are dissolved in glass, to which they impart a particularly vivid coloring. That intensely red glass, always so highly valued, with clearly perceptible violet shade, scarcely distinguishable from the natural ruby, owes its color to a very small quantity of the solution of gold in its composition. Gold in the amount of the one-fifteenth-thousandth part suffices to produce a glass in thickish pieces wholly non-transparent, while gold in the proportion of the one-hundred-thousandth part presents a distinctly brilliant rose color. By means also of metallic copper, red glass can be produced, which is, however, inferior in intensity and beauty to that produced with gold.

Especially beautiful effects of color can be produced by dissolving at high temperature considerable quantities of metal or metallic oxide in the glass and then allowing the composition to cool slowly. Just as certain bodies dissolved in water at a high temperature are absorbed in large measure, and in gradual cooling are recovered in the forms of beautiful crystals, so varieties of glass are obtained having suspended in them substances separated from the crystallized or crystalline metals, especially metallic oxides or even salts and acids. All the opaque glasses, such as the milk-hued glass, the alabaster glass, and all the hematine and aventurine glasses are thus produced.

From the foregoing statements it appears that the coloring metals and metallic oxides cannot be well applied alone for the purpose of painting on glass, porcelain, etc., but that they must be mingled with substances, so called fluxes or means of promoting fusion, which, at a high temperature melting into the glass and dissolving, absorb the added metallic oxide, and thus bring into view the desired colors.

The nature of these fluxes is very diverse. The selection is first of all regulated or determined by the nature of the subject or object which is to be decorated with colors.

In every case the mixture of flux and pigment must be so easily fusible as to become more or less perfectly vitrified below the temperature at which the object to be painted loses form by softening. By which we mean that the fluxes or agents of fusion destined for pigments adapted to glass painting must be softer and more fusible than those which are applied to porcelain colors, as in the latter case the body to be painted can bear a very high degree of heat—much higher than glass.

The substances out of which fluxes are compounded are in quality the same out of which different kinds of glass are melted. Since, however, fusibility is here of the first importance, it is best to take for the composition less silica and more of the basic ingredients. To the latter belongs lead, which, applied in the form of red lead or of litharge, is especially esteemed, as it

is easily fusible and yields glass strongly refractory of light, and of extremely brilliant coloring. Instead of oxide of lead the oxide of bismuth is sometimes used with equal success. Besides the substances just named, soda must be added to the flux, and sometimes borax or salt-petre is a useful ingredient. The quality of fusibility is thus heightened, and besides, greater firmness or durability and a brighter color are obtained. The quantities or proportions in which silica, litharge, soda, borax, etc., are to be mingled, are, of course, determined and regulated with reference to the object aimed at. But whatever that may be, care must always be taken to rub the ingredients both of the flux and of the pigments with the muller upon a glass plate until they are changed into an impalpable powder. It is an indispensable condition of colors that, exposed in thin layers for a very short time to the temperature for which they are destined, they shall at once become vitrified. This condition, however, can be secured only when all the particles of the mass possess such a measure of tenderness that the liquescent alkali instantly dissolves them.

Chemistry at present recognizes about sixty-five elements, but the combinations of only ten of them are applicable as pigments for fusible colors. It might, therefore, seem as if the number of fusible colors were very small. If, however, we reflect that the various combinations of the ten elements can be used for the production of various colors; if we reflect, further, that one and the same pigment with differently compounded agents of fusion yields diverse tones of color; if, moreover, we reflect that by the mingling of many pigments new colors can be produced; and if, furthermore, we remember the fact that the manner of presenting or applying the pigment has a very decided influence upon the shading, we can perceive that the painter who uses vitrifiable pigments has at command a rich treasury of colors for the exercise of his art. —Translated from the last edition of Dr. Schmidt's Treatise.

COPPERING AND BRONZING ZINC.

The following recipes for coppering and bronzing zinc are said to produce excellent results: Prepare a solution of fifteen parts of blue vitriol and one of nineteen parts of cyanide of potassium; then mix both solutions together. Incorporate this liquid well with one hundred and sixty parts of pipe clay, and rub the resulting semi-fluid mass, by means of a linen rag, on the previously cleaned object. For bronzing, take fifteen parts of verdigris, nineteen of cream of tartar and thirty parts of crystallized soda; reduce them to powder and dissolve them in the necessary amount of water; mix this liquid together with one hundred and sixty parts of pipe clay and then proceed as above directed. Another process is as follows: Take fifteen grammes of blue vitriol, twenty of calcined soda, and mix them well with thirty-two cubic centimeters of glycerine, and mix the paste obtained with eighty grams of pipe clay. It is then ready to be applied as before stated.

MARKING INK.—Take nitrate of silver 11 grains, dissolve in 30 grains of aqua ammonia. Dissolve 20 grains of gum arabic in 85 grains (2½ teaspoons) of rain water. When the gum is dissolved, put in the same vial also 92 grains of carbonate of soda. When all are dissolved, mix the contents of both vials together and place the vial containing the mixture in a basin of water and boil several minutes, or until a black compound is the result. When cold it is ready for use.

OLD BERKSHIRE MILLS

DALTON, MASS., U. S. A.

One party writes: "The two hundred RECORD BOOKS, for 83 of the 99 Counties, now on exhibition at the Iowa State Fair, at Des Moines; and all, but four (!) of them, made from your 'OLD BERKSHIRE MILLS LINEN LEDGER,' Medium, 40lb., make a splendid show

[The above cut is a fac-simile of the wrapper used on the Linen Ledger Paper.]

L. PRANG & CO.'S

Christmas and New Year Cards

ANNOUNCEMENT.

WE hereby beg leave to announce to the trade the completion of our line of Christmas and New Year Cards for this season, for which our agents are now soliciting orders. The extent of our list, the originality, and especially the American character of our designs, together with the great care taken in their execution, will, we have no doubt, secure for our goods the popularity which they have enjoyed heretofore. The efforts we have made to secure the highest excellence, is attested by the names of some of the artists whose designs have been reproduced. We would only name Elihu Vedder, C. C. Coleman, Thomas Moran, Miss Rosina Emmett, Miss Dora Wheeler, Mrs. O. E. Whitney, W. H. Gibson, F. S. Church, R. G. Birch, &c. That a due regard has been paid for the quality of the literary matter, in connection with these designs, is shown by the fact that many of the designs are accompanied by original poems from writers of note, such as Mrs. Celia Thaxter and Mrs. Emily Shaw Forman.

The great increase of our manufacturing facilities, secured by additions to our building nearly doubling our floor space and by the adding of new machinery, will place us in a position to fill orders promptly. Still we would request dealers to place their orders as early as possible, so as to still further enable us to make timely preparation for prompt deliveries.

Our Cards will, as heretofore, be put up in envelopes containing twelve Cards, unless otherwise stated on our price lists.

We furnish envelopes without extra charge for all our Christmas and New Year Cards, for which the list price is \$1.80 per set, and over. Our silk-fringed Cards will no doubt be in great demand this season. We have made ample preparation to furnish these in time and have made arrangements with our manufacturers for the best quality of silk fringes. We would call special attention to the excellence of our fringed Cards and the novelties in colors and style of fringes we offer for this season.

A marked and attractive feature of our cards are the elegantly ornamented backs.

All our fringed Christmas and New Year Cards are furnished with envelopes and protectors, so as to insure safe transportation in the mails.

It will be impossible to embody our whole list in the space of the advertisement, and we will therefore merely give a general outline of the variety offered.

PRANG'S PRIZE CHRISTMAS CARDS.

COMPETITION OF 1881.

These are the Cards selected by the judges in the second competition for four designs of Christmas Cards, for which we offered \$2,000 in prizes of \$1,000, \$500, \$300 and \$200 respectively. At the recommendation of the judges, Messrs. COLEMAN, LAFARGE, and WHITE, the prize for third best Card was increased to \$500. Mrs. CELIA THAXTER has written appropriate verses for each of the designs.

- 1st Prize Card (\$1,000), by Elihu Vedder. Size, $6\frac{3}{4} \times 9$ inches; price \$1 each. Same card with silk fringe, cord and tassels, price \$1.50 each.
 2d Prize Card (\$500), by Miss Dora Wheeler. Size, 7×9 inches; price 75c. each. Same card with silk fringe, cord and tassels, price \$1.25 each.
 3d Prize Card (\$500), by C. C. Coleman. Size, 7×9 inches; price 75c. each. Same card with silk fringe, cord and tassels, price \$1.25 each.
 4th Prize Card (\$200), by Miss Rosina Emmett. Size, $5\frac{1}{4} \times 9\frac{1}{4}$ inches; price 60c. each. Same card with silk fringe, cord and tassels, price \$1 each.

The Prize Cards can also be had mounted on heavy board with gilt beveled edges.

We beg to call attention also to the following publications for New Year and Christmas:

- "Goddess Fortune" New Year Card, by Elihu Vedder. Size, $6\frac{3}{4} \times 8\frac{3}{4}$ inches; price 75c. each. Same card with silk fringe, cord and tassels, price \$1.25 each.
 "Christmas Dove." Size, $7 \times 9\frac{1}{4}$. This card is in the same style as the success of the last Easter season, the "Easter Dove" Price 60c. each. Same card with silk fringe, cord and tassels, price \$1 each.

Our Regular Line of Christmas Cards consists, among others, of the following Series:

- | | |
|---|--|
| Nos. 901, 902, 903, 906, 909, 910. Floral designs ranging in price from 20c. to \$1.20 per set of 12. | Nos. 920 and 929. Children's designs, at \$2.40 and \$3.60 per set. |
| Nos. 904, 905. Humorous Cat and Frog Designs, 60c. per set. | No. 922. Shells of Ocean, with figures, \$2.40 per set. |
| No. 907 is a new series of Horseshoe designs, 75c. per set. | No. 924. Fans with silk fringes, \$3 per set. |
| | No. 933. Bric-à-Brac designs, very rich, \$6 per set, and many others. |
- We offer a similar assortment of New Year Cards, but would call special attention to No. 1329, a new folding calendar, at \$2.40 per set. Most of the Numbers can be had with silk fringes ranging in price from \$2.25 to \$12 per set. Stock will be ready for delivery September 15.
- Besides the above, attention is called to our New Birthday Cards, Scripture Texts Cards, New Panels, New Water Colors, by Thomas Moran, and other publications. Our line of Thanksgiving Day Cards will also be shown by our agents.

POSTAL STATISTICS OF GREAT BRITAIN.

The British Postmaster General has just issued the twenty-seventh annual report of the working of the department, from which we gather that the number of letters delivered in the United Kingdom during the twelve months was 1,176,423,606, showing an increase of 4.3 per cent.; the number of post cards, 122,884,000, an increase of 7.4 per cent.; the number of book packets and circulars, 248,881,600, an increase of 16.3 per cent.; and the number of newspapers, 133,796,100, an increase of 2.5 per cent. There is a marked increase in the registered letters, the number recorded being 10,033,546, against 8,739,191 of the previous year, or an increase of 14.8 per cent. No less than 137 new sub-offices have been opened, raising the total number of such establishments to 13,637, which, with 912 head offices, makes the grand total of post offices 14,549. About 620 letter boxes have been added, and the number of receptacles of all sorts for letters may be stated at 27,709. The morning delivery of letters in the suburban districts has been considerably accelerated, with a view to the convenience of those whose daily business requires their early attendance in London. New mails to and from the metropolis have been established, and the packet communication with the Channel Islands has been improved.

Eight hundred officers have been added to the force, which on the 31st of December last had reached a total, including all grades, of over 47,000 persons, of whom over 2,000 are women.

It is stated that, during the Christmas week, more than 11½ millions of letters and packets, over and above the ordinary correspondence, and four tons of extra registered letters, representing a total postage of nearly £58,000, passed through the central office.

Over 5,300,000 letters were dealt with in the Returned Letter Office, 475,000 of which it was found impossible to deliver or return. One contained a bank note for £100, still unclaimed, and attached to the seal of another was a sovereign, which was returned to the owner, who had forgotten to remove it. In addition to the letters, about half a million of post cards, four millions of book packets and 400,000 newspapers found their way to the same office. More than 27,000 letters, an increase of 3,000 over last year, were posted without any address whatever; 5,000 furnished no clue to the name of the sender, and 1,340 contained articles of value to the amount of nearly £5,000. The use of too fragile covers occasioned the escape of some 30,000 articles, and no doubt entailed much disappointment. The return of a letter, posted without an address, to a firm whose direction appeared within, led to the discovery of a systematic robbery of goods and the apprehension of the offenders. At Hull an incident occurred proving the elasticity of the postal organization under heavy pressure. The distribution of nearly 300,000 circulars, weighing twenty tons, issued by a single company, and representing £2,380 worth of postage, was effected without confusion or delay in forty-eight hours. The despatch necessitated the employment of seven extra railway vans, and it is believed that all the documents duly reached their destination.

—Paper and Print.

Aluminum is a finer and better material for telegraph wires than iron, and as a conductor is twice as good. It is very expensive however, but it is lately found that a better wire can be made of an alloy of aluminum and iron, which does not cost so much and is a better conducting medium.

NEW YORK OFFICE AND SALESROOM, 18 MURRAY STREET.

THE BAY STATE PAPER COMPANY,

HOLYOKE, MASS.,

were among the pioneers in the W. C. Paper trade, and their goods, from the start, were distinguished for their fine quality and the superior style in which they were wrapped. Their example has been approved and imitated by a swarm of competitors, who have flooded the market with inferior goods, put up in packages of 600 to 800 sheets, misleading the unwary, and sold at apparently lower figures; but the trade and consumers generally recognize the fact that a good article, honestly put up, in 1,000 sheet packages, is the most profitable both for use and for sale. Their goods are all guaranteed 1,000 sheets to package, and no short count. No wood is used in any of these papers, but they are made of the very best stock in the market.

THE "MEDICATED BOUDOIR" BRAND

Has no equal for weight, strength, softness, and color, and commands the front place with "fine retail trade." Present reduced quotations furnished on application.

The attention of the trade is directed to our Fine Manilla Writing Papers and Copying Books. A comparison in price and quality with other goods will convince any purchaser that it will pay to buy of us. Samples and prices on application.

TRADE ONLY.

The American News Company,

NEW YORK.

Trade Gossip.

All new goods and designs which are not, strictly speaking, "Novelties" will be noticed under this head. The trade are requested to forward descriptions with samples in order to secure proper notice.

The *Tribune*, of Traverse City, Mich., has suspended.

Angell, Hammett & Co., printers, Providence, R. I., have failed.

Shanley & Co., stationers, &c., Deer Lodge, Montana, have dissolved partnership.

Alfred Barlow & Co., paper stock dealers, Boston, Mass., have been burned out. Insured.

F. W. Krummel, Sr., of Krummel & Jordan, booksellers and stationers, Palmyra, Mo., is dead.

E. B. Young's interest in the firm of Newson, Curry & Co., stationers, &c., Baltimore, Md., has expired.

Ackerman Brothers, wholesale dealers in fancy goods, San Francisco, Cal., have been partly burned out. Insured.

Another new embarkation in Christmas and New Year's cards. See McCarty & Hasberg's advertisement in another column.

Chas. Robson & Co., publishers and booksellers, Philadelphia, Pa., have dissolved partnership. Charles Robson continues under same style.

The firm of George A. Searcy & Co., booksellers and stationers, Tuscaloosa, Ala., has been dissolved by the withdrawal of Geo. A. Searcy.

The firm of William Bowman & Son, paper stock dealers, Baltimore, Md., has been dissolved by the death of William Bowman. William E. and Mary Bowman will continue under the same style.

F. G. Hancock, the enterprising stationer, of Atlanta, Ga., reports that business during July and August has been excellent and nearly double that of last year. He also says that trade prospects are good.

Edmund McLoughlin, Jr., of McLoughlin Brothers, is in the Adirondack Mountains. He is accompanied by a large party of friends, who intend to camp out for several weeks near the fishing and hunting grounds of that famous resort. They have the best and latest appliances to assist them in their sport.

Notwithstanding that A. H. Goetting has recently increased his manufacturing facilities and is importing largely, he is so rushed with orders that they are accumulating on his hands. The stock in his warehouses is not only fast disappearing, but many of the showcases are empty, which is a sure indication of the strain made upon him.

Attention is called to the advertisement of the Washington Pen Company, which is the opening gun of a new and vigorous campaign on the part of this pioneer American steel pen manufacturing company now under the general management of Mr. Granger, who was the originator of the pens from which the company derives its name. It is claimed that these pens are entitled to the distinction of having been the first successful American steel pens. It is believed that the high reputation, great popularity and extensive sales these pens achieved a quarter of a century ago, was warranted by their excellence. It is to be hoped that the company under the resumed management of its originator will meet with all of the success it deserves.

McLoughlin Brothers have just published an entirely new edition, enlarged and improved, of each of the following series of toy books: Peter Prim's Series, which consists of little stories, showing the wonderful mishaps of naughty children, written in simple language, and well calculated to impress children with the evil of wrong doing. The Fairy Moonbeam Series consists of little fairy stories that have been household joys for several generations. The Susie Sunshine Series contains bright little stories of great simplicity and beauty, with possible and impossible incidents transformed into childish wonders. The Slovenly Peter's Series consists of moral stories in rhymes which are adapted to arouse the better nature of the child, and inculcate the love of right and virtue. There are six kinds in each series and each book contains eight excellent half-page illustrations, has a pictorial cover and retails at five cents. The books are put up assorted in two-dozen packages.

G. W. Leman & Brother are now prepared to supply the numerous demands for Underwood's new cobalt ink, which is said to be a first quality article, appreciated by all who have given it a trial. It gives an instantaneous, clear and distinct mark, which seems to characterize it. A trial, it is said, will insure an immediate order, and be a guaranty of satisfaction to the writing public in general. Cheap pens are still in demand, and their stock of Harrison & Bradford's has dwindled down to from 50 to 75 gross of each favorite shape. Orders should be sent in immediately to insure speedy delivery of these small lots.

James D. Whitmore & Co. show a leading line in leather fancy goods this season far surpassing all their former efforts. The plush odors, collar and cuff, several and combination boxes, are particularly attractive. Alligator pocket books, letter and card cases, now so extensively used, can also be had in great variety and at very reasonable prices.

Henry Levy & Son show some rare specimens of chinaware, both in costly and cheap goods. They also show in the most approved styles a line of smokers' tables, smokers' stands and dressing cases. Among other things shown are a line of satin covered whisk brooms and sachets.

Obpacher Brothers have added several new designs to their fancy card stock, and report that the full line is meeting with great success. The firm requests the trade interested in this line to not complete their stock before seeing these goods.

Geo. J. Atkins has retired from the Columbia Photo-Engraving Co., New York city. The business is now conducted by Martin H. Galvin and Alexander F. W. Leslie.

The new gold frames which E. & H. T. Anthony recently introduced are meeting with great success. The trade should see them.

Simon David & Son, paper stock dealers, Louisville, Ky., have been burned out. Insured.

The stock of Hart & Co., dealers in notions, Mattoon, Ill., has been attached.

Nicholi & Nuding, publishers, Washington, Ill., have sold out.

H. C. Salisbury, printer, Phelps, N. Y., has sold out.

J. D. Wooley, stationer, &c., Deadwood, Dakota, has failed.

S. W. Hawkins, publisher, Covington, Ga., has been burned out. Fully insured.

Weisenberger & Porter, publishers of the *Republican*, Truckee, Cal., have sold out.

Z. Shedd, dealer in notions, Fremont, Neb., is closing out.

John Vance, fancy goods dealer, Bridgeport, Conn., is dead.

A. C. Matthews, publisher of the *Citizen*, Des Arc, Ark., has suspended.

D. B. Maguarre, stationer, North Vernon, Ind., has sold out to W. M. Campbell.

W. S. Furay, of Furay & Gale, publishers of the *Sunday Herald*, Columbus, O., has sold out.

H. M. Converse, printer, Easthampton, Mass., has sold out.

D. P. Burnham, stationer, &c., Deadwood, Dakota, has sold out.

L. M. Dewey, newsdealer and stationer, Plano, Texas, has been burned out.

Schwab & Heidet, dealers in fancy goods, Oakland, Cal., have dissolved partnership.

Turner & Cox, publishers of the *East Oregonian*, Pendleton, Oregon, have dissolved partnership.

The attention of the trade is invited to an advertisement of McCarty & Hasberg in another column.

Bengough, Moore & Co., printers and publishers, Toronto, Ont., have dissolved partnership. A. Richardson retires.

A. Weidmann & Co. are now very busy, and any one wanting a great variety in the toy line should visit or communicate with the house.

C. E. Gilbert, publisher of the *Reporter*, Abilene, Texas, has been burned out. Insured for \$900.

Mr. McClintock, of the firm of Gosper & McClintock, publishers of the *Herald*, Phoenix, Arizona, is dead.

C. N. Dickey & Co., stationers, &c., Marysville, Cal., have dissolved partnership; A. Abbott continues under same style.

The *Evening Star* Company, publishers of the *Evening Star*, Kansas City, Mo., has been incorporated. Capital stock \$50,000.

J. B. Lippincott & Co.'s September bulletin of new publications is now ready for distribution.

J. H. Hamburger has returned from Europe, where he has been for the past three months securing novelties which he will soon place on the market. The house reports business very lively in all the lines it handles.

The trade in small pictures, which for a long time was thought to have died out, has again suddenly revived, and the demand for the better class of such pictures never was so good. J. H. Hamburger is doing an immense business in these goods and has a stock from which the most beautiful selections can be made.

E. G. Locke, who for several years was with Charles Beck, of Philadelphia, has opened in that city a store, under the name of E. G. Locke & Co. The principal business of the new firm is wholesaling glazed and fancy papers, chromo cards, paper laces, cards and cardboards. Its beginning is said to be very encouraging, as it has already received quite a number of large orders. Mr. Locke is very popular in the trade.

J. P. Dinsmore, of the well known firm of Carter, Dinsmore & Co., the manufacturers of the celebrated inks bearing their name, when last heard from, was aground on a sand bar in the Mississippi River, which caused him a delay of about forty-eight hours before he was again floated off. He is said to be now working Eastward, and, if troubled with no more bars, it is thought, may ultimately reach there. He

ought to carry along ink enough to float him through.

Felix Loeb, dealer in notions, Louisville, Ky., has removed to Custer.

Thomas C. Lewis, dealer in notions, Portsmouth, O., is closing out.

Thomas Walsh & Co., printers, Galveston, Texas, have dissolved partnership.

C. C. White, dealer in paper, &c., this city, can now be found at 151 Chambers street.

Geo. Bengough has retired from the firm of Bengough Brothers, publishers and printers, Toronto, Ont.

C. W. Fontaine, publisher of the *Somerset Herald*, Princess Anne, Md., has been burned out. Insured.

James T. Roberts, representing the Artistic Stationery Company, London, has been in town during the past week.

The Eagle Paper Mill, belonging to H. A. Frambach, Kaukauna, Wis., was burned on Friday last. Loss reported at \$100,000.

Among the visiting members of the trade in the city this week were Herman L. Schreiner, Savannah, Ga.; B. J. Kopperl, Austin, Tex., and Zenos Warren, Springfield.

Among the passengers by the Bothnia from Liverpool, which arrived on Wednesday, were John Walter of the *London Times*, George Jones of the *New York Times*, and Augustine Smith, of Campbell, Smith & Co., this city.

The manilla writing paper lately put on the market by A. C. Farley & Co., of Philadelphia, is said to be having a large sale for the reason that the quality is remarkably good, and the price is in marked contrast with that of other manufacturers.

The third match at base ball between the Beekman and Duane Street nines was played at the Union Grounds, Brooklyn, on last Saturday afternoon, and resulted in a victory for the Duane Street nine by a score of 20 to 10. This result is due to good catching and pitching, as well as excellent work at the bat.

Jos. Garcia and W. A. Fauche have formed a copartnership, under the style of Garcia & Fauche, for the transaction of a general commercial stationery business in all of its branches and the manufacture of blank books, at 56 Camp street, New Orleans. Both members of the firm have had several years' experience in the trade.

Some correspondence has taken place recently between several envelope manufacturers, looking to a further advance in the prices of some grades of envelopes. It is said that the scale of prices adopted by the manufacturers a few weeks ago is being lived up to in good faith, but many complain that there is no margin on some kinds at present prices.

R. W. Peach, who was with B. & P. Lawrence, of this city, for seventeen years, now represents, at 65 Liberty street, this city, P. Lawrence and Lawrence Brothers of London, England. Mr. Lawrence does an export and commission stationery business, and is also the sole agent in the United States for Eugene Rimmel's general line of perfumery and fancy soaps.

The heat was so intense on Wednesday in Samuel Raynor & Co.'s envelope factory, that their employees were unable to proceed with their work, whereupon Mr. Raynor, with a liberality of spirit which is to be commended, directed his foreman to dismiss the hands for the afternoon, and to send them to Coney Island at the expense of the firm.

TO RETAIN BROKEN OIL STONE.—Dissolve in glass in the smallest possible quantity of proof spirit by the aid of gentle heat (over a water bath). In two ounces of this dissolve 10 grams of gum ammoniacum; triturate to effect solution, then add half a drachm of gum mastic dissolved in 3 drachms of rectified spirit. Stir well and keep stopped when not in use. Liquefy by gentle heat when required for use. Clean the stone with hot potash lye, rinse thoroughly and dry before cementing.

THE STATIONER.

DEVOTED TO THE INTERESTS OF THE

Stationery and Fancy Goods Trades.
WEEKLY--\$2.00 PER ANNUM.

Single Copies - - - - 10 Cents.

NEW YORK, THURSDAY, SEPTEMBER 8, 1881.

Advertisements cannot be received for insertion in the current week later than 12 M. on Wednesday. The charge for advertising is 25 cents a line, each insertion. Special terms for standing and displayed advertisements to be had on application.

This journal aims to be a medium of information for and a representative of the interests of every one connected with the stationery and fancy goods trades. It contains a full and trustworthy survey of the market for stationery in this country, in all cases giving the actual prices at which goods can be bought of importers and jobbers in this city, together with a detailed account of novelties in the trade, patents relating to stationery, and current items of interest. A review of foreign markets and accounts of movements abroad will also be furnished, and no pains will be spared to make THE STATIONER a thorough and complete exponent of the trade.

Subscription and postage for Great Britain, per annum..... 12s.
Any information our readers may wish to obtain shall be cheerfully given, and prompt replies will be made to all inquiries addressed to us on any subjects of interest to the trade.

Communications on all trade matters are earnestly solicited. Address

Subscribers to THE STATIONER can be supplied with the best cloth binder in the market. Deliverable at the publication office. Price, fifty cents.

Readers of this paper who avail themselves of the information obtained from its columns, by advertisement or otherwise, are requested to notify their correspondents of the source of their information.

TO-DAY the people of the Empire State unite in invoking God's blessing for the President. May the invocation not be in vain!

AUTUMN is loath to part with summer. Perhaps the hottest days of this year have been those of this week. During yesterday, at this office, the thermometer marked 100° in the shade, and at various points about town the record was 99° in the coolest places to be found on the streets. We condole—feelingly—with suffering humanity.

BUSINESS, notwithstanding the intemperate heat, is actively prosecuted. Many places are kept open until late at night to meet the emergencies of trade. The demand for goods is well sustained, and the trade generally are concurrent in the opinion that the summer has shown exceptionally favorable results, while the prospects are satisfactory to the last degree. In all respects the season seems to be more profitable than was expected. These gratifying assurances ought to be sustained, and it devolves upon the business men of the country, whose interests are so largely opposed to speculative influences, to pursue a conservative and careful course, which helps to postpone if not avert any change in the commercial situation.

AN advance in the prices of envelopes is mooted. We learn from our reports to-day that manufacturers are considering the propriety of making higher quotations on certain lines. This is all right, if the proposition is not carried to extremes and the market forced so as to end in a general break-up and conflict between the envelope makers. The trade should remember past experiences and not try to go too far. Buyers also should not get excited over the report of higher quotations. Excitements lead to blunders. If the demand from consumers really warrants an advance, it can be easily gained, and purchasers ought to be sufficiently conversant with the wants of the locality where they do business to determine whether they are justified in buying on a prospective rise, or whether they can afford to order goods as they want them, no matter what the price may be. It is to the last degree demoralizing for manufacturers to sell largely at an advance, and then to cut under prices before stocks are worked off. It would seem almost superfluous to suggest this; but we have had it happen, followed by a reaction that was worse than keeping prices steady even at low margins. Yet it is not improbable that such a thing would be repeated again and again.

ANSWERS TO CORRESPONDENTS.

J. A. G. wants address (1) of Pearlman Paper Manufacturing Company, and (2) of any firm in New York that manufactures wax paper.

Ans.—1. We do not know of any such concern. 2. S. Hammerslag, 52 Day street, and Regenhart, Shevill & Co., 46 Day street.

Inquirer says: Can you tell me if writing parchment is made in the United States? Hitherto, this arti-

cle has invariably been imported from England, but rumor states it is now being made here.

Ans.—We cannot tell whether parchment for writing on is made in this country. It ought to be.

W. G. B. wants to know who makes a file hook which screws into a desk, shelf, &c.

Ans.—We cannot find any hook in the market of the exact pattern of the drawing sent us, but are told it can be made to order. The nearest thing to it is the ordinary steel screw-hook, which is sold by hardware stores generally. This comes in different sizes, and we think might serve the purpose.

The marriage of William C. Horn, of Koch Sons & Co., this city, to Isabel, daughter of Henry M. Benedict, of Brooklyn, was solemnized last evening at the Clinton Avenue Congregational Church, Brooklyn, and was witnessed by a number of his friends in the stationery trade. The bride is the daughter of an old and prominent resident of Brooklyn, is endowed with beauty, and possesses many accomplishments. The happy couple, after spending their honeymoon in a visit to the West, will return and settle down in their beautiful residence in Brooklyn, which Mr. Horn recently purchased and furnished throughout in good taste. Mr. Horn has a host of friends throughout the country in the stationery trade, who will congratulate him on this important event. THE STATIONER wishes the newly wedded couple much joy and many years of bliss.

J. B. Lippincott & Co. have just issued their new illustrated catalogue of foreign and American stationery. This very valuable book gives full information as to the quality, size and price of every description of staple and fancy stationery goods. New articles are illustrated with very good engravings, which enables customers to give their orders without seeing the samples. The catalogue is one of the most complete and interesting books of the kind, and the trade are invited to send for it.

Langfeld, Turner & Andrews, Philadelphia, report trade as being very good. Last year was a remarkably good one for them, but it is said that their sales this year will be fully 25 per cent. larger. Their greatest difficulty is to manufacture fast enough to meet the demand. The trade will do well to send in their orders at as early a date as possible if they wish to get them filled in good time.

OBITUARY.

THE LATE JOHN LEWIS.

In response to a call from Thomas Groom & Co., the stationers of Boston met at the firm's store on September 1, at ten o'clock, to take action in regard to the death of their late associate, John Lewis, of the firm of Hooper, Lewis & Co. The meeting was called to order by C. A. Cutting, of Thomas Groom & Co., and the following remarks were made by him:

GENTLEMEN—We have taken it upon ourselves to ask your presence at this time to take suitable action arising from the decease of our late friend, John Lewis, of the firm of Hooper, Lewis & Co., of this city. It is well sometimes for business men to pause and reflect. The days, weeks, months and years pass us in such rapid succession that we are almost unconscious of the lapse of time, until some event like the present causes us to stop and remember that there is a limit to our powers, that we are in fact mortal, and that time with us will cease to be. This fact is always brought home to us when an associate drops out by the way. I first knew our late friend in the spring of 1845. He was then a young man in the employ of the firm of Benjamin Loring & Co., at No. 120 State street, and he seemed to me at that time the embodiment of youthful vigor and manly beauty, giving the promise of a long and useful life. He continued for many years with that firm as clerk, and as partner with its successors to the present time—a representative man of a representative house in the stationery trade, an active, busy life of about fifty years. We know that a man is right when he always commands the esteem, respect and affections of his associates, which we believe was strictly true in his case. He was a man remarkable for attention to business and being always at his post, his only sickness during these years being his last. Called now, in the fullness of his powers, from his family and business associates to "that bourne from whence no traveler returns," we have met to recognize the hand of God in the dispensation of his Providence and as business associates to take suitable action on the occasion that has brought us together.

On motion of E. E. Clark, Mr. Cutting was chosen chairman of the meeting; and, on motion of the same gentleman, I. L. Kidder, of the Cutter Tower Company, was chosen secretary.

Remarks were made by E. E. Clark; Mr. Gay, of the firm of A. R. Gay & Co.; Mr. Tucker, of J. L. Fairbanks & Co.; J. M. Whittemore, and the secretary.

On motion of Mr. Clark, a committee of three, consisting of the chairman, secretary and Mr. Tucker, were chosen to draw up resolutions for the adoption of the meeting, and the following was submitted:

Whereas, God in His providence has seen fit to remove our late esteemed associate by the hand of death, we desire to place upon record our appreciation of his character as a man and merchant and of our loss of a friend and business associate.

Voted, That we will close our places of business to-morrow (Friday, September 2), from 1:30 to 3 o'clock, to attend the funeral services.

Voted, That the secretary forward a copy of these resolutions to the family of the deceased, and publish the same in the daily papers.

The above were unanimously adopted, and on motion of Mr. Clark the meeting adjourned.

Henry Bainbridge & Co. have just brought out their daily memorandum calendar for 1882. It is a great improvement in design and finish on the one they brought out last year. Their stock of these calendars is sufficiently large to enable them to execute heavy orders. It is such a convenient article that it ought to be on the desk of every business man, as well as used by every person making an appointment which he desires to have a memorandum of in such a convenient manner as not to escape his notice.

POSTAL SAVINGS BANKS.

The success and popularity of postal savings banks in those European countries where the system has been introduced has encouraged a movement in Germany, Austria and Switzerland to adopt it also, and there are some who advocate its establishment here. While there can be no doubt that it has largely encouraged thrift among the poorer classes in France, and there is every indication of its doing good work in England, it must not be forgotten that there it is little more than an extension of a system already established. In France and in England the state has hitherto been the custodian of the savings funds, and the employment of post office officials as collectors of smaller amounts is only a further step in extending facilities to small investors. In France, the deposits in savings banks go to a central bank under state management, and in England the savings take a similar course. It is radically different in other countries, where the question whether the establishment of the postal savings banks system would or would not seriously interfere with the business of existing institutions is being agitated. As in this country, the ordinary savings banks manage their business independently of the state. Under certain restrictions their officers receive and reinvest the savings confided to their care, and, besides wielding considerable local influence, generally do a profitable business. Believing that they would lose a large number of their depositors if the state were to interfere, they strenuously oppose any movement in that direction. It is urged, on the other hand, that in some countries, as in Austria, the private savings banks, being chiefly located in the centres of population, do not at all reach the poorer classes whom it is proposed to benefit, and that, therefore, their business will suffer little, if at all. The number of improvident people in those countries, where peasants and laborers are less self-reliant, is very great. They are accustomed to look to the state and to the government authorities with trust and implicit faith. They are too ignorant to be able to take care of their own affairs, and too suspicious to trust their management to what they believe to be irresponsible persons. In such countries the postal savings bank system must prove a great blessing, but it is doubtful whether the need for it is urgent where the average business intelligence of the people is as high as in this country.

McCarthy & Hasberg, New York, are exhibiting a magnificent line of goods in their ware-rooms. Among the things shown are Christmas card cases in satin, russia, and calf and in plush, plain and embroidered. This is an entire new line of goods, which were designed by the house, and they are offered at prices to suit all classes of purchasers. In portfolios there is a large variety shown, among them being a beautiful line of hand-painted goods, one style of which deserves special mention; it represents seven canary birds around a music stand, with an umbrella over them. In plush goods there is an immense variety, consisting principally of novelties and patterns designed by the firm. The line of albums is one of the finest shown in the market. These goods come in plush, calf and russia, decorated with fine paintings and embroidery; one of the designs having been secured at a sacrifice is offered at \$8.50 per dozen, but is said to be really worth \$15. In leather goods the line is very large and includes novelties from all parts of Europe. In inkstands over one hundred styles are shown, most of which are controlled by the firm. Among them is an en-

tire new line of canary colored Bohemian inkstands, plain and painted, many of them being novelties. The firm has opened a curio and antique room, in which rare specimens of art from all parts of the world are shown. Considerable expense has attended the fitting up of this room, and to see see it is worth a special visit. All are invited to call, whether purchasers or not.

W. I. Martin, of Samuel Raynor & Co., has just received a letter from Charles Harris Phelps, who was formerly attorney for the Stationers' Board of Trade, and who did much to give it a start, stating that he is now traveling around the world with his wife. He has spent over a year in China and Japan, and both he and his wife have learned these languages, and have traveled far into the interior of those countries, where Europeans seldom visit. Mr. Phelps is now in India, visiting all of the important cities of that country, and has collected a large number of photographs of the various cities he has visited. His many friends may have an opportunity of hearing him before the Historical Society on his return to New York next year.

Market Review.

OFFICE OF THE AMERICAN STATIONER,
WEDNESDAY, September 7, 1881.

THE MONEY MARKET.—The rates for money are 5½ per cent., with exceptional instances of both higher and lower rates temporarily. Stocks continue dull, and prices generally are weak. It is what is called a broker's market—that is, the dealings are largely confined to small sales among the brokers and curbstone operators, there being a conspicuous absence of heavy dealers, while the outside orders are a mere bagatelle of what they usually are in periods of activity and buoyancy. Government bonds are strong for long date issues, while railway mortgages are dull and irregular. Sterling has advanced one-half cent per pound, while Continental bills remain as before, with the market generally quiet. The posted rates for prime bankers' sterling are \$1 80½@4.81 and \$1 84½. The actual rates are \$1 80@4.80½ and \$1 83½@4.83½. Cable transfers sell at \$1 84½@4.84½ and prime commercial bills at \$1 78½@4.78½. At these rates the market for sterling is dull but steady.

THE PAPER MARKET.—The same encouraging features which have characterized the condition of the market for several weeks still prevail. Even before manufacturers were much troubled on account of short water, the production was not very much beyond consumptive wants, and now that the complaint of the drought has become quite general in the West as well as at the East, there is actually getting to be a scarcity of some grades of paper; for instance, of straw wrappings, which are now gaining a steadier position in the market. Although manilla papers have maintained quite a regularity in price for some time past there is a strong tendency toward an advance. We are told by some of our city manilla paper dealers that they have some difficulty in getting their orders placed at the mills, most of them being so actively engaged. Prices of medium grade book papers are firmly maintained, and some of the publishers have recently placed orders at full prices. The demand for news keeps up very full, and prices are very well sustained. We hear of nothing even of the most ordinary quality selling below 6½c.

THE STATIONERY MARKET.—Notwithstanding that the excessively hot weather during most of this week has been some drawback to trade, with very few exceptions most of our city houses report a fairly active business in progress. Orders by mail now form the most of the business doing, with here and there an out-of-town buyer ordering. The fancy goods dealers are also doing an active trade, and nothing of a discouraging character is heard in any direction. A number of salesmen, representing various staple stationery houses, left the city this week on their annual fall trips to different parts of the country. There is some talk of a further advance in prices on certain grades of envelopes, otherwise prices remain steady and generally firm.

A. J. HOLMAN & CO.'S Revised New Testament, Illustrated

OVER ONE HUNDRED ENGRAVINGS.

The finest and best 8vo. Edition published, also 32mo., 16mo., Pica 8vo., and Demy 8vo., equal to the English Editions, and at much lower prices.

Strong bindings, handsomer styles, lower prices than the flimsy foreign goods. Vellum Cloth, Guard Joints, and patent Chain-Back Bindings, for Cabinet and Cartes de Visite Pictures, adapted to the best retail trade. New Catalogues mailed on application.

A. J. HOLMAN & CO., American Bible Warehouse, ARCH ST., PHILADELPHIA.

STAFFORD'S UNIVERSAL WRITING INK!

A PERFECT BLACK WRITING FLUID.

It contains no gum, and flows very freely, making a smooth, even mark.

It positively will not corrode Steel Pens.

Writes darker than any known ink, and turns at once jet black.

Being a perfect chemical solution, it cannot thicken or deposit a sediment.

Never moulds in any climate. Freezing does not injure it.

Never changes in color or consistency while in use in the inkstand.

Resists Acids. Is more permanent than any other ink.

It will be found more economical than any other ink, as it can be used to the last drop.

One of the most valuable and remarkable features of this Ink is the extreme rapidity with which it dries on the paper, it being seldom necessary to use a blotter. This quality should recommend it to bookkeepers.

In the United States, this Ink has completely superseded the old fashioned pale black inks, and has to a great extent taken the place of the faint green writing fluids.

Mr. J. ADEE HEPSWITH, the eminent English Chemist, says :

"I find S. S. Stafford's Universal Ink to be proof against all acids; and, from my knowledge of its ingredients, I believe it to be the most permanent ink in existence, as it cannot rust out like other inks that are prepared from galls and iron. As it seems to be entirely free from any tendency to thicken or corrode steel pens, and is BLACK AT ONCE, I cannot but regard its invention as a valuable discovery."

S. S. STAFFORD, Chemist, No. 218 PEARL STREET, NEW YORK.

THE DE LA RUE CHRISTMAS AND NEW YEAR CARDS.

PRICES GUARANTEED.

THE SATIN AND MANUFACTURED SATIN SERIES A SPECIALTY.

MYERS BROTHERS, Direct Importers, 62 John St., New York.

WE HAVE THE LARGEST VARIETY OF THESE CARDS IN THE UNITED STATES.

Also Manufacturers of a Large, Handsome and Varied Assortment of Cabinet Papeteries, from \$4.20 to \$72 Per Dozen.

SCHOOL BAGS.

"UNPARALLELED," and "O. W. BUSYBODY."

They are the best and cheapest in the market. Made in uniform shape by pressure, or flexible without pressure, as the buyers desire them. Warranted without starch.

An allowance of 10 per cent. cheaper than heretofore. Also, I offer the trade all kinds of SLATE goods at LOW prices.

"THE GREAT ROCK ISLAND ROUTE"

Calls your attention to the following REASONS WHY, if about to make a Journey to the GREAT WEST, you should travel over it:

As nearly absolute safety as is possible to be attained. Sure connections in UNION DEPOTS, at all important points. No change of cars between CHICAGO, KANSAS CITY, LEAVENWORTH, ATCHISON or COUNCIL BLUFFS. Quick journeys because carried on Fast Express Trains. Day cars that are not only artistically decorated, but furnished with seats that admit of ease and comfort. Sleeping cars that permit quiet rest in home-like beds. Dining cars that are used only for eating purposes, and in which the best of meals are served for the reasonable sum of seventy-five cents each. A journey that furnishes the finest views of the fertile farms and pretty cities of Illinois, Iowa and Missouri, and is afterwards remembered as one of the pleasant incidents of life. You arrive at destination rested, not weary; clean, not dirty; calm, not angry. In brief, you get the maximum of comfort at a minimum of cost.

That the unremitting care of the Chicago, Rock Island & Pacific Railway for the comfort of its patrons is appreciated, is attested by its constantly increasing business, and the fact that it is the favorite route with delegates and visitors to the great assemblages, political, religious, educational and benevolent, that assemble from time to time in the great cities of the United States, as well as tourists who seek the pleasantest lines of travel while en route to behold the wonderful scenes of Colorado, the Yellowstone and Yosemite. To accommodate those who desire to visit Colorado for health, pleasure or business, in the most auspicious time of the year, the Summer season and months of September and October, the Company every year puts on sale, May 1st, at all coupon ticket offices in the United States and Canada, round trip tickets to

DENVER, COLORADO SPRINGS AND PUEBLO.

At reduced rates, good returning, until October 31st. Also to San Francisco, for parties of ten or more, good for ninety days, at great reduction from regular fares.

REMEMBER, this is the most direct route for all points WEST and SOUTHWEST. For further information, time-tables, maps or folders, call upon or address

THE PRINTING TIMES AND LITHOGRAPHER,

An Illustrated Technical and Fine-Art Journal of
Typography, Lithography, Paper-Making,
and the Auxiliary Trades.

THE NEW SERIES COMMENCED JANUARY, 1875.

THE PRINTING TIMES AND LITHOGRAPHER is a high class journal, devoted to the Printing and Graphic Arts, in all their various forms. It derives its information from, and circulates in, all parts of the world. No pains are spared to insure the accuracy of its intelligence and to render it in every respect worthy of the support of Letterpress Printers and Lithographers, as well as Artists, Antiquaries, and Literary Men generally.

Published on the 15th of each month, 4to, in wrapper, price 6d. Annual subscription (payable in advance), 8s., post free to the United States. Rates of Subscriptions for foreign countries on application. Post-office orders to be made payable at the West Central District Post Office, High Holborn, to WYMAN & SONS, 74 and 75 Great Queen Street, London, W. C., England.

LIME AS A PRESERVATIVE OF WOOD.

The method of preserving wood by the application of lime is said to be found to work well. The plan is to pile the planks in a tank, and to put over all a layer of quicklime, which is gradually slaked with water. Timber for mines requires about a week to be thoroughly impregnated, and other wood more or less time, according to its thickness. The material, it is stated, acquires remarkable consistency and hardness on being subjected to this simple process, and the assertion is made that it will never rot. Beechwood prepared in this way for hammers and other tools for iron works is found to acquire the hardness of oak, without parting with any of its well known elasticity or toughness, and it also lasts longer.

The above statement, which we notice in a number of the technical papers, is apparently worthy of some consideration, as it is confirmatory of numerous statements to the same effect that we have met elsewhere. The plan is exceedingly simple, requiring no special apparatus to carry out, and has the merit of being cheap. It has long been known that wood set in mortar is preserved against decay, and it is somewhat singular that no systematic attempts to utilize this knowledge have yet been made. One of the naval journals not long ago contained the statement that some forty years ago a coasting schooner, built of unseasoned Maine timber, and loaded with lime, went ashore and bilged. This vessel was raised some time afterwards, and is still in service. Vessels employed in carrying lime, the same journal remarks, will last longer than others.

The most interesting case in point, however, is made out by a writer in the now discontinued *London Mechanics' Magazine*. It relates the history of a platform of nine planks used for mixing mortar. It had been used for this purpose by father, son, and grandson, and finally, being no longer needed, was suffered to remain on the ground and became overgrown with grass; but after a period of over sixty years the planks were again brought to light, and were found to be still in a state of perfect preservation.

The method given above appears to be especially adapted for wood employed for architectural and other special uses where the methods of impregnation with creosote and metallic salts would be objectionable.

The receiver of the Joseph Dixon Crucible Company gives notice that in pursuance of an order made by the Chancellor on the 21st day of March, 1881, all creditors of the company must present and prove their claims and demands against the corporation, under oath or affirmation (or make such other proofs as he may require concerning the same), within six months from the date of that order; in default whereof they will be excluded from the benefit of all dividends hereafter to be made and declared upon the proceeds of the effects of the corporation.

William A. Pike, who for some time past has had charge of a very responsible department in James D. Whitmore & Co.'s extensive establishment, has just engaged on his own account in the retail stationery trade at Bridgeport, Conn., under the style of Godfrey & Pike. Mr. Pike is well known among the trade, and is spoken of as being a very enterprising young man, and his many friends, who feel quite interested in his welfare, hope that he will meet with success at every point.

THE VALUE OF BOOKS.

What appreciative reader can sufficiently value books—those silent friends that develop new beauty at every turn? The more life embodied in the book, the more companionable. Like a friend, the volume salutes one pleasantly at every turn of its leaves, and entertains. We close it with charmed memories, and come again to the entertainment. The book that charmed us in youth recalls the delight ever afterwards; we are scarcely persuaded there are any like them, and deserving equally our affections. Fortunately if the best fall in our way during this susceptible and forming period of our lives. Books are to be valued for their suggestiveness even more than for the information they may contain; works that may be taken in hand and laid aside, read at moments, containing sentences that quicken our thoughts and prompt to following these into their relation with life and things. We are stimulated and exalted by the perusal of books of this kind.

The Philadelphia *Public Ledger* of yesterday says that William Mann, the well known stationer, who was on Saturday last seized with apoplexy, which was followed by a stroke of paralysis, is lying dangerously ill at his country residence in New Jersey. The paralytic stroke affected his left side and tongue, but he is now able to articulate sufficiently to make himself understood. His illness, it is feared, is complicated by a heart trouble, his pulse at one time yesterday reaching 150. A moment before he was taken sick he was apparently in perfect health, and was playing with his grandchild. Mr. Mann was born in Philadelphia on June 14, 1814, and has led a busy and useful life. In his youth he learned the trade of builder and house carpenter at Haddonfield, N. J. In 1836 he left there and went to Washington, where he built some of the prominent churches and private residences. While engaged in these operations he was also interested with his two brothers in the shoe business in Washington, and remained so for some years. While there he invented a binder for filing letters in book form, which was adopted by the United States government departments and is still in use. In 1848 he returned to Philadelphia, and started in the stationery business in a small way at No. 74 North Fourth street, above Cherry. Shortly after he invented a letter-copying press, and it is claimed that he was the first manufacturer in this country of copying paper. He attended strictly to his business, which increased so rapidly as to compel him to make several removals to larger quarters. In 1872 he purchased the spacious property No. 529 Market street, where he removed and was carrying on his business when taken sick.

The line of wedding goods shown by J. D. Whitmore & Co. comprises all styles of shapes—long narrow, oblong, and square, open end and side. A great variety of beads, and many recently added. New shapes and beads are being constantly shown. Special notes, sheets and cards for all of the different anniversaries are furnished; also novelties in seal, duplex silver and gold thread, &c. A very elegant line is that of the "Bristol" wedding, gold beveled notes, envelopes and cards. The prevailing taste for tint this season is for white.

The employees of the United States News Company had their first annual reunion at Pohlman's Park, Jersey City Heights, last evening.

WHAT IS A WAYZGOOSE?

This question is seldom asked, except by very young printers, for old hands know from experience just what a wayzgoose is. There is always a lot of fun and foolery going on as the party starts off in a wagonette and all the resplendent glory of resuscitated beaver hats and white waistcoats. There is the inevitable chaff which greets the equally inevitable last man as he rushes, hot and fagged, to his seat in the conveyance. Then there is the peculiar spell which seems to detain the horses until the party has alighted for refreshment at the first roadside inn, and holds them in check as each succeeding hostelry is reached. Then the excitement of sitting down in front of a well decked table, with real live waiters to attend to the requirements of the company, and—what is of even greater moment—a real, non-illusionary spread of eatables and drinkables such as Messrs. Minion, Bourgeois & Co. have probably never before sat down to. Then the toasting and speech-making; the singing and reciting, which serve to fill up the gaps occasioned by the indisposition of one or another of the company who had been relied upon to furnish something original in the way of brilliant and statesmanlike oratory, but, at the last moment, had failed to keep faith. And then, when all this has been duly gone through with, there is the home-coming. Different as this is, in many respects, from the journey down, it has, nevertheless, this common characteristic—the horses appear no more inclined to pass unheeded any one of the public-houses at which they stopped in the morning, nor do the occupants appear any more loath than hitherto to clink glasses together. It is with unsteady hands and husky voices that they now pledge each other's healths; and it is a limp, washed-out handful of humanity which at last crawls up the stairs to the security of home and the comforts of a curtain lecture, delivered with no mean display of ability by Mrs. Minion, whose husband has left the house with light, joyous steps, to return, a few hours later, in what she is pleased to call "a pretty pickle," but

to which we should apply a far different designation.

But the wayzgoose only comes, like Christmas, once a year; and, although opinions may differ as to the necessity for these annual gatherings, we must be thankful for small mercies, and rejoice at the fact that we are not oftener put to inconvenience and expense on account of this "time-honored custom."

As the origin of the word "wayzgoose" is not generally known, we may here state, on the authority of Bailey, that the signification of the term is a "stubble-goose." Moxon, writing in 1683, gives an early example of its use in connection with the annual dinners of the printers of that time. He says: "It is also customary for all the Journeymen to make every Year new Paper Windows, whether the old ones will serve again or no; Because, that day they make them, the Master Printer gives them a *Way-goose*; that is, he makes them a good Feast, and not only entertains them at his own House, but, besides, gives them money to spend at the Alehouse or Tavern at Night; and to this Feast they invite the *Correcter*, *Founder*, *Smith*, *Joyner*, and *Ink-maker*, who all of them severally (except the *Correcter* in his own Civility) open their Purse-strings and add their Benevolence (which Workmen account their duty, because they generally chuse these Workmen) to the Master Printer; But from the *Correcter* they expect nothing, because, the Master Printer chusing him, the Workmen can do him no kindness. These *Way-goose* are always kept about Bartholomew-tide. And till the Master Printer hath given this *Way-goose*, the journeymen do not use to work by Candle Light."

Other authors have quoted Moxon on the above, adding, however, riders of their own composition, more fully explaining the meaning of the term. Thus Timperly, writing in 1839, in a foot note, says: "The derivation of this term is not generally known. It is from an old English word *Wayz*, stubble. A stubble-goose is a known dainty in our days. A wayz-goose was the head dish at the annual feasts of the fore-

fathers of our fraternity." From this it would appear that the original derivation was from the goose which occupied the place of honor at the dinner, and not, as some have striven to show, from the excursion which usually forms part of their festival.—*Paper and Print.*

Steel pens do not appear to last as long as they used to some time ago. This is due largely to the acids in the inks that corrode the pen. Two new finished pens have just been introduced by Ivison, Blakeman, Taylor & Co., agents for Perry & Co., London. They are called Androdine and Silverine, and their distinguishing feature is a new process of gilt and silver plating on a steel pen. This process is said to harden the pens so that they will wear longer and will not corrode and the finish is so perfect that the pens clean and keep clean almost as well as the gold pen. At present the Falcon is the only style made in this way. The agents will be pleased to send samples and price list to any of the trade who may wish to examine the pens. This new finish adds very little to the cost, but it is said that the pens will outlast any steel pen in the market.

The "Champion" postal card file is a new article of manufacture, constructed in box form, and files postal cards in a complete index in the most convenient manner. The cards are so arranged that ready reference may be made and the cards returned to their respective places without injury or in any way defacing the same. Cooke & Cobb, New York, are the manufacturers.

It is difficult for yellow brass articles to long retain the color, but a thin varnish of shellac or a coating of collodion will preserve the color, without giving the appearance of being varnished.

TRADE NOTICE.

These Celebrated Pens are now manufactured with unprecedented skill and care. They have the distinction—which has now become historical—of being the FIRST SUCCESSFUL AMERICAN STEEL PENS, also of having been so popular as to have been counterfeited to the extent of HUNDREDS OF THOUSANDS of gross, which was stopped by judgments of the SUPREME COURT OF NEW YORK and of the UNITED STATES COURTS.

The genuine Pens are now sold direct to the Trade by the proprietors,

THE WASHINGTON MEDALLION PEN CO.,

229 Broadway, N. Y.

PHENOMENA OF GLASS MELTING.

In a recent number of the *Glashütte Prof.* Max Mueller, by way of appendix to another investigation, calls attention to certain facts which he regards as illustrating the common mistake made by glassmen in neglecting the study of the chemical and physical phenomena of the melting process.

In the manufacture of cheap glasses, that is, for the production of green glass, says Prof. Mueller, Glauber's salt (sulphate), is at present generally used in place of the more costly soda. We melt the Glauber's salt with the simultaneous application of coal, which changes the sulphate of soda into the sulphuret of soda, and thus makes possible and quickens the formation of glass. Now, it is a fact well known to experienced glass manufacturers that this addition of coal ought not to be equal or the same in amount in all cases. On the contrary, the quantity to be taken is regulated or determined according to the quality of the coal, and especially according to the management of the fire. In general, an excess of coal works less injury with a clear, bright fire, than with a strongly fuliginous or sooty flame. There are very many manufactories in which they melt the Glauber's salt without any addition of coal. The reduction of the sulphate of soda in such cases takes place from the upper surface of the furnace through the strongly reducing fire. Naturally, in this case one has much sandiver or "gall" to contend with, and the furnaces continually exhibit those well known marks, the so called gall-incisions. Furthermore, in this irrational proceeding, the duration of the melting is needlessly protracted at the least between two and three hours, while the furnace as well as the pots must necessarily suffer. It is for the most part those manufactories which have adopted the Boetius system that melt the Glauber's salt without the addition of coal, and there is no doubt that in the preferred, though by no means necessary direction of the fire of those furnaces, too large an addition of coal would be very destructive. If, for example, we should therein melt down with coal a batch which in a Siemen's furnace would deliver a faultless, well elaborated glass, the difference would be soon apparent. True, the melting would take place rapidly, and in the clear heat the glass would be white, but presently, when the working holes or side openings had been closed and the fire moderated, the glass would be frothy and blistery throughout. Quiet and white in the bright heat, the content of the pot now falls into agitation, it rises as if to boil over, while bubbles or blisters, large and smaller, burst in great multitude under the appearance of fire on the surface. Yellow flames an inch high shoot out from the glass, and again show that the development of gas has been called forth by an inflammable gas. Here also the gas is wholly or for the most part carbonic gas, and the explanation of the phenomenon is comprehended in the words—"The glass at a white heat possesses a power of solution for carbonic gas, which latter as the heat falls in degree is wholly or partially given off."

On closer consideration, Professor Mueller concludes, this fact so striking in itself is not very surprising, since various other bodies, especially metals, exhibit similar phenomena. Thus metallic silver at a high temperature absorbs oxygen which, shortly before hardening, it again throws off (the so called scattering of silver grain).

It is certain that glass in a fluid state possesses a solving power not only for carbonic gas but for other gases as well, and many proceedings at

the production of the crust of our earth, when and where glass-forming processes and phenomena of devitrification brought about by gradual cooling certainly played an important part, might be explained in the same way. In his opinion, it would not be difficult in the way of experiment, having saturated with carbonic gas our common bottle glass at a high temperature and under pressure to change it by cooling and by sudden removal of the pressure into a mass similar in structure to pumice stone. Thus Professor Mueller's investigation, which began by promising interest and instruction for glass manufacturers alone, closes with a speculation valuable and interesting to the geologist and the physical geographer.

OXIDIZING SILVER.—Dr. Ellsner says that there are two distinct shades in use, one produced by chloride, which has a brownish tint, and the other by sulphur, which has a bluish-black tint. To produce the former it is only necessary to wash the article with a solution of sal-ammoniac; a much more beautiful tint may, however, be obtained by employing a solution composed of equal parts of sulphate of copper and sal-ammoniac in vinegar. The fine black tint may be produced by a slightly warm solution of sulphuret of potassium or sodium.

Fulminating gold is prepared by digesting the terchloride of gold in a slight excess of aqua ammonia. It is only made in very small quantities, as a sudden increase of heat or the slightest friction will cause a violent explosion.

Low Freight Rates.

Having anticipated the recent cut in freight rates I have accumulated in New York a very large stock of "D" Slates, and can give immediate shipment of any order.

Slates are lower than they have ever been, and the ruling rates of freight will enable buyers to put these goods in stock at extremely low cost.

D. C. PRATT, 16 New Church Street, New York.

As these rates are liable to change at any time, buyers will do well to order without delay.

MAKING PAINT OF MUMMIES.

A gentleman, passing through Long Acre the other day, peeped into a little shop, and started suddenly at the sight of several dead bodies. They had been dead for over 2,000 years—they were mummies. Where did they come from? From Thebes. Are more coming? Yes; plenty. There appears to be a regular business going on in mummies between Thebes and Long Acre. The mummies are brought over enveloped in their rich bituminous covering, and—horresco referens—ground up, bones, cases, covering, bitumen and all. What for? Why, for paint. There seems to be no burnt sienna like ground mummy. The artists are willing to pay high prices for this mummy paint. Our Academy walls may be limned with the dust of the Ptolemies.—*London Truth.*

One of the most famous printing establishments of France—that of the Lahures—has 800 tons of type and the following working plant: Three of Marinoni's rotary presses, two presses of two colors, twenty retiration machines, five white paper machines, seventeen hand presses, four Minerva presses, four steam engines, one gas motor, twelve Munier's damping machines, three rolling mills for wetting and glazing; in the folding room, five *massicauts*, one hydraulic press, three percussion presses; stereotyping rooms, a carpenter's shop, a machine shop, 6,000 puncheons, 15,000 matrices, 10,000 woodcuts. Five hundred workmen are employed, and many of the grandest works in French literature are here manufactured.

In the examination of certain documents in the national archives at Paris relating to the order of Knights of Jerusalem, an autograph signature of Corneille has been discovered. It is appended to a list of the lands occupied by the poet under the *commanderie* of Sainte-Vaubourg, at Val de la Haye, near Rouen, bearing date 1653. The interest of this discovery is twofold: first, because only five or six genuine autographs of Corneille are known to exist; and second, as attesting the wealth which the poet once had, and lost. The autograph has been placed under a glass frame in the gallery open to the public.

When a man has no design but to speak plain truth, he isn't apt to be talkative.

The J. W. Stoakes Automatic Shading **PEN.** FOR PLAIN, FANCY AND ORNAMENTAL LETTERING.

WASHINGTON, D. C., March, 1880.
I desire to say that the "Shading Pen" invented by Mr. STOAKES meets a want long felt by penmen. The work done by it is perfect in line and shade. The rapidity with which lettering is done, aside from the beauty of the work, is enough to recommend it for general use.

H. A. WHITNEY, Ass't Cashier, U. S. Treasury.
U. S. ENGINEER'S OFFICE, ST. LOUIS, Mo.,
February 11, 1880.

I have tried the PEN, and it gives great satisfaction. It is worth twice the price asked. It is valuable for headings, etc.
JNO. R. BALLINGER.

No other American Inks received a higher award than the Third Degree of Merit.

CARTER, DINSMORE & CO., Boston and New York.

BYRON WESTON

DALTON, MASS., U.S.A.,

HAS BEEN AWARDED THE

GRAND PRIZE GOLD MEDAL

AND RECOMMENDED THE

Medal of Honor and Perfection

At PARIS, 1878,

This being the **HIGHEST** and **ONLY** AWARD given for

LINEN RECORD & LEDGER PAPER.

—A SPECIALTY.—

THIS Paper has received THE HIGHEST PREMIUM over all others from the Cincinnati Industrial Exhibition, Massachusetts Charitable Mechanics' Association, Franklin Institute of Philadelphia, Louisville Exposition, Medal and diploma from United States Centennial Commission, Medal of Progress American Institute, 1877, and Medal of Improvement and Progress, Boston, 1878. Its

PRINCIPAL ADVANTAGES

are as follows:—1. It contains more LINEN than any other Ledger Paper, has a longer fibre, and is, consequently, tougher. 2. Having a harder and better body, it frays less in erasure, so that by simply using the rubber after the eraser, the ink is prevented from spreading. 3. It is more uniform in Weight Color and Finish. 4. It never cockles if properly bound. 5. Its chemical action upon ink is such that it both writes and rules up better. For proof of the foregoing, refer to a large number of Stationers, Bookbinders, Bookkeepers, and Recorders, who have given it, after a severe test, the preference over all others. This paper is Double Sized, and will stand any climate or the most acid of fluid inks.

Send for sample sheet, ERASE and REWRITE FOUR TIMES on same spot,
Each sheet is water-marked with name and date.

PHILADELPHIA NOTES.

[FROM OUR REGULAR CORRESPONDENT.]

PHILADELPHIA OFFICE OF THE LOCKWOOD PRESS,
407 Walnut Street,
PHILADELPHIA, Pa., September 14, 1881.

The season for the wholesale trade is at its height, and the retail trade has begun to experience a very satisfactory demand. I can predict, without risk of contradiction, that our city will never have had a better commercial movement or a more prosperous season than that upon which we are now entering, and there is a prospect that the spring trade will be equally good. Do not be surprised that we look so far ahead. In a manufacturing city like ours, where we have so many manufactories in different lines, and establishments like those of Langfeld, Turner & Andrews, William A. Haines and C. F. Rump for leather goods; A. M. Collins & Co. for cards; Sinclair & Co. and Potsdamer & Co. for lithographs, and so many others, to enumerate whom would take too much space, it is necessary for us to look ahead at least six months in order to provide for the quantities of goods which the retail trade require. You will, therefore, understand that we are already busy in preparing for the demand of the spring season.

Potsdamer & Co. have for some time seen their business increase in such proportions that an enlargement of their factory was prospective, and has now become indispensable. For this reason they have leased all of the upper floors of Nos. 243 and 245 South Third street, where they will remove their manufactured stock. Their removal has been accomplished, and they are in perfect running order. They occupy three floors each, 40x110 feet, which give them all of the room required for the present. On the second floor is the office of the superintendent, and in the rear a large space, entirely separated, is reserved as a drying room. On the third floor are the designers, among whom are many men of well known talent. In the rear is the stock room, which takes up a large space, and the cutting department, where everything is very convenient. On the fourth floor are the presses, which take up nearly all of the room. Seven lithographic presses, two big Hoe steam presses, and a number of job presses are very conveniently arranged. The composing room and the grinding room for the lithographic stones have also a special department. Along half the length of the wall on this floor is a large case which contains the stones in use. These stones are valued at \$40,000. In the opinion of

experts this factory is one of the best arranged that we have.

The salesrooms of Potsdamer & Co. will remain, for the present at least until October 1, at the old location, No. 321 Chestnut street.

I am glad to announce to the many friends of Charles J. Cohen, the well known importer and manufacturing stationer of Philadelphia, that he has been rendered exceedingly happy by the arrival of a son. This interesting event took place on Tuesday, the 6th inst. The boy is to be named Henry Barnet Cohen, after his grandfather, the late Henry Cohen, a man highly esteemed by his fellow citizens and by the trade throughout the country. The middle name is after Barnet S. Cohen, the present head of the London house, and brother of the late Henry Cohen referred to. I offer my congratulations on the auspicious occasion, and hope in a decade or two to welcome the young man to the ranks of the trade.

J. VIENNOT.

CINCINNATI NOTES.

[FROM OUR REGULAR CORRESPONDENT.]

CINCINNATI, O., September 12, 1881.

Nobody is hurt yet. Nobody expects to be in the immediate or approximate hereafter. The meaning of these expressions, if they require explanation is that everybody here in the stationery trade is not only doing all the business he expected to do before the withering summer drought had become a supposable factor in the business affairs of the country, but is very satisfactorily exceeding not only his expectations, but going beyond precedent in the opening of the fall trade.

All dealers are now up to their eyes in the schoolbook business. The sale of pencil boxes has been unprecedented.

There is a falling off in the archery line of outdoor sporting goods; but, like base ball, archery is a summer complaint and, like some maladies, comes and goes as an epidemic. It seems to be losing ground here just now. As a sport, while exciting and exhilarating, it is a trifle expensive. Sooner or later that characteristic will prove fatal either to the sport or to the costliness of the outfit for it.

Russell, Mangam & Co. are fairly at work in the new enterprise which they have added to their mammoth show bill and label printing establishment, that of manufacturing playing cards. They make six lines of the article and put up each pack neatly in wrappers, and insert it in a handsome box. They are scarcely fairly on the market with their goods yet, but are well ready with a full lot of machinery in active operation and a large quantity of finished goods

to hurl upon the market at the word of command.

Wilstach, Baldwin & Co. are running with a full head of steam, working all the hands their house will hold full time on business paper, and have all they can do to keep up with orders.

C. F. Bradley has his presses humming.

J. R. Mills & Co. are up to their ears in work.

A. H. Pounsford & Co. are driving away like mad.

C. T. Woodrow & Co. are whirling out light handsome goods.

M. & R. Burgheim are rushing their big illustrated German almanacs in German, and for Germany as well as for America, with unabated energy.

Of course, Van Antwerp, Bragg & Co., primarily in their mammoth school book concern, and secondarily in their comprehensive blank book enterprise, are making everything spin.

John Beeler is now with George Stevens as a salesman, and the firm is busy.

Robert Clarke & Co. are reaping the benefit of the arrangement by which they took by negotiation the school book business formerly handled by Van Antwerp, Bragg & Co., but not published by them.

Go to the bookstores in this third week in September if you want to see crowds of anxious purchasers and hives of busy clerks.

Boxes are piled high on the sidewalks in front of all of the shipping houses, and draymen and expressmen are jostling each other with their loaded vehicles on the street.

Everybody—manufacturer, jobber, bookseller, bookmaker, dealer, even the little out of the way booth-like stallkeepers—are busy as nailers, and late in the night rays of satisfaction light up the shadows of weariness in their faces.

William Woods, of Chatfield & Woods, is out of the city, whether for rustication or business—more likely the latter—I am not able to say; but I can say that Mr. Chatfield is in the office large as life, and full of life, too. I encountered him to-day, bearded the lion in his den, so to speak, and obtained from him a deliverance on the state of the paper manufacturing business and trade, namely: Mills all going full time, full force, full speed, and full of orders; rags scarce and wanted, and rigidly stiff in prices; product very firm and unchanged, but serenely looking upward. I took Mr. Chatfield for one of the "bulls" until, after an hour's search for a "bear," I concluded that either Mr. Chatfield was no bull at all, or was one of a herd so numerous and so formidable in Cincinnati as to make all the "bears" rush into their holes to hibernate.

There never was a better fruition of business in the stationery line in Cincinnati than that of

this cool September day, and never was the outlook better.

In the purchase of literature the people seem to grow, one might say, suddenly liberal. The publication of standard literature in cheap form is certainly encouraged, and the taste this opportunity generates will induce those growing in property to buy favorite books in more permanent and convenient form. It does look as if the cheap book enterprise would only operate temporarily against the sale of goods in more expensive form, and will finally greatly increase it.

I haven't mentioned the Ninth Cincinnati Industrial Exposition. It is open. Horticultural Hall is an indoor park, etherialized. Dexter Hall groans under the weight of the Siberian mammoth, a megatherium, a whale, to say nothing of numerous other palæozoic monsters molded true to the life in plaster by the learned cunning of some scientific hand. And it is resplendent with rare gems and minerals glorious in refulgence and rich in the whole garnet of color from the dull gloom of blackness to joyous flash of iridescence.

But what has all this to do with paper? Nothing, absolutely nothing. There is paper there, and I shall tell about it in my next.

I forgot to say that W. B. Carpenter is possessed of the opinion that envelopes will take another jump. But he manufactures envelopes, and long ago it was discovered that there is in this world such a thing as the wish being father to the thought. It is merely a phenomenon which is observed in all of us and of which the student of mental philosophy or human nature takes cognizance, and which of itself has no normal quality either good or bad.

I must, before leaving off, say that Stewart & Co. and the Stewart Paper Company are in a whirl of business, and Snider & Hoole are having a lively time along with all the others.

Among the trade visitors here during the past fortnight were Geo. Freeman, American Pencil Company; E. Walker Giles, Esterbrook Steel Pen Company; Mr. Small, of B. Lawrence & Co.; Mr. Phillips, of B. Illfelder & Co., all of New York.

If traveling men visiting Cincinnati will leave their cards with W. B. Carpenter & Co., addressed to the undersigned, they will oblige.

PRINCE WILLIAM.

INDUSTRIAL EDUCATION FROM A BUSINESS STANDPOINT.

Following is an address delivered by John S. Clark, before the Philadelphia Board of Trade and the Franklin Institute, June 6, 1881 (with additions by the author):

If I were to come before your Board of Trade with a statement that there had been discovered within easy access of Philadelphia a bed of iron ore, of vast extent, and of a quality far superior to any known deposit, if I could support this statement by the testimony of eminent mining engineers, if I should submit to you samples of iron and steel manufactured from this ore, and should produce vouchers from experts as to their superior excellence, and if I should further announce that the Baldwin Locomotive Works and the Phoenix Iron Works were ready to accept the product of this ore for their supply—I think there is very little doubt but that sufficient capital could be found here in Philadelphia to develop the enterprise. In accepting your invitation to speak before your Board of Trade this evening, I desire to present a subject of far greater importance to the material interests of this city and State than all the mineral wealth of the district; and if I cannot justify liberal expenditures in promoting it on

grounds as substantial, tangible and practical as can be urged for investment in any of the mining enterprises of the State, I shall have entirely failed in my argument.

Before entering into the details of the discussion I wish to say a word or two in explanation of the term value, a term which I shall have frequent occasion to use. In a commercial sense, value means the price or worth of the thing bought or sold; in economic science—setting aside for the time being any discussion of the effect of supply and demand upon value—the value of an article may be said to depend upon the original value of the raw material and the value of the labor which has been expended upon it. And, further, the original value of the raw material is usually so slight that we may say, speaking broadly, that any particular value set upon an article, such as \$1 or \$10, means that an equivalent amount of human labor has been, as it were, detached from the individual, concreted and put into definite shape for exchangeable purposes. One step further: human labor is but the expression of human thought. From the rudest kind of labor—labor which expresses hardly more than the force of mere animal push or pull—to the labor of the designer, the artist or the poet, all is but the expression of that wonderful human force which we call thought. Thus much being true, we reach the conclusion that human thought, as expressed by human labor, constitutes the principal factor in all values. As the full discussion of this statement will lead us to some important educational, commercial, and political considerations, I desire to make the point perfectly clear, and therefore invite your attention to a few illustrations of the manner in which thought creates values.

I hold in my hand a piece of steel. Its value is perhaps five cents. As yet it may be said to represent hardly more than so much raw material. In this hand I hold another piece of steel, of a similar quality, but less in quantity, and yet this latter has a value of twenty dollars. What makes this difference in value? Simply this, that human thought has been playing, as it were, about this latter piece of steel, and has made it the basis upon which it has concreted itself, so that we have an instrument of great practical use, a micrometer caliper—mainly the product of thought as expressed by skilled labor. Take this copper lamp. Here, again, we have perhaps ten cents' worth of raw material, carrying a value of five dollars, four dollars and ninety cents of which express the value which has been created by thought or skilled labor. In this porcelain vase observe how an insignificant value of raw material is made to carry a still greater value, created by thought. In this instance, we have a few cents' worth of clay transformed by skilled labor into a work of art, and carrying a value of over fifty dollars. Again, in these pieces of cotton goods, and in these Hamburg edgings, we have a few cents' worth of raw material, cotton, carrying values, created by skilled labor, a thousand fold greater than the value of the raw material itself. If we examine industrial products in any department, we find the same condition of things holds true—that the main value in the things made is the product of human thought.

As an extreme illustration of the great value of thought which iron and steel can convey, let me quote the following calculation made by Dr. George Woods, of Pittsburg:

Seventy-five cents' worth of iron ore may be made into:	Worth.
Bar iron.....	\$5 00
Horsehoes.....	10 50
Table knives.....	180 00
Fine needles.....	6,800 00

Shirt buttons.....	\$29,480 00
Watch springs.....	200,000 00
Hair springs.....	400,000 00
Pallet arbors.....	2,577,595 00

It is also to be noted in this connection that thought has made itself felt in commerce in the production of articles of beauty as well as of use.

This vase, whose absolute utility is no greater than that of a common earthenware pitcher, is rated in the market at a value many times that of a vase of ordinary form and color—and the value of beauty, which thought has created here, is just as important, commercially, in these days of our higher and more exacting civilization, as the value of use which thought has perfected in this micrometer caliper. We reach the conclusion, therefore, that in industrial articles, whether they be for use or for beauty, it is the value of the thought expended upon them which principally determines their commercial value. And if we extend our observations, we see that this state of things holds true all about us. The room in which we are assembled, the building of which it forms a part, the contents of this building—what has given to them the value which they represent? Certainly not the raw materials of which they are composed; rather it is the thought which the raw materials are carrying. Step out into your streets, observe the contents of your warehouses and your stores. You find thought expressed in finished products, and you find also food and materials on their way to serve as a supply to this thought as it labors in the expression of its ultimate purpose. Look further.

In your machinery and wonderful mechanical contrivances you have this same human thought attaching itself to the elemental forces of the universe, and subduing steam, electricity, magnetism, to the common service of man. Now, it is human thought acting through human labor, and vivifying it with various degrees of intelligence and skill, that is accomplishing these myriad works, and creating these myriad values.

With these illustrations before us, and with this survey of objects which surround our daily lives, we must see plainly that there are two factors which enter into whatever is produced by human hands—raw materials and the thought which has made use of these raw materials. And we see, further, that of these two factors, thought is by far the most important, material being simply the foundation, or the basis, upon which thought displays itself. Bearing these facts in mind, if we look at the enormous industrial forces which are gathering in England, France and the United States, and observe how human thought is displaying itself in these activities, we may, perhaps, realize something of the commercial changes which are taking place about us and of the more important ones which are impending in the near future; and we may reach some appreciation of what thought really means as an article of commerce, and of the effect which the development of human thought in industrial directions is likely to produce, morally, socially and politically.

Take England, for example. The careful student of modern English history must look to the trade and commerce of Great Britain for the true explanation of the great political questions which now agitate the English people; indeed, the Irish question, and the still greater question of land tenure in England, which lies behind it, are matters which will ultimately be adjusted by the commerce of Great Britain, and it is the industrial element in this commerce upon which the other elements mainly depend. England will be able to hold her own and to overcome the many forces which are now setting against her only so long as she can maintain the industrial supremacy which she has secured by selling the thought of her people. When her manufactures fail, she will fail irrevocably in her commerce, and many of her institutions will share in that ruin.

L. PRANG & CO.'S

Christmas and New Year Cards

ANNOUNCEMENT.

WE hereby beg leave to announce to the trade the completion of our line of Christmas and New Year Cards for this season, for which our agents are now soliciting orders. The extent of our list, the originality, and especially the American character of our designs, together with the great care taken in their execution, will, we have no doubt, secure for our goods the popularity which they have enjoyed heretofore. The efforts we have made to secure the highest excellence, is attested by the names of some of the artists whose designs have been reproduced. We would only name Elihu Vedder, C. C. Coleman, Thomas Moran, Miss Rosina Emmett, Miss Dora Wheeler, Mrs. O. E. Whitney, W. H. Gibson, F. S. Church, R. G. Birch, &c. That a due regard has been paid for the quality of the literary matter, in connection with these designs, is shown by the fact that many of the designs are accompanied by original poems from writers of note, such as Mrs. Celia Thaxter and Mrs. Emily Shaw Forman.

The great increase of our manufacturing facilities, secured by additions to our building nearly doubling our floor space and by the adding of new machinery, will place us in a position to fill orders promptly. Still we would request dealers to place their orders as early as possible, so as to still further enable us to make timely preparation for prompt deliveries.

Our Cards will, as heretofore, be put up in envelopes containing twelve Cards, unless otherwise stated on our price lists.

We furnish envelopes without extra charge for all our Christmas and New Year Cards, for which the list price is \$1.80 per set, and over. Our silk-fringed Cards will no doubt be in great demand this season. We have made ample preparation to furnish these in time and have made arrangements with our manufacturers for the best quality of silk fringes. We would call special attention to the excellence of our fringed Cards and the novelties in colors and style of fringes we offer for this season.

A marked and attractive feature of our cards are the elegantly ornamented backs.

All our fringed Christmas and New Year Cards are furnished with envelopes and protectors, so as to insure safe transportation in the mails.

It will be impossible to embody our whole list in the space of the advertisement, and we will therefore merely give a general outline of the variety offered.

PRANG'S PRIZE CHRISTMAS CARDS.

COMPETITION OF 1881.

These are the Cards selected by the judges in the second competition for four designs of Christmas Cards, for which we offered \$2,000 in prizes of \$1,000, \$500, \$300 and \$200 respectively. At the recommendation of the judges, Messrs. COLEMAN, LAFARGE, and WHITE, the prize for third best Card was increased to \$500. MRS. CELIA THAXTER has written appropriate verses for each of the designs.

- 1st Prize Card (\$1,000), by Elihu Vedder. Size, $6\frac{1}{4} \times 9$ inches; price \$1 each. Same card with silk fringe, cord and tassels, price \$1.50 each.
- 2d Prize Card (\$500), by Miss Dora Wheeler. Size, 7×9 inches; price 75c. each. Same card with silk fringe, cord and tassels, price \$1.25 each.
- 3d Prize Card (\$500), by C. C. Coleman. Size, 7×9 inches; price 75c. each. Same card with silk fringe, cord and tassels, price \$1.25 each.
- 4th Prize Card (\$200), by Miss Rosina Emmett. Size, $5\frac{1}{4} \times 9\frac{1}{4}$ inches; price 60c. each. Same card with silk fringe, cord and tassels, price \$1 each.

The Prize Cards can also be had mounted on heavy board with gilt beveled edges.

We beg to call attention also to the following publications for New Year and Christmas:

- "Goddess Fortune" New Year Card, by Elihu Vedder. Size, $6\frac{1}{4} \times 8\frac{1}{4}$ inches; price 75c. each. Same card with silk fringe, cord and tassels, price \$1.25 each.
- "Christmas Dove." Size, $7 \times 9\frac{1}{4}$. This card is in the same style as the success of the last Easter season, the "Easter Dove" Price 60c. each. Same card with silk fringe, cord and tassels, price \$1 each.

Our Regular Line of Christmas Cards consists, among others, of the following Series:

- Nos. 901, 902, 903, 906, 909, 910. Floral designs ranging in price from 20c. to \$1.20 per set of 12.
- Nos. 904, 905. Humorous Cat and Frog Designs, 60c. per set.
- No. 907 is a new series of Horseshoe designs, 75c. per set.
- Nos. 920 and 929. Children's designs, at \$2.40 and \$3.60 per set.
- No. 922. Shells of Ocean, with figures, \$2.40 per set.
- No. 924. Fans with silk fringes, \$3 per set.
- No. 933. Bric-A-Brac designs, very rich, \$6 per set, and many others.

We offer a similar assortment of New Year Cards, but would call special attention to No. 1320, a new folding calendar, at \$2.40 per set. Most of the Numbers can be had with silk fringes ranging in price from \$2.25 to \$12 per set. Stock will be ready for delivery September 15.

Besides the above, attention is called to our New Birthday Cards, Scripture Texts Cards, New Panels, New Water Colors, by Thomas Moran, and other publications. Our line of Thanksgiving Day Cards will also be shown by our agents.

SLIDE CRIBBAGE BOARD.

The drawing illustrates Lawrence's Slide Cribbage Board, which is the latest improvement on all methods of keeping the game in cribbage. The advantages of this board are that the fixed indicators are an integral part of the board, and do not require the care necessary with the old-fashioned pegs when the board is not in use; nor can they be lost. The scoring is done by the use of plain numerals, in one line, instead of peg holes. Each player can tell at a glance the position of his opponent. On this new board all the numbers from No. 0 to 61 are plainly marked in a straight line, and in a neat and permanent way. Assorted woods have been so blended as to produce a very neat and ornamental effect. The markers add to the general appearance of the board, and cribbage players, it is thought, will find this new invention a vast improvement over the old style of cribbage board. P. Lawrence is the sole manufacturer and patentee.

NEW PATENTS.

No. 246,023. Writing Tablet.—John F. Malette, Boston, Mass.

The combination, with the upper cover or lid of a blank book or writing tablet of a blotter sheet and a flexible connection therefor, the latter being formed by diagonal intersecting rows of stitches connected by transverse rows of stitches.

No. 246,033. Cushioning Device for Printing Machines.—Charles Potter, Plainfield, N. J.

1. The combination, with air-cushioning devices in a printing machine, of air pipes, check valves, and one air escape valve. 2. The combination, with the air cushioning devices in a printing machine, of one air escape valve, an index to denote the extent of opening of the cock, and pipes leading to the air-cushioning cylinders. 3. The combination, with the air cushioning devices in a printing machine, of check valves, a single escape valve, and their connecting pipes, and a blow-off valve and its actuating mechanism.

No. 246,044. Sponge Cup.—Edward J. Stellwagen, Washington, D. C.

1. The representation of a head, the upper portion of which constitutes a sponge cup. 2. A combined pen rack and pen wiper, consisting of a representation of a head formed in two sections, the upper one of which constitutes a sponge cup, and having enlarged ears.

No. 246,046. Draftsman's Triangle and Protractor.—Levi W. Stockwell, Cleveland, Ohio.

No. 246,081. Picture Frame.—James H. Caterson, Philadelphia, Pa., assignor to A. M. Collins, H. H. Collins and Edward Cope, all of same place.

No. 246,100. Preparation of Bankers' Checks, &c.—August Dupré, Westminster Hospital, Broad Sanctuary, county of Middlesex, and Otto Hehner, Holborn Viaduct, London, assignors to Charles Skipper & East, London, England.

1. As a new article of manufacture, paper prepared with a protective mixture that is insoluble in water, but which, when acted upon by dilute or weak acid or an alkali or cyanide of an alkali, will produce a stain or dark mark or marks not removable by dilute acid or alkaline sulphide. 2. As a new article of manufacture, paper treated with a protective mixture compris-

ing metallic sulphide or sulphides, in combination with metallic salt or salts, and which, when acted upon by dilute or weak acid, or by an alkali, or by cyanide of an alkali, will produce on or in the paper a stain or dark mark or marks not removable by means of dilute acid or by alkaline sulphide, thus indicating any attempt to fraudulently alter writing or printing contained on such paper. 3. A protective mixture for paper, consisting of sulphide of zinc or analogous metallic sulphide, in combination with

and William Smith, Golden Bridge Mills, county of Dublin, Ireland. Patented in England September 23, 1880.

No. 246,208. Game.—Stephen W. Roe, Albany, N. Y.

No. 246,246. Perforating Pen.—John Trainer, Blue Mound, Ill.

No. 246,298. Open Envelope or Wrapper.—William L. Eckman, New York, N. Y.

No. 246,339. Lead and Crayon Holder.—Frank B. Powers, Springfield, Mass.

A lead or crayon holder provided with a feeding device consisting of a lead carrier provided with a pawl and a notched slide movable longitudinally, and adapted to advance the carrier step by step by a pawl-and-ratchet movement, and hold it at the point to which it is so advanced.

No. 246,371. Sheet Delivery Apparatus for Printing Machines.—Calvert B. Cottrell, Westbury, R. I.

In a cylinder printing press, the combination, with the impression cylinder, of an oscillating delivery gripper shaft and attached grippers and means for imparting to the gripper shaft at the time of its grippers' taking the sheet from the cylinder a motion on its axis in a direction the reverse of the rotary motion of the cylinder, whereby the points of the grippers are caused to move with the cylinder and approximately in the same direction therewith at the time of taking the sheet.

No. 246,373. Paper Bag Machine.—William C. Cross, Boston, Mass.

The combination, with the clamping jaw roll, of a blade roll provided with a blade adapted to tuck the ply to be folded into the bite of the clamping jaw, and with side blades or flanges, which project beyond the tucking blade and act to push the ply or plies which underlie the flap to be folded down into a recess or pocket in the jaw roll, so that the loop or bend of the said pushed down ply or plies will be carried beyond and out of the bite of the clamping jaw.

No. 246,384. Writing Desk.—August Frank, New York, N. Y.

No. 246,389. Method of and Apparatus for Removing Wall Paper from the Hanging-Up Machine.—Thos. Henry, Buffalo, N. Y.

An improved method of removing festoons of wall paper from a hanging-up machine, consisting of placing a rack in position below the paper to be removed, lifting the rack in suitable guides to and upon a car which has been previously placed in position over the paper, the sticks carrying the festoons being removed from off the endless band (upon which they rest) without change of relative position in the upward movement of the rack, and then moving the car, with the paper placed thereon, to the point desired.

No. 246,391. Composition of Matter to be Used in the Ornamentation of Moldings and Picture Frames and the Manufacture of Light Hollow Ware, Toys, Trays, &c.—James R. Howell, Buffalo, N. Y.

A composition of matter, consisting of glue, rosin, paper pulp and boiled linseed oil, admixed and thickened to a paste, while hot, by the addition of whitening.

DESIGNS.

No. 12,436. Pencil Case.—Ieroy W. Fairchild, New York, N. Y. Term of patent seven years.

No. 12,438. Font of Printing Type.—Charles E. Heyer, Chicago, Ill., assignor to Arthur M. Barnhart, Alson E. Barnhart, Charles E. Spinder, all of same place. Term of patent fourteen years.

TRADE-MARKS.

No. 8,562. Chromo-Lithographs.—Raphael Tuck & Sons, London, county of Middlesex, England.

"The representation of an easel and a palette."

No. 8,583. India-Rubber Toys.—Althof, Bergmann & Co., New York, N. Y.

"A horse inclosed in a circular border."

SLIDE CRIBBAGE BOARD.

carbonate of lead or analogous salt of heavy metal (or metals).

No. 246,179. Pocketbook or Wallet.—John Wesley Meaker, Auburn, N. Y.

In a pocketbook or wallet, the combination, with the coin drawer, of a rigid case or shell surrounding the drawer and an outer covering enveloping the case.

No. 246,180. Type Case.—Leonard H. Miller, Port Clinton, assignor to David J. Stalter and Will D. Axline, both of Upper Sandusky, Ohio.

No. 246,206. Manufacture of Paper.—Nicholas G. Richardson, Tyaquin Monivea, county of Galway,

The above cuts show our new method of putting up *Fine White Writing and Linen Papers*, for general use, in *Portfolio Style*, with a sheet of the best Blotting Paper attached to the cover as represented, making it the BEST and MOST CONVENIENT form for writing tablet in the market, which will only need to be seen to be appreciated.

TOURISTS' TABLETS.

This is a line of *Fine White Writing Paper*, handsomely bound in Tablets, with flexible covers to keep the paper compact and prevent it from being soiled. They will be found very convenient for the use of travelers and others where a less expensive tablet than our "Portfolio" is desired. The covers are printed with a neat design, making them a very attractive as well as convenient article for general use. They are put up in packages with ten tablets of eighty sheets each, of the following Nos. and Sizes:

No. 121.—Commercial Note. No. 122.—Packet Note. No. 123.—Congress Letter.

THOS. DE LA RUE & CO.'S IMPERIAL TREASURY

WRITING PAPERS

AND ENVELOPES.

THIS POPULAR STATIONERY is made from the very best rags, and is tub-sized with the purest animal size by a process which strengthens it throughout its entire texture. It is supplied with a rough, mill rolled, or highly finished surface. Each sheet of paper bears the watermark, "Imperial Treasury, De La Rue," and the Imperial Crown and Monogram. Both paper and envelopes are packed in neat, ornamental boxes, with hinged lids and fall-down flaps—the paper in five quires and the envelopes in boxes of one hundred. This paper combines the excellences of hand-made paper, with the best characteristics of machine-made paper, and we can with confidence recommend it to all stationers who deal in first-class stationery.

Samples and prices on application to our American representative, **Mr. A. J. PULSFORD**, P. O. Box 1590, New York.

Trade Gossip.

All new goods and designs which are not, strictly speaking, "Novelties" will be noticed under this head. The trade are requested to forward descriptions with samples in order to secure proper notice.

W. I. Melvin, printer, Warren, Mass., has sold out.

Ferdinand Singer, dealer in wall paper, St. Louis, Mo., is dead.

M. P. Carey, newsdealer, &c., St. Louis, Mo., is advertising to close out.

Ira Waldron & Co., publishers, St. Louis, Mo., have dissolved partnership.

Henry Neil, dealer in fancy goods, Huron City, Mich., has been burned out.

Watson Brothers, publishers, Lake View, Oregon, have dissolved partnership.

W. H. Ewer, bookseller and stationer, Strathroy, Ont., has assigned in trust and left town.

F. N. Hawkins has retired from the firm of Hawkins, Timms & Co., printers, Toronto, Ont.

The stock of D. Mackintosh & Co., dealers in paper hangings, San Francisco, Cal., has been attached.

Mrs. A. Davidson, dealer in notions, Lonaconing, Md., has been burned out. Loss, \$3,000; insured, \$1,200.

E. K. Dunbar & Co., publishers and printers, Boston, Mass., have dissolved partnership. Stanley & Usher succeed.

H. T. Brawner & Son, booksellers and stationers, Griffin, Ga., have dissolved partnership. J. K. M. Brawner succeeds.

The business of the late William Mann, Philadelphia, will be conducted, under the same firm name as heretofore, at 529 Market street.

Among the many varied styles of orders for dancing issued by J. D. Whitmore & Co. are several exceedingly tasty series, which are to be very popular this season.

Mr. Marshall, of Marshall & Bruce, Nashville, Tenn., who had been spending the summer with his wife along the New England coast, passed through this city on Wednesday, en route for home.

The straw board mill of the Southford Manufacturing Company, Southford, Conn., was destroyed by fire early Tuesday morning. The loss is \$40,000; insurance \$28,000. The mill will be rebuilt at once.

The banker's blotting paper, sold by A. G. Elliot, Philadelphia, is said to be meeting with great success among business men, who prefer it to any other. It is said to be equal in quality to the best brands of other makes, and one-third cheaper.

The manifests of the different lines of steamers from Europe show that McCarty & Hasberg received during the past week ninety-five cases of goods, most of them containing novelties suitable for the holiday trade. This is a very large showing for this class of goods.

The Carson & Brown Company, Dalton, Mass., has just shipped five cases of its celebrated linen ledger paper to Buenos Ayres, and has received numerous inquiries from South America, Mexico, the West Indies, &c. This is all due to the company's advertisement in the *American Mail and Export Journal*, through which the company has been brought in contact with buyers in different parts of the world.

W. D. Bennage, Jr., Philadelphia, has taken a new departure, and has leased the old stationery stand at 1035 Walnut street, where an excellent business has been done in former years. He has been connected with the house of Matthews & Co. for the past two and a half years, and previous to that was in business at 47 North Ninth street. It is expected that he will meet with the same success that crowned his efforts at his old location before illness obliged him to relinquish business. Attention is called to his advertisement in another column.

The Acme Stationery and Paper Company is so busily engaged at present that it finds it almost impossible to keep up with its orders. Its school trade, which usually is nearly over at this time, is prolonged later than in past years owing to many orders given last June now being duplicated. It is about getting out some novelties for the winter trade.

Asa L. Shipman's Sons offer a fine line of card albums. The demand for this class of album has been brought out by the great furor for making up collections of chromo cards. This firm has assumed the entire control of the sale and manufacture of the Common Sense binder, and has improved the style of binding.

The trade should not fail to examine the large line of fancy leather goods manufactured by Loeb & Brother, as soon as possible, as the house is generally not able to fill all of its orders when the season advances. In certain lines the firm has made special efforts to offer a greater variety than during any previous season.

A pretty French circular fan is made of black satin, hand painted in water lilies, reeds and feathery grasses. In the centre are two large humming birds perched upon a branch of red raspberries. The handle is of Oriental jet inlaid with mock rubies.

The Wm. Cable Excelsior Wire Manufacturing Company's employees will play a game of base ball with a nine from the W. Wooley wire works, at the Union Grounds, Brooklyn, at 3 o'clock on Saturday afternoon.

R. Fideau, 16 Beekman street, is extremely busy on orders for school slates, pencils and Union school bags. The hot spell during the past week prolonged later than usual the demand for his patent hammocks.

The business of Angell, Hammett & Co., job printers, Providence, R. I., is continued by A. N. Angell, who has taken possession under a mortgage.

Any one who wants to see one of the most brilliant papeterie exhibits ever shown should visit Myers Brothers' warerooms without delay.

Caswell & Hoyt, publishers of the *North Star*, Danville, Vt., have dissolved partnership. Hoyt & Preston succeed.

Chas. Robson, of the firm of Chas. Robson & Co., publishers and booksellers, Philadelphia, Pa., is dead.

W. H. Pierce, dealer in periodicals, &c., Providence, R. I., has sold out to Wm. Hanrahan.

Grogan & Martin have succeeded Grogan & Murtha, printers and stationers, New York city.

Mrs. W. T. Hayward, fancy goods dealer, Biddeford, Me., is advertising to close out.

Bryan & Son, publishers of the *Times*, Lake Benton, Minn., have sold out.

Thomas H. Mulligan, newsdealer, &c., De Soto, Mo., has sold out.

Charles Carter, paper box manufacturer, Leominster, Mass., is advertising to close out.

Bertha Klein, dealer in notions, Kankakee, Ill., has been burned out.

W. M. Harford, publisher of the *Chronicle*, Muskegon, Mich., has sold out.

Gain Brothers & Miller, paper bag manufacturers, Hamilton, Ont., have dissolved partnership.

Mr. Esser, of Keuffel & Esser, of Fulton street, this city, arrived from Europe by the Bothnia last week, in company with Henry Hoe.

Francis Wood, of the Esterbrook Steel Pen Company, has just returned from a Western trip. He reports the prospects for trade as promising.

The New York Crayon Company is very busy at present, and is meeting with an increased demand for its goods. Its factory is running constantly with a full force.

The firms of C. Whitcomb & Co. and Rice & Whitcomb, copying press manufacturers, Worcester, Mass., have been united, under the name of the Whitcomb Manufacturing Company.

D. C. Pratt notifies to the trade that in consequence of an advance in slate at the quarries, he is obliged to make a corresponding advance in "D" slates; consequently he withdraws all former quotations.

Henry Hoe, agent for Gillott & Sons, Birmingham, England, and who, with his family, has been on a visit to Europe for the past three months, arrived home safely a few days ago, appearing improved by the trip.

H. L. Lipman, 51 South Fourth street, Philadelphia, has the agency for Hoyer's patent manuscript paper, in various sizes. This paper is so prepared as to at once produce a black manuscript, whether a black ink or pale writing fluid is used. Send for samples.

One of the largest, handsomest and most elegant lines of papeteries ever offered in this city is said to be that shown by Myers Brothers. It includes cabinets, jewel cases, glove and handkerchief boxes, ladies' workboxes, &c., in plain and fancy satins and velvet, and in plain, fancy and brocaded plush. Over one hundred varieties are shown, and the trade in general should see the line before placing their orders. An inspection of the warerooms would repay the visitor.

Henry Levy & Son, 477 Broadway, report business exceedingly good and much ahead of any preceding year. This they attribute to the varied styles of goods they are offering this season, and which have attracted buyers. They have just received, and will have ready for sale by the time this is before the public, a superb line of ladies' cabas, work baskets and fans, designed specially for them. They are offering a writing desk, which can retail for a dollar, which is said to be the best article at the price in the market.

William T. Amies, publisher of books and albums, at No. 25 Park place, New York, and at No. 1,420 Chestnut street, Philadelphia, has become financially embarrassed, and has submitted his affairs to his creditors, from whom he has asked an extension, expecting to pay all his debts in full if sufficient time is allowed him. He ascribes his embarrassment principally to the loss of a large sum due him from James Jordan, a book dealer, of No. 21 Park row. The liabilities of Mr. Amies are reported to be about \$60,000, and the value of his assets is placed at from \$50,000 to \$60,000. The majority of the creditors are in Philadelphia. Mr. Amies has been in business about four years, and had estab-

lished a fair trade, mainly in Bibles, illustrated books and albums.

J. & R. T. Love, bookbinders, New York city, have dissolved partnership. John Love & Co. continue.

Among the notable arrivals in this city this week is Spencer Clawson, of the Zion Coöperative Mercantile Institution, of Salt Lake City, Utah.

T. B. Peterson & Brothers, Philadelphia, have just published "The Bridal Eve," by Mrs. Southworth. This is one of the novels displaying the noted author's characteristics of fancy and description in the strongest light, and will be welcomed by many readers.

William A. Davis, Boston, has just got out a circular ink rack, made of lustral wire. This rack contains three dozen one ounce bottles—six colors—of Treasury assorted writing ink. This is a convenient arrangement for the show case or window, and the ink is warranted equal to any manufactured.

R. Worthington, 770 Broadway, announces for immediate publication "Chatterbox Junior," edited by Edward Willett, Joshua Kendall, Miss Pollard and others, and illustrated with colored and full page wood engravings. The publisher considers this "Chatterbox Junior" the best juvenile of its kind ever issued. It is entertaining and, at the same time, instructive; it will be a source of delight to children, and will guide their taste in the right direction.

H. Norman Cotton, for fifteen years in charge of the manufacturing department of Winkley, Thorp & Dresser, and their predecessors, the Cambridgeport Diary Company, and Cutter, Tower & Co., has purchased an interest in the late firm of Page, Spaulding & Co. The new firm is known as Spaulding, Cotton & Co., and will continue business as account book manufacturers, stationers and printers, at No. 24 Milk street, Boston.

The firm of Parmenter & Walker, manufacturers of chalk crayons, at Waltham, Mass., and also one of the proprietors of the American Crayon and Slate Company, of this city, has been dissolved, Mr. Parmenter retiring, having sold out his interest to Mr. Walker. The business of the American Crayon and Slate Company, this city, it is understood, will be continued as formerly. The firm of Parmenter & Walker has been in existence since 1845, and it is said that it was the first to engage in the chalk crayon business in this country.

James Jordan, dealer in books at No. 21 Park row, New York, has failed, having been involved by the failure of D. & J. Sadlier & Co., for whom he indorsed accommodation paper to the extent of \$8,742. He owes William T. Ames \$5,700, which he offered to compromise for 83½ per cent. Mr. Ames refused. Judgments were entered against Mr. Jordan by T. Kelly for \$945, and by J. E. McHugh for \$321, and the sheriff sold out the stock, realizing about \$500, not enough to satisfy the judgments. Nearly all the assets are in accounts due for books sold, and as they are scattered all over the country, the difficulty in collecting them will make the actual assets comparatively small; the nominal value of these assets is about \$25,000. The total liabilities are about \$16,500, of which \$8,742 is on accommodation paper, and the balance for merchandise. Mr. Jordan began business about fifteen years ago, the specialty being the selling of books on the installment plan by canvassers. He has branches in Chicago, Rochester, Buffalo, Utica and Syracuse.

Z. Crane, Jr., of Dalton, Mass., returned from Europe last week by the steamer Polynesian.

The Guest album is a volume in which the name of each visitor, his residence, the dates of his arrival and departure and his destination, may be entered, together with remarks sentimental, humorous, witty or wise, opposite to selections from well known authors. The pages are headed with brief, pithy quotations from celebrated authors, and the marginal selections are elegant, racy, and pointed, redolent of the wit which sparkles but never burns. This album, well kept up, will constitute an entertaining and instructive repository of the brightest and best thoughts of friends, and a permanent record of the most memorable and pleasing incidents of their visits. The book is an oblong demy quarto, tastefully printed and ruled in red, on a pale rose-tinted paper made specially for it. It is handsomely bound in cloth, assorted colors, with side title in gold and black, and ornamented with

appropriate designs and inscriptions, and is inclosed in a wrapper, on which is printed full information as to the object and uses of the book. There is also an edition in antique morocco. Leggo Brothers & Co., New York, are the publishers.

George W. Shepard & Co., 213 River street, Troy, N. Y., are manufacturers of Shepard's patent invoice, scrap or music book. This book meets the requirements for books of its class and is remarkable for strength, the back being made of wood and rounded in such form that the cover is not liable to be torn away, even with constant use. The papers or leaves are inter-locked on the wood back and thoroughly fastened by wires (no thread being used). The back being of the proper width the cover will lie flat when the book is filled, and will not get out of shape. When filled the leaves can be readily removed from the book and replaced by others without the least injury. The book can, therefore, be used for a term of years.

THE MOST EXTENSIVE LINE OF PAPETERIES IN THE WORLD.

N. B.—We offer this season a new line of CHRISTMAS CARDS, in artistic designs and produced in the highest style of the art. The trade supplied with collections costing \$25, \$50, \$100, \$200, \$300 and \$500; less trade discounts. Correspondence solicited.

NEW YORK OFFICE AND SALESROOM, 18 MURRAY STREET.

THE BAY STATE PAPER COMPANY,

HOLYOKE, MASS., were among the pioneers in the W. C. Paper trade, and their goods, from the start, were distinguished for their fine quality and the superior style in which they were wrapped. Their example has been approved and imitated by a swarm of competitors, who have flooded the market with inferior goods, put up in packages of 600 to 800 sheets, misleading the unwary, and sold at apparently lower figures; but the trade and consumers generally recognize the fact that a good article, honestly put up, in 1,000 sheet packages, is the most profitable both for use and for sale. Their goods are all guaranteed 1,000 sheets to package, and no short count. No wood is used in any of these papers, but they are made of the very best stock in the market.

THE "MEDICATED BOUDOIR" BRAND

Has no equal for weight, strength, softness, and color, and commands the front place with "fine retail trade." Present reduced quotations furnished on application.

DIRECTORY.

Cards under this heading will be charged for at rate of \$10 per annum for each card.

DEVOTED TO THE INTERESTS OF THE

Stationery and Fancy Goods Trades.

WEEKLY--\$2.00 PER ANNUM.

Single Copies - - - - 10 Cents.

NEW YORK, THURSDAY, SEPTEMBER 15, 1881.

Advertisements cannot be received for insertion in the current week later than 12 m. on Wednesday. The charge for advertising is 25 cents a line, each insertion. Special terms for standing and displayed advertisements to be had on application.

This journal aims to be a medium of information for and a representative of the interests of every one connected with the stationery and fancy goods trades. It contains a full and trustworthy survey of the market for stationery in this country, in all cases giving the actual prices at which goods can be bought of importers and jobbers in this city, together with a detailed account of novelties in the trade, patents relating to stationery, and current items of interest. A review of foreign markets and accounts of movements abroad will also be furnished, and no pains will be spared to make **THE STATIONER** a thorough and complete exponent of the trade.

Subscription and postage for Great Britain, per annum..... 12s.
Any information our readers may wish to obtain shall be cheerfully given, and prompt replies will be made to all inquiries addressed to us on any subjects of interest to the trade.

Communications on all trade matters are earnestly solicited. Address

Subscribers to **THE STATIONER** can be supplied with the best cloth binder in the market. Deliverable at the publication office. Price, fifty cents.

Readers of this paper who avail themselves of the information obtained from its columns, by advertisement or otherwise, are requested to notify their correspondents of the source of their information.

SATISFACTORY reports of the state of trade continue to prevail.

PHILADELPHIA is all aglow with activity, both in manufacture and sale. Prospects are pleasant.

CINCINNATI comes up this week with a vivacity which would be surprising, were we not assured that it is warranted.

ENVELOPE makers have not got over the idea of higher prices, and our reports today indicate that there is an impression that quotations will be advanced. We shall not be surprised if they are, but we would caution the manufacturers not to try for too much.

UNDERSELLING with the connivance of manufacturers is again illustrated in a letter from Washington, which will be found in another column. The trade ought to get points on manufacturers who sell to people who make a business of cutting legitimate trade, and authenticate the facts. Publication can then follow, and some of the wrong-doing will be stopped.

GREAT expectations are formed of the forthcoming international exhibition at Atlanta, Ga. The buildings have been completed, everything is ready for the reception of exhibits, and the remarkable forwardness of the preparations gives promise of good management. This will be one of the most interesting and important exhibitions ever held, and we hope that it will return great benefit to the section of the country most immediately interested in its success and to the whole people as well.

NOT knowing under what auspices the proposed tariff meeting, to be held in this city on November 30, is called, we are not ready to express any opinion as to the probable success of the meeting. It is understood that a call has been issued—we have not seen it—for a national convention of representatives of the agricultural, manufacturing and commercial interests of the country. The object of this convention is said to be to consider and recommend such Congressional action as will promote domestic and foreign commerce and afford adequate protection to American industry. The subjects to be considered are described as follows: "1. Immediate remedy of the injuries done by decisions of the Treasury Department and the courts, which have so construed the tariff laws in many cases as to legalize evasions of customs duties, to prostrate numerous American industries, and to give to foreigners large sums of money which should go into the United States Treasury: decisions which the Secretaries of the Treasury, in some instances, have declared to be wrongs which Congress should be asked to remedy. 2. The appointment of a competent commission to thoroughly investigate and report upon the progress, condition, and needs of American industries, and to recommend such tariff legislation as will be pro-

tective in character, consistent in all parts, and adapted to the present condition of the business of the country. 3. The policy of an early and progressive reduction of internal taxes by the general government. 4. The maintenance of a favorable balance of trade and the enlargement of the markets for American products by the promotion of our ship-building interests and foreign commerce." These are all legitimate subjects of discussion and should be carefully reviewed and considered by business of every degree. But there is a possibility that this movement is the tentative of floating agitators whose chief ambition it is to make themselves conspicuous or to derive some local prominence which may help them in schemes of petty profit. If this convention is to be organized and governed by an intelligent and influential body of business men, well and good; but—if ward statesmen are to handle it—we want none of it.

Communications.

[Correspondents are requested to write on only one side of their paper. No responsibility for the opinions of correspondents attaches to this paper.]

Underselling the Trade.

To the Editor of The Stationer:

Here is a sample of what we have to contend with:

Only Tuesdays and Wednesdays you can buy at R. Goldschmid's, No. 812 Seventh street northwest, school slates 6¼ by 10, 3 cents; 7 by 11, 4 cents; noiseless school slates, 7 cents; slate pencils, three for 1 cent; furnished school companions, 10 cents; lunch baskets below cost; school bags, 10 cents; fine goblets only 45 cents per dozen; jelly tumblers, 45 cents per dozen; 3 quart pudding pans, 5 cents; 8 quart, 10 cents; spittoons in different colors, 10 cents; 2 quart covered tin buckets, 5 cents; 10 quart dish pans, 12 cents, also great bargains in every department while enlarging my store.

A year or so ago the trade was allowed a medium profit on school supplies, now we are tied down to New York wholesale rates, and, notwithstanding this, here is a man who discounts us at retail, entirely outside of the business, 50 per cent.

It is a disgrace to any wholesale house to dirty its hands with such business in supplying houses which cut the throats of the dealers on their legitimate lines of goods. I handle only a few hundred dollars worth of these goods, but I hate to have customers come in and throw this business up to me, that a man not even in the business can undersell the largest houses in the business. Who sells these houses?

OCCASIONAL.

ANSWERS TO CORRESPONDENTS.

A. C. & Co. ask for the address of manufacturers of memorandum books of certain character.

Ans.—Liebenroth, Von Auw & Co., New York.

Among the visiting members of the trade in the city this week were: James T. Hammond, Logan City, Utah; H. T. Smith, of H. B. Nims & Co., Troy, N. Y.; Max Elser, Fort Worth, Texas; L. J. Elser, Corsicana, Texas; Horace Drew, Jacksonville, Fla.; H. M. Bristol, of Bristol & Smith, Utica, N. Y.; Spencer Clawson, from Z. C. M. Institution, Salt Lake City, Utah, and Frank E. Gibbs, of E. C. Palmer & Co., New Orleans.

OBITUARY.

WILLIAM MANN.

In last week's STATIONER, the serious illness of William Mann, of Philadelphia, was announced, and a brief sketch of Mr. Mann's career was given. At the time this paper went to press the illness had resulted fatally.

Mr. Mann died on September 7, at his country residence, Haddonfield, N. J., at five minutes past 10 P. M. His funeral took place on the 9th inst., and was attended by a great number of friends. His name will be long remembered in the trade, and his memory will be cherished by those who knew him best.

A meeting of the slate quarrymen of Northampton and Lehigh counties was held at Easton, Pa., on Monday, September 5, which was attended by the principal operators. It was decided at this meeting to make an advance on all kinds of slate, including rough school slate, about 25 per cent. It is understood that the stock of manufactured school slates has not been so light for many years, and many of the leading manufacturers are said to be speculating in the goods.

A joint nine, made up of the Beekman and Duane street players, will play a game of base ball on Saturday afternoon next with a nine from the Fulton and Dey street straw paper houses at the Union Grounds, Brooklyn. The game is expected to be very interesting, and will doubtless draw a large crowd to witness it.

Leggo Brothers & Co., New York, have published an infinitesimal edition of the New Testament, revised version. This is a complete miniature reproduction of the Oxford edition of the Revised New Testament, including the preface by the revisers and an appendix of the renderings preferred by the American translators. The type work on each page measures 1 by 1 1/4 inches. The whole book, comprising 446 pages, is printed on a single sheet of superfine paper, 24 by 38.

SEMI-CENTENNIAL AMERICAN INSTITUTE FAIR.

The American Institute Fair was opened yesterday and will be closed on November 26.

Never were there so great preparations made for the great exhibition as now. Charles Wager Hull, the general superintendent of the fair, has been at work, and surrounded by a great crowd of decorators, artists, and others, has renovated the Institute building in making it ready for the great show. Great improvements have been made in every respect, and the old visitors will hardly know the place.

The applications for space have been more numerous than usual. It is doubtful whether all can be accommodated, and probably many will be crowded out for want of room. The show promises to be more interesting than ever, and many new and interesting inventions, especially in the machinery department, are curious and novel. They are all the work of American inventors who are prolific in genius, and displayed many new inventions which are greatly to their credit.

The art gallery will be very complete. The music will be furnished by the Ninth Regiment Band, under the direction of M. Arbuckle, the celebrated cornet virtuoso, and concerts will be given every afternoon at 2 and every evening at 8, at which the cornetist will perform. He is considered by many artists to be superior in his line even to Levy, who draws such extravagant pay.

H. K. & F. B. Thurber & Co. will make a grand display of tropical fruits and other curiosities from all parts of the world. Asher S. Mills, the press agent, will extend every courtesy to the members of the press, and cheerfully give them every bit of information they desire. His room is No. 6 on the main hall, and he is always in attendance.

J. D. Whitmore & Co. have just issued a new price list of their engraved work, giving prices for full sets of wedding invitations, at home, visiting, business and other cards, "commencement" invitations, opening announcements, and, in fact, every variety of fine steel and copper plate work. This house has ample facilities for the handling of all such work. Engraving in all its branches is also attended to. The firm's artistic and varied line of steel plate folders, for advertising purposes, menus, orders of dance, concert programmes, &c., are said to be in steady demand. This line is furnished to the buyer without the manufacturer's imprint. The firm has superior facilities for handling the finest of elegant illuminated stamped work. Designs for monograms, crests, heraldic subjects and all similar work, are furnished, and all the work receives careful supervision, whether of the cheaper class or best.

The new catalogue of Milton Bradley & Co., Springfield, just published for this season, lists a large number of novelties, many of which are secured by patents. One of the latest issued to this firm is for the game of cards designated as "Old Maid Improved." The peculiar feature is making the pairs parts of one design or picture, instead of two cards alike. The designs are all new, and many of them quite ludicrous, and, being lithographed in colors, are very handsome and interesting aside from the game. A number of the other novelties for this season are covered by patents issued within a few months, including the menagerie and aquarium car, the "Tug and Tow," the "Carillon," an automatic musical toy; the "Feudal Castle and Citadel." A large number of other toys made by this firm are covered by the Crandall block patent, under which

it manufactures by license. As the toy business of this country increases, the manufacturers seem disposed to secure individual protection under the patent laws, thereby enabling each one to retain the control of his own inventions, and producing a healthy rivalry in the invention of novelties each season. The goods now embraced in the catalogue above noticed are secured by no less than eighteen patents, some of which cover several different articles. This is thought to be an advantage to the trade because it insures more stability of prices, each manufacturer having his own line of goods, and being much less likely to break prices through the season than if crowded by close imitators.

Market Review.

OFFICE OF THE AMERICAN STATIONER, {
WEDNESDAY, September 14, 1881. }

THE MONEY MARKET.—The monetary situation was characterized by a fair degree of ease throughout the week. The extreme rates for call loans on pledge of acceptable stock collateral were 3 and 6 per cent., but the great bulk of the business was effected at 4 1/2 per cent. The stock market has been alternately weak and firm, with, however, a better tone most of the time than has been apparent for some weeks past, based upon the prosperous condition of the leading railway companies. In the government bond market a fair degree of activity prevailed. The changes in prices are an advance of 1/4 per cent. in extended 5s, 4 1/2s, and registered 4s. The Secretary of the Treasury has decided to call not for the fives or sixes of 1881, but for \$30,000,000 of the 3 1/2 per cents. The railroad bond market was rather quiet, but the tone of the dealings was firm, and most of the leading issues show an advance on the week's transactions. Foreign exchange is still at a point which affords a profit in importing gold; but as an easier money market has lessened the demand for that metal, the chances are that the specie movement in this direction will soon cease. The posted rates for prime bankers' sterling are \$1 81 @ 4.8 1/2. The actual rates are \$1.79 1/2 @ 4.80 and \$1.83 1/2 @ 4.83 1/2, with cable transfers at \$1.84 @ 4.8 1/2 and prime commercial bills \$1.78 @ 4.78 1/2.

THE PAPER MARKET.—Trade has shown some improvement over that of last week, owing to the more comfortable temperature and the advance of the season. Most dealers have done a very satisfactory business; in fact we know of some orders having been refused for the want of stock to fill them. While no decided advance in prices has been established, some manufacturers have so many orders to fill and are hindered by drought so much, that in instances an advance has been asked and secured. This is more particularly the case with medium book and manilla papers. The market throughout is very steady, and the drought, if it continues much longer, cannot fail to bring about an advance in prices for every grade. It was only a short time ago that the straw wrapping trade was suffering from an accumulation of stock; but the drought has been of such continued duration, that, although the demand has only been moderate, supplies have become very much reduced, and dealers have now no assortment with which to fill their current orders. Prices have recovered from the weak condition they were in a few weeks ago, and there is now a steadier and firmer feeling in the trade.

THE STATIONERY MARKET.—The fall trade is making very satisfactory progress. Business was never in a more healthy condition than at present. Buyers are governed entirely by the consumption of their customers, and there are no signs of speculation. Purchasers are paying promptly for what they buy, and ordering more largely than formerly. The fancy goods trade continues quite active, and some of the school supply houses, whose trade is nearly over at this time, are duplicating orders given last June. The movement looking to an advance in prices of some grades of envelopes is being agitated and taking shape, and it is more than likely that a meeting of the manufacturers for that purpose will take place before the close of the month. No changes in prices have been reported since our last issue, and values throughout remain on a firm footing.

CHICAGO, September 1, 1881.

DEAR SIR—With our Compliments, we desire to invite you to an examination of our HOLIDAY STOCK when you visit this city. Our Mr. Carl Beer, recently returned, has spent five months in Europe, purchasing from first hands for cash the greatest variety and most elegant stock of **Fancy Goods, Toys and Novelties** of the German, French and English Markets, which, with the elaborate selection of American made Fancy Goods for the Holiday Trade, makes our Stock the most complete ever offered in this city. We guarantee Low Prices, and hope you will favor us with a call.

Yours Respectfully,

SCHWEITZER & BEER,

111 State Street, near Washington.

Our complete Fall Catalogue will be mailed on application, and orders will receive careful attention.

The J. W. Stoakes Automatic Shading PEN.

FOR PLAIN, FANCY AND ORNAMENTAL
LETTERING.

WASHINGTON, D. C., March, 1880.

I desire to say that the "Shading Pen" invented by Mr. STOAKES meets a want long felt by penmen. The work done by it is perfect in line and shade. The rapidity with which lettering is done, aside from the beauty of the work, is enough to recommend it for general use.

H. A. WHITNEY, Ass't Cashier, U. S. Treasury.

U. S. ENGINEER'S OFFICE, St. LOUIS, Mo., {

February 11, 1880.

I have tried the PEN, and it gives great satisfaction. It is worth twice the price asked. It is valuable for headings, etc.

"THE GREAT ROCK ISLAND ROUTE"

Calls your attention to the following REASONS WHY, if about to make a Journey to the GREAT WEST, you should travel over it:

As nearly absolute safety as is possible to be attained. Sure connections in UNION DEPOTS, at all important points. No change of cars between CHICAGO, KANSAS CITY, LEAVENWORTH, ATCHISON or COUNCIL BLUFFS. Quick journeys because carried on Fast Express Trains. Day cars that are not only artistically decorated, but furnished with seats that admit of ease and comfort. Sleeping cars that permit quiet rest in home-like beds. Dining cars that are used only for eating purposes, and in which the best of meals are served for the reasonable sum of seventy-five cents each. A journey that furnishes the finest views of the fertile farms and pretty cities of Illinois, Iowa and Missouri, and is afterwards remembered as one of the pleasant incidents of life. You arrive at destination rested, not weary; clean, not dirty; calm, not angry. In brief, you get the maximum of comfort at a minimum of cost.

That the unremitting care of the Chicago, Rock Island & Pacific Railway for the comfort of its patrons is appreciated, is attested by its constantly increasing business, and the fact that it is the favorite route with delegates and visitors to the great assemblages, political, religious, educational and benevolent, that assemble from time to time in the great cities of the United States, as well as tourists who seek the pleasantest lines of travel while en route to behold the wonderful scenes of Colorado, the Yellowstone and Yosemite. To accommodate those who desire to visit Colorado for health, pleasure or business, in the most auspicious time of the year, the Summer season and months of September and October, the Company every year puts on sale, May 1st, at all coupon ticket offices in the United States and Canada, round trip tickets to

DENVER, COLORADO SPRINGS AND PUEBLO,

at reduced rates, good returning, until October 31st. Also to San Francisco, for parties of ten or more, good for ninety days, at great reduction from regular fares.

REMEMBER, this is the most direct route for all points WEST and SOUTHWEST. For further information, time-tables, maps or folders, call upon or address

R. R. CABLE,

Vice-Pres't and Gen'l Man'gr, Chicago.

CARD FANCIES.

J. H. Hamburger has introduced the newest thing in the fancy card line. It consists of natural birds of the gallatory and natatory species on panels which are illuminated by exquisite hand paintings. The house shows several new designs in fan cards, which can be had either fringed or plain. A new card, which is known as No. 881, represents a rose in a vase, and is said to be the finest card in the market. A line of plate-shaped cards, in imitation of Sevres china, Delft and Chelsea ware and of Japanese cloisonné, is also shown. Noteworthy among the latest novelties in birthday cards are two designs, each of which shows a baby's head elegantly painted. Particular attention is invited to card No. 1,882, which is in four designs, each, viz., wild rose, hawthorn, pond lily, and forget-me-not. Over five hundred and fifty new series are shown by the house.

Obpacher Brothers, New York, have got out something new in fringed cards, the fringes being wide and in variegated colors, and the tassels of new design and much handsomer than those heretofore shown. Among other new cards, the "Angel" card, No. 430, is remarkable. It represents an angel soaring through the starry firmament and casting a refulgent light over the shadows of the sky. No. 535 comprises a charming series of children's heads. Other cards have illustrations of gnomes, comic subjects of an entirely unobjectionable character, new Christmas designs, calendars with floral borders and showing the changes of the moon. Landscape cards in imitation of engraved subjects and with delicate floral borders are also very attractive. One feature is the No. 444 card, which consists of a series of Roman Catholic cards illustrating various "stations." In birthday cards the firm shows a large and pleasing variety. Nos. 442 and 450 are "book" cards; No. 556 is a clever fac-simile of a slate with scenes and childish pictures, &c., suggestive of youthful art aspirations and intellectual beginnings. Menu cards are also very well designed. Cards Nos. 461 and 455 are prettily ornamented plates; No. 452 comprises six cabinet size floral cards, very delicate in character; No. 456, six crosses, cabinet size, with entirely new designs of fine execution.

L. Prang & Co.'s new birthday cards include this season a large variety of very fine goods. No. 42 is a large card by Elihu Vedder, and called the "Goddess of Fortune." The goddess is represented with the wheel of fortune, a handsome back enhancing the appearance of the card. No. 43 is a medium-sized square card, in fine floral designs on drab ground. No. 44 consists of twelve designs by Church, humorously illustrating the twelve months. No. 45 is a handsome, large, panel-shaped card in four designs, showing a combination of winter landscapes, plaques and flowers, with a very ornamental back. An elegant card is shown in No. 46, which, on a delicate background, presents four designs of flowers, vases and baskets. The combination is a very good one, and particular attention is invited to its rare excellence. No. 47 F shows three designs of an open fan, handsomely lithographed and ornamented with fringe and tassels, two designs being so united as to show a picture on either side. No. 48 shows four horseshoe designs, with floral ornamentation. No. 49 is a large panel-shaped card, with four designs of bouquets, rich and tasty, with delicate back. There is much demand for the firm's birth announcement and Thanksgiving cards, and early orders are requested to insure prompt delivery. Of larger pictures the house has just published two very fine chromos,

Aug. Leonhardi's (Dresden) Celebrated Alizarine Writing and Copying Ink.

THIS Ink combines the qualities of a Writing and Copying Ink in a manner unsurpassed by any other make in the market. As a Copying Ink it will make a distinct copy even several days after, and if required two clear copies can be taken. As a Writing Ink it excels for its intense blackness. It never fades, nor does it blur. It is used in all Government Offices on the Continent of Europe. We are enabled to quote this Ink far below the prices of other Copying Inks.

Publishers of SOUVENIR ALBUMS, of all the larger cities of the Union, of Places of Summer Resort, and of Celebrated Sceneries.

Catalogues furnished on application.

1125 CHESTNUT ST., PHILADELPHIA.

representing pelargoniums and orchids; also two pictures of the originals, by Thomas Moran, called "On the Lookout" and "Cliffs of the Upper Colorado River." These are so well reproduced that it is difficult to distinguish the copy from the original.

Milton Bradley & Co. publish this season a line of new box games, which, while very pleasing and interesting, are also elegant in their exterior. "Poetical Conversation Cards" and "Excursion to Coney Island" have artistic labels in neutral tints, producing very beautiful effects and quite new. The latter is a reading game, giving an unlimited number of versions of a visit to Coney Island by a happy crowd, and among other things depicts some of the experiences in taking the boat in New York before the new pier and line of river boats were built. The "Visit to the Gypsies" is new in method and combines fortune telling with the reading games in a pleasing manner, affording lots of fun to the young people, the quotations being from the poets. The game of "Patience" is one of the best for every-day playing, as it is a solitaire and also equally adapted to a company of two or a half-dozen. It is said to quicken the perceptions wonderfully and is within the capacity of a child seven years old, while it is most fascinating for adults. All these, with "Old Maid Improved," new line of "Jack Straws," and a large number of others, are well adapted to the book and stationery trade and afford a good margin of profit.

The Ogden Herald says, that a new and remarkable repository of remains of extinct species was recently discovered in the southwestern part of Sweetwater county, on Green River. The region is known as "bad lands," having a close resemblance to the bad lands of Nebraska, that are famous for the relics of monsters of yesteryear. A gentleman who has just returned from the newly discovered field of wonder says that it abounds with petrifications and fossils, and in some places they are heaped up in mounds. He found therein a skeleton, almost perfect, that was twenty-two feet in length and measured five and a half feet across the ribs, resembling the illustrations of an ichthyosaurus. Fossil turtles, frogs, ammonite, and immense bones, large teeth, petrified wood, &c., bestrew the ground, making it a valuable field for the operations of the geologist.

The best sponges are the American sponges. They come from the West Indies and the extremity of Florida. But they are not sufficient to supply the United States alone, and so sponges are imported from the Mediterranean also. Many of the West Indian sponges are exported from New York to London, Paris, Germany and Holland. They are especially useful for washing carriages and for similar purposes. Common bath sponges are usually from the Mediterranean, and Syrian sponges are the kind used in hospitals and by surgeons. The Florida supply is growing smaller year by year, and prices are accordingly higher. European sponges are also scarce this year.

It is reported that a syndicate has been formed by three paper houses in this city and a well known Eastern paper manufacturing concern, to float one of our city publishing houses, which is said to owe upward of \$75,000. This syndicate, formed of strong parties, it is thought, will be able to carry the sinking firm through its financial difficulties.

THE MANUFACTURE OF LACQUER IN JAPAN.

Sir E. J. Reed, after a visit to Japan, describes the method of making lacquer in that country as follows:

The Japanese lacquer is laid usually upon articles of wood, and not upon articles of *papier-maché*, as many suppose. It is produced from the sap of the *Rhus vernicifera*, which is taken in its natural state into a large wooden tub or vat, and then stirred in the sun with a large spatula, until its excess of water is evaporated. In some cases the varnish so produced undergoes careful straining; in others it is mixed with sulphate of iron, with vermilion, with red oxide of iron, or with indigo; oil is sometimes employed, likewise powdered stone. Into some inferior varnishes a sort of paste made of rice enters in considerable proportion. There are a dozen methods of employing the various varnishes, differing according to the nature of the object to be produced. In the best lacquer, numerous coatings are applied, dried and polished successively. The first polishings are done with a stone named *tsu shimada* (suitable for hones), the latter by means of water, and a charcoal made from *Andromeda ovalifolia*, and the last with pulverized stag's horn. All the polishings are effected by the hand. When gold is used in smooth-surface lacquers, where it is not to be in relief, the process is as follows: The design to be produced is traced on a leaf of paper, which is then reversed, and has repeated upon the opposite side of it the outlines and other features of the design in a mixture of varnish and vermilion, softened over a mild fire. This side of the paper is then applied to the lacquer to be decorated, and the paper is rubbed and pressed upon it by means of a small spatula of bamboo. The transfer of the pattern from the paper to the lacquered surface is further assisted by gently beating the paper down with a small silken bag containing powdered stone. The paper is then peeled off, and can be used again if desired. The slight relief of the pattern so produced upon the lacquer is rubbed down with carbon polish, and the design, and that alone, is then lightly covered with a thin layer of quickly drying varnish. Gold, in powder, is then applied to the moist surface by means of a camel-hair pencil if the gold powder be fine, and by means of a small tube if it be comparatively coarse and heavy. The article is then dried for a day in a warm closet, such as is used for drying the ordinary lacquer varnish. The design is next lightly coated with a very thin layer of varnish, applied by means of paper steeped in it and passed very delicately over the object, which is then redried in a closet. The object receives further extremely light coatings of varnish and subsequent polishings before it is completed. Silver is applied in powder in the same manner. When gold or silver is applied to designs in relief, the details of the process vary considerably, but the application of the metals is effected in substantially the same manner. When gold or silver is applied in leaf, it is laid upon the varnished surface prepared for it, and dealt with in the usual manner, the varnish acting as a "size" for the metallic leaf. When mother-of-pearl is used as an inkrustation for lacquer, it is laid on during the varnishing processes, earlier if it be thick than if it be thin, and the final polishing is proceeded with until the pearl is brought to the surface.

Excursion tickets, good for thirty days from New York to the Atlanta International Exposition, will be sold during October, November and December for \$36.

The attention of the trade is directed to our Fine Manilla Writing Papers and Copying Books. A comparison in price and quality with other goods will convince any purchaser that it will pay to buy of us. Samples and prices on application.

A BRITISH VIEW OF IT.

Under the heading, "What American Paper Makers Intend Doing," *Paper Making* (London), of September 1, says:

Whatever else may be said of Americans, nobody will deny their enterprise and great energy. They are a nation which has accomplished much, though in a way not always considered acceptable by many of us in our steady going island. America, however, is a rapidly rising country, and is, as it were, but beginning to come out of a shell. They have not had a century of commercial fame and success as we have. Their institutions and manners are new, and appear strange to our conservative and highly proper sense; but the results of their movements are equally great as oftentimes unpleasant. Competition from the United States has been so severe in some cases as to paralyze our own trade, and has certainly reduced prices at least 50 per cent., if not more.

Bearing this in mind, our paper makers will do well to carefully study the doings of American competitors. We give elsewhere a tolerably full account of the Saratoga meeting, and it will be seen that American paper makers are about to attack our trade, not here at home, but in the colonies. They intend competing with us abroad, and argue that where we send our paper, thither they can send theirs, and at cheaper prices. They, in other words, threaten to do one of two things, viz., to take away our trade or reduce prices considerably. In considering this condition of things, don't let us be foolish, and content ourselves with saying: "It is all bosh and moonshine. Nothing but Yankee bluster," &c. Many a march has been stolen upon our trades here by this self-confident folly.

American paper makers are, like our own, a rich trade, and capable of doing what they mean, and meaning what they say. Besides, in this case, they are right. If they want to hurt us, they need not come here. They know it and they confess it. Mr. Miller, who is also a senator in the American Senate, says: "We need not, perhaps, look to Europe for an outlet." He mentions other countries who buy our papers, and he proposes a cool policy of cutting us out.

Let us consider the proposition seriously, and now—not when it is too late. The Americans have over one thousand mills, and can turn out when at full work any reasonable amount of paper, enough to supply their hemisphere. They can turn out cheap paper. Oscar Greenleaf, the president of the Holyoke Paper Company, has been over here, and he told us that news was as cheap in New York as here. There is an idea here that paper is dear over in the States, and that we could supply at any time. It is a pity our paper makers won't examine this point, and disillusionize themselves of this fallacy.

Our great outlet is not merely at home. Swarms of Belgian, German, Austrian, Swedish and other papers, are busy here, cutting prices to shreds, and compelling our mills to work at hair-breadth profits.

In the colonies, through our shipping facilities, we can find a more remunerative outlet, and the Americans—always on the *qui vive* for an opportunity, know this and propose assailing this market. What will be the result? Our home market will remain in its present condition, and our colonial market will be subjected to severe competition, which naturally means lower prices.

Moreover, the Americans are assisted by a powerful trade journal in the New York *Paper Trade Journal*, and Howard Lockwood's exhaustive paper is a systematic plan of attack upon

all our centres of trade. Now, we cannot afford to sit down and look on while our markets are being assailed. Old times have passed away and a new era is opening out, demanding almost furious energy on our part.

We have held our own for a long time. We have been at the head of all nations for years, but we are having to struggle to maintain this position. Other nations are pushing. Look at the foreign papers in our markets. Twenty years ago paper makers would have laughed at the idea of writings at 3½d., or news at 2½d. less 5 per cent. But now these prices are a fact. Is it, then, policy to regard this threatened attack upon our colonial markets with indifference?

We shall be glad to do what we can for the paper trade, in stirring up colonial markets. We have the means to do so, and we intend to promote English, or rather British papers, before all others, and indeed to the exclusion of all others. We would urge upon paper makers the value of stirring themselves. By doing so at once, they can forestall the Americans. So far the journals published in America have achieved much, and have made an impression in our markets.

COPPER.

Everybody knows the weight and value of an ordinary penny-piece, and that it is principally composed of copper; so that if any one were to find a great lump of that metal in the earth, weighing 420 tons, there would be a fine fortune. Such a mass of pure native copper was found in the Minnesota mine in 1857, and it was 45 feet long, 22 feet broad and 8 feet thick. There is a piece of copper in the museum of Lisbon which came from Peru, and it weighs 2,616 pounds; and near New Brunswick, in New Jersey, there was a thin sheet of pure copper found in the rocks which could be traced for several yards. There are some very profitable mines near Lake Superior, between Canada and the United States, which often yield 8,000 tons a year of pure copper, and in 1853 a great lump of copper was found at Keweenaw Point, which weighed 200 tons, and was 40 feet in length. It contained, moreover, much silver, and when the copper was cut and polished it looked very beautiful. In most parts of the world small pieces of pure copper have been found in cracks in the hardest rock, and man, soon after he turned his attention to a civilized life, began to use copper. Then he mixed it with tin and produced weapons of bronze, which were used for a very long period before iron was discovered. The early natives of North America, like all other, first of all used sharpened stones as their knives and spear heads, but they soon began to make use of the yellow metal they found every now and then among the rocks. They even tried to find copper, and obtained it from the mines on Lake Superior, for the present miners come upon the old diggings while working in places where gigantic trees and dense vegetation must have existed for thousands of years. Copper is usually found combined with other substances to form an ore, and this has to be burned and run into shapes before the pure copper is obtained. It is most probable that all copper, and even the great lumps of pure native copper, were once in form of ore, or combined with other substances. Native copper is found close to rocks which are exactly like the lava and slag which are cast out of volcanoes. These rocks were forced into the earth while in a molten state, and intense heat affected the copper ores close by. The substances combined with the copper to form the ore were destroyed by the heat, and the pure metal remained.
